## Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q262-Q267):

### NEW QUESTION # 262

What is the primary objective of identifying vulnerabilities in cybersecurity?

- A. To fix and eliminate weaknesses in a network or system
- B. To develop efficient attack methods.
- C. To enhance the performance of a network or system.
- D. To keep the existence of vulnerabilities hidden from attackers.

**Answer: A**

Explanation:

The primary objective of identifying vulnerabilities in cybersecurity is to identify weaknesses or flaws in a network or system in order to fix and eliminate them. By addressing vulnerabilities, organizations can enhance the security of their networks and systems, reducing the risk of unauthorized access or data breaches.

### NEW QUESTION # 263

What is a key principle of securing data in the cloud?

- A. Limiting access to the cloud from specific IP addresses
- B. Using complex passwords for all cloud users
- C. Implementing strong physical security measures
- D. Encrypting data at rest and in transit

**Answer: D**

Explanation:

Option 1: Incorrect. Implementing strong physical security measures is important, but it is not the key principle of securing data in the cloud.

Option 2: Correct. Encrypting data at rest and in transit is a key principle of securing data in the cloud. This ensures that even if the data is compromised, it cannot be accessed without the decryption key.

Option 3: Incorrect. Using complex passwords is a good security practice, but it is not the key principle of securing data in the cloud.

Option 4: Incorrect. Limiting access to the cloud from specific IP addresses is a security measure, but it is not the key principle of securing data in the cloud.

#### **NEW QUESTION # 264**

Which technology focuses on creating rules and correlation logic to identify security incidents based on collected network data?

- A. Firewall
- B. SOAR (Security Orchestration, Automation, and Response)
- **C. SIEM (Security Information and Event Management)**
- D. IDS (Intrusion Detection System)

**Answer: C**

Explanation:

SIEM (Security Information and Event Management) technology plays a critical role in monitoring network data to identify security incidents. SIEM solutions typically have rule-based engines and correlation logic that analyze the collected data and generate alerts or reports when specific security events or patterns are detected. By using predefined rules and correlation logic, SIEM can help identify potential security incidents and provide insights into the overall security posture of an organization's network.

#### **NEW QUESTION # 265**

Which of the following techniques is commonly used for monitoring security events "as they occur"?

- A. Access control lists (ACL)
- **B. Intrusion detection systems (IDS)**
- C. Vulnerability scanning
- D. Firewall configuration

**Answer: B**

Explanation:

Intrusion detection systems (IDS) are commonly used for monitoring security events in real-time. IDS monitors network traffic and system activity, looking for signs of unauthorized access, malicious activities, or anomalous behavior. When an intrusion is detected, the system generates alerts for immediate action and response.

#### **NEW QUESTION # 266**

Why is it important to maintain the chain of custody when handling digital evidence?

- **A. To prevent unauthorized access or tampering.**
- B. To recover lost or deleted data from the evidence.
- C. To ensure the evidence is stored securely.
- D. To accelerate the analysis of the evidence.

**Answer: A**

Explanation:

Maintaining the chain of custody is crucial to ensure the integrity and admissibility of digital evidence in a legal case. It helps establish that the evidence has not been tampered with or accessed by unauthorized individuals, which ensures its reliability and credibility. By maintaining a strict chain of custody, any potential challenges to the evidence's validity can be effectively addressed by demonstrating that it has been handled in a controlled and secure manner.
