সমাজের কাজ কেবল মানুষকে টিকে থাকার সুবিধা দেওয়া নয়, মানুষকে বড় করে তোলা, বিকশিত জীবনের জন্য মানুষের জীবনে আগ্রহ জাগিয়ে দেওয়া। স্বল্পপ্রাণ স্থূলবুদ্ধি ও জবরদস্তিরিয় মানুষে সংসার পরিপূর্ণ। তাদের কাজ নিজের জীবনকে সার্থক ও সুন্দর করে তোলা নয়, অপরের সার্থকতার পথে অরায় সৃষ্টি করা। প্রেম ও সৌন্দর্যের স্পর্শ লাভ করেন বলে এরা নিষ্ঠুর ও বিকৃতবুদ্ধি। এদের একমাত্র দেবতা অহংকার। তারই চরমে তারা নিবেদিতপ্রাণ। ব্যক্তিগত অহংকার, পারিবারিক অহংকার, জাতির অহংকার ও ধর্মগত অহংকার- এ সবার লাল নিশান ওড়ানোই এদের কাজ। মাঝে মাঝে মানব-প্রেমের কথাও তারা বলে। কিন্তু তাতে বেশা ধরে না, মনে হয় তা আত্মরিকতাহীন ও উপলব্ধিহীন বুলি মাত্র।

Splunk Core Certified Power User Exam Sample Questions (Q190-Q195):

NEW QUESTION # 190

How could the following syntax for the chart command be rewritten to remove the OTHER category? (select all that apply)

- A. | chart count over CurrentStanding by Action limit=10
- B. | chart count over CurrentStanding by Action limit=10 useother=f
- C. | chart count over CurrentStanding by Action useother=f
- D. | chart count over CurrentStanding by Action usenull=f useother=t

Answer: B,C

Explanation:

In Splunk, when using the chart command, the useother parameter can be set to false (f) to remove the 'OTHER' category, which is a bucket that Splunk uses to aggregate low-cardinality groups into a single group to simplify visualization. Here's how the options break down:

A: | chart count over CurrentStanding by Action useother=f This command correctly sets the useother parameter to false, which would prevent the 'OTHER' category from being displayed in the resulting visualization.

B: | chart count over CurrentStanding by Action usenull=f useother=f This command has useother set to true (t), which means the 'OTHER' category would still be included, so this is not a correct option.

C: | chart count over CurrentStanding by Action limit=10 useother=f Similar to option A, this command also sets useother to false, additionally imposing a limit to the top 10 results, which is a way to control the granularity of the chart but also to remove the 'OTHER' category.

D: | chart count over CurrentStanding by Action limit=10 This command has a syntax error (limit=10 should be limit=10) and does not include the useother=f clause. Therefore, it would not remove the 'OTHER' category, making it incorrect.

The correct answers to rewrite the syntax to remove the 'OTHER' category are options A and C, which explicitly set useother=f.

NEW QUESTION # 191

There are several ways to access the field extractor. Which option automatically identifies data type, source type, and sample event?

- A. Event Actions > Extract Fields
- B. Settings > Field Extractions > Open Field Extraction
- C. Fields sidebar > Extract New Field
- D. Settings > Field Extractions > New Field Extraction

Answer: C

Explanation:

There are several ways to access the field extractor. The option that automatically identifies data type, source type, and sample event is Fields sidebar > Extract New Field. The field extractor is a tool that helps you extract fields from your data using delimiters or regular expressions. The field extractor can generate a regex for you based on your selection of sample values or you can enter your own regex in the field extractor. The field extractor can be accessed by using various methods, such as:

Fields sidebar > Extract New Field: This is the easiest way to access the field extractor. The fields sidebar is a panel that shows all available fields for your data and their values. When you click on Extract New Field in the fields sidebar, Splunk will automatically identify the data type, source type, and sample event for your data based on your current search criteria. You can then use the field extractor to select sample values and generate a regex for your new field.

Event Actions > Extract Fields: This is another way to access the field extractor. Event actions are actions that you can perform on individual events in your search results, such as viewing event details, adding to report, adding to dashboard, etc. When you click on Extract Fields in the event actions menu, Splunk will use the current event as the sample event for your data and ask you to select the source type and data type for your data. You can then use the field extractor to select sample values and generate a regex for your new field.

Settings > Field Extractions > New Field Extraction: This is a more advanced way to access the field extractor. Settings is a menu that allows you to configure various aspects of Splunk, such as indexes, inputs, outputs, users, roles, apps, etc. When you click on New Field Extraction in the Settings menu, Splunk will ask you to enter all the details for your new field extraction manually, such as app context, name, source type, data type, sample event, regex, etc. You can then use the field extractor to verify or modify your regex for your new field.

NEW QUESTION # 192

When using multiple expressions in a single eval command, which delimiter is used?

- A. , (comma)
- B. / (forward slash)
- C. : (colon)
- D. | (pipe)

Answer: A

Explanation:

When using multiple expressions in a single eval command in Splunk, the delimiter used is a comma (.). This allows for the execution of multiple operations within a single eval statement, separating each operation clearly.

Reference:

Splunk Docs: Eval command

Splunk Answers: Multiple expressions in eval

NEW QUESTION # 193

Using the export function, you can export search results as _____. (Select all that apply)

- A. Html
- B. Json
- C. Xml
- D. A php file

Answer: B,C

Explanation:

Using the export function, you can export search results as XML or JSON2. The export function allows you to save your search results in a structured format that can be used by other applications or tools. You can use the output_mode parameter to specify whether you want to export your results as XML or JSON2. Therefore, options A and B are correct, while options C and D are incorrect because they are not formats that you can export your search results as.

NEW QUESTION # 194

Which of the following Statements about macros is true? (select all that apply)

- A. Arguments are defined when the macro is created.
- B. Argument values are used to resolve the search string when the macro is created.
- C. Arguments are defined at execution time.
- D. Argument values are used to resolve the search string at execution time.

Answer: C,D
