The Salesforce Platform-App-Builder Certification is highly valued by employers and can open up new career opportunities in the field of Salesforce development.

## Salesforce Certified Platform App Builder Sample Questions (Q104-Q109):

### NEW QUESTION # 104

Sales manager at universal containers would like to standardize what information sales rep are gathering. Sales rep want recommendations, sales strategies and to know what key fields need to be completed at each step of the sales process on the opportunity record. What feature should an app builder use to provide this functionality?

- A. Global Action
- **B. Path**
- C. Workflow
- D. Chatter feed

**Answer: B**

Explanation:

The app builder should use the Path feature to provide the functionality that the VP of Sales wants. The Path feature allows an app builder to create a visual representation of the stages in a business process, such as the Opportunity sales process. The app builder can also add key fields, guidance, and resources for each stage to help sales reps gather information and complete tasks. Option A, C, and D are not features that can provide this functionality.

### NEW QUESTION # 105

An app builder installed a custom Lightning component from AppExchange and has deployed My Domain. What should be done next in order to configure the component for use in a record page?

- A. Edit a record page using the Page Layout editor > Drag the Visualforce component onto the page.
- B. Edit a record page using the Page Layout editor > Drag the component onto the page.
- **C. Edit a record page using Lightning App Builder > Drag the component onto the page.**
- D. Edit a record page using App Manager > Drag the component onto the page.

**Answer: C**

Explanation:

To configure a custom Lightning component for use in a record page, the app builder needs to edit a record page using the Lightning App Builder and drag the component onto the page. The Page Layout editor and the App Manager are not used for this purpose.

### NEW QUESTION # 106

You are building a project mgmt app. According to the design given to you, a project must store info regarding the various functional modules under it. Each functional module must store info regarding responsibility assigned to each developer. Info about the responsibility must have info about the due date and status.

What could be the most optimal model to achieve this?

- A. Create Project and Module objects then Responsibility as a junction object.
- B. Create a Project then add Tasks to it. Define Modules as a field on Task.

- C. Create a Project object then Modules as a child object. Add Tasks to Modules.
- D. Create Project, Module, Responsibility as parent, child and grandchild objects.

**Answer: C**

#### NEW QUESTION # 107

Which two statements are true about an External ID field? Choose 2 answers

- A. The field must be unique since duplicates are NOT allowed within Salesforce.
- B. The field can be unique based on case-sensitive or case-insensitive values.
- C. The field must contain at least one number and at least one letter.
- D. The field can be used to contain unique record identifiers from a system outside of Salesforce.

**Answer: B,D**

#### NEW QUESTION # 108

After utilizing the Lightning Object Creator to create a new object, its fields, and to insert all of the data, an app builder now needs to set up the Lightning Record Page.

Which component should the app builder have on their Lightning Record Page to see all of the fields from the page layout?

- A. Recommendations
- B. Record Detail
- C. Path
- D. Highlights Panel

**Answer: B**

Explanation:

For an app builder who needs to ensure all fields from the page layout are visible on a Lightning Record Page after using the Lightning Object Creator, the correct component to use is:

\* Record Detail (C). The Record Detail component automatically displays all fields that are included on the assigned page layout for the object. It is designed to reflect the layout configuration and is the simplest way to ensure all fields are presented as configured in the layout editor.

Highlights Panel (A) is used primarily to display key fields at the top of the record page, providing a summary view rather than full field visibility. Recommendations (B) is used for displaying prompts or suggestions and does not display record fields. Path (D) is useful for displaying stages in a process (like sales stages or service processes) and does not show field data directly.
