検証するProject-Management問題トレーニング & 合格スムーズProject-Management関連日本語内容 | 真実的なProject-Managementテスト難易度

Project-Management試験問題のNCARB3つのバージョンを用意して、クライアントが選択して無料でアップデートできるようにします。異なるバージョンは異なる利点を後押しします。ご購入の前に各バージョンの紹介を注意深くお読みください。そして、Project-Management学習教材の言語は理解しやすく、理論と実践の最新の開発状況に従ってProject-Management試験トレントをコンパイルします。Project-Management試験の準備に少しの時間しか必要ありません。そのため、Project-Managementの質問トレントを購入する価値があります。

NCARB Project-Management 認定試験の出題範囲:

トピック	出題範囲
トピック 1	Project Quality Control: This section of the exam measures skills of project managers and covers procedures for ensuring quality and maintaining the Standard of Care throughout the project. It focuses on applying regulatory requirements, reviewing documentation for quality, reducing risks and liabilities, and managing the design process to preserve its objectives
トピック 2	Project Work Planning: This section of the exam measures the skills of architectural associates and covers the development and communication of an effective project work plan. It emphasizes maintaining schedules, setting clear criteria for work planning, and ensuring consistent communication with stakeholders, including owners, contractors, consultants, and internal staff.

トピック 3	Contracts: This section of the exam measures the skills of project managers and covers the analysis of contracts that govern the relationships between architects, owners, contractors, and consultants. It highlights verifying adherence to agreements, interpreting key contractual elements, and ensuring consultant work is properly integrated into the project.
トピック 4	Project Execution: This section of the exam measures skills of architectural associates and covers the management of project execution through administrative procedures rather than design decisions. It addresses evaluating budgets, managing scope changes, preparing project documentation in line with delivery methods, and securing necessary approvals from relevant authorities.
トピック 5	Resource Management: This section of the exam measures the skills of project managers and covers how to determine the right team composition and manage time allocation for successful project delivery. It focuses on evaluating criteria for assembling teams and ensuring resources are properly managed to execute the project within agreed terms.

NCARB ARE 5.0 Project Management (PjM) Exam 認定 Project-Management 試験問題 (Q13-Q18):

質問 # 13

Which preliminary deliverables are usually provided for a schematic phase submission? Check the four that apply.

- A. Floor plans
- B. Cost estimates
- C. Site plan
- D. Finish schedule
- E. Detailed specifications
- F. Elevations and sections

正解: A、B、C、F

解説:

During the Schematic Design (SD) phase, the architect develops preliminary design concepts to establish the general scope, scale, and relationships of the project components. The typical deliverables are conceptual drawings and studies that communicate the design intent clearly but without detailed development.

* Floor plans (A): Basic layouts showing room arrangements and spatial relationships are fundamental schematic deliverables.

* Elevations and sections (B): These help communicate the building's exterior appearance and vertical spatial relationships.

* Site plan (C): Provides context for the building's location, orientation, and relationship to existing site features.

* Cost estimates (E): Early cost estimates are usually prepared to inform budget decisions and feasibility.

Deliverables not typical in the schematic phase:

* Finish schedule (D): This is usually developed later in Design Development or Construction Documents phases when finishes are selected in detail.

* Detailed specifications (F): These are produced during Construction Documents, far beyond schematic design.

Thus, the four preliminary deliverables for schematic phase submissions are floor plans, elevations and sections, site plan, and cost estimates.

質問 # 14

Who is typically responsible for verifying the contractor's schedule of values?

- A. Construction manager
- B. Contractor's project manager
- C. Owner

- D. Architect

正解: D

解説:

The architect typically reviews and verifies the contractor's schedule of values, which breaks down contract costs by work category for payment applications. This review ensures the breakdown aligns with the contract scope and allows for proper evaluation of payment requests. While the contractor prepares it and the construction manager or owner may review, the architect plays a key role in contract administration and cost verification as per ARE 5.0 PjM contract administration topics.

質問 # 15

Which of the following best describes the architect's role in cost estimating during schematic design?

- A. Providing a preliminary opinion of probable construction cost
- B. Verifying contractor bids and change order pricing
- C. Developing a detailed quantity takeoff and vendor pricing
- D. Approving final project budget with the owner

正解: A

解説:

During schematic design, the architect provides a preliminary opinion of probable construction cost (OPCC) based on conceptual design. This estimate is less detailed but important for budgeting and feasibility analysis.

It helps the owner make informed decisions about project scope and design direction early in the process.

Detailed quantity takeoffs and vendor pricing occur later in the design development or construction documents phases. Verifying bids and approving final budgets are responsibilities tied to later stages. The ARE 5.0 PjM exam highlights early-stage cost estimating as a critical tool for scope control and project feasibility.

質問 # 16

Which four factors will most affect the choice of project delivery method? Check the four that apply.

- A. Building code
- B. Owner risk tolerance
- C. Construction cost
- D. Size of architectural firm
- E. Owner capabilities
- F. Project scope

正解: B、C、E、F

解説:

A). Project scope: Impacts complexity and integration needs.

C). Owner capabilities: Determines whether the owner can manage multiple contracts (as in DBB or CM).

E). Risk tolerance: Risk-averse owners may prefer DB or CM-at-risk with cost guarantees.

F). Construction cost: Influences whether fast-tracking or GMP methods are needed.

Incorrect:

B). The firm's size is rarely a determining factor.

D). Code compliance is required in all methods but doesn't drive delivery choice.

質問 # 17

Which scheduling method shows the longest path of dependent activities?

- A. Flowchart
- B. Gantt chart
- C. Critical Path Method (CPM)

- 正解: C

The Critical Path Method (CPM) identifies the longest sequence of dependent tasks that determine the minimum project duration. It highlights critical activities where delays affect the overall schedule. Gantt charts and bar charts are visual scheduling tools but do not calculate critical paths. Flowcharts map processes. CPM is essential in ARE 5.0 PjM for schedule analysis.
