communication with the clients using NFS or SMB protocols. ONTAP software also provides features such as data protection, efficiency, security, and performance for NAS workloads.

6.Which two NetApp products offer hardware encryption? (Choose two.)
A. NetApp Storage Encryption (NSE)
B. NVMe self-encrypting drives (SED)
C. NetApp Aggregate Encryption (NAE)
D. NetApp Volume Encryption (NVE)
Answer: A
Explanation:
NetApp Storage Encryption (NSE) and NVMe self-encrypting drives (SED) are two NetApp products that offer hardware encryption. Hardware encryption is a method of encrypting data at the disk level using a hardware-accelerated mechanism. NSE requires all drives in an HA pair to be purpose-built, self-encrypting drives. These drives perform the data encryption themselves through a hardware-accelerated mechanism. Because of the hardware acceleration, NSE systems usually outperform NVE systems when encrypting data1. NVMe self-encrypting drives (SED) are a type of NSE drives that use the NVMe protocol to provide high performance and low latency. NVMe SEDs are supported on select NetApp AFF systems2.

7.Which NetApp BlueXP product enables a customer to provide read and write access to remote Windows servers from a centralized datastore?
A. BlueXP copy and sync
B. BlueXP edge caching
C. BlueXP tiering
D. Cloud Volumes ONTAP
Answer: B
Explanation:
BlueXP edge caching is a NetApp BlueXP product that enables a customer to provide read and write access to remote Windows servers from a centralized datastore. BlueXP edge caching allows you to cache data from a BlueXP volume or a Cloud Volume ONTAP system on a local Windows server, which improves the performance and availability of your applications. You can also sync the cached data back to the source volume, ensuring data consistency and protection.
