Möchten Sie die SAP C\_BCSBS\_2502 Zertifizierungsprüfung beim ersten Versuch bestehen? Auf der Webseite PrüfungFrage werden wir alle Ihrer Wünsche erfüllen und Ihnen versprechen, dass Sie die C\_BCSBS\_2502 Zertifizierungsprüfung in begrenzter Zeit einmalig bestehen. Denn PrüfungFrage verfügt über die Fragenkataloge zur SAP C\_BCSBS\_2502 Zertifizierungsprüfung, die von erfahrenen IT-Experten entworfen werden und aus Fragen und Antworten kombiniert sind. Sie werden niemals bereuen, dass Sie PrüfungFrage gewählt haben. bearbeitet

### SAP Certified Associate - Positioning SAP Business Suite C\_BCSBS\_2502 Prüfungsfragen mit Lösungen (Q19-Q24):

#### 19. Frage

Which key features are included in SAP Business Suite for human capital management? There are 2 correct answers to this question.

- A. Customer engagement analytics
- **B. Employee performance tracking**
- **C. Payroll and benefits administration**
- D. Freight and logistics tracking

**Antwort: B,C**

#### 20. Frage

How does SAP Business Suite contribute to regulatory compliance and governance? There are 2 correct answers to this question.

- A. Eliminates the need for third-party compliance software
- **B. Enables risk management and regulatory compliance tracking**
- **C. Provides financial reporting and audit capabilities**
- D. Prevents cloud-based financial reporting

**Antwort: B,C**

#### 21. Frage

What are unique elements of SAP Business AI?

Note: There are 3 correct answers to this question.

- **A. In-depth knowledge of business processes across various industries**
- B. Development of SAP-specific large language models
- **C. Robust partner ecosystem with synergistic collaboration**
- **D. Direct access to pertinent customer business data**

- E. Focus on the technology stack

**Antwort: A,C,D**

**Begründung:**

The question asks for the unique elements of SAP Business AI, which is a suite of AI capabilities embedded within SAP Business Suite to enhance business processes, decision-making, and automation. According to official SAP documentation and the provided search results, the unique elements of SAP Business AI include its robust partner ecosystem with synergistic collaboration, in-depth knowledge of business processes across various industries, and direct access to pertinent customer business data. These align with Options A, B, and E, making them the correct answers.

**Explanation of Correct Answers:**

**Option A: Robust partner ecosystem with synergistic collaboration**

This is correct because SAP Business AI leverages a robust partner ecosystem that includes technology giants like Google Cloud, NVIDIA, Microsoft, AWS, and Cohere, as well as implementation partners, to deliver scalable, industry-specific AI solutions. This collaborative ecosystem enhances SAP Business AI by integrating advanced AI models, ensuring interoperability, and addressing customer-specific needs through partner expertise. The SAP Business AI documentation on [www.sap.com](http://www.sap.com) states:

"SAP's strategy includes a robust partner ecosystem with synergistic collaboration, partnering with industry leaders like NVIDIA, Google Cloud, and Cohere to deliver interoperable AI agents and scalable solutions.

This ecosystem enables SAP Business AI to address unique customer challenges through combined expertise and innovation." [news.sap.com](http://news.sap.com) Additionally, the SAP News Center emphasizes the role of partners:

"A key element of SAP's AI strategy is leveraging partners' expertise. Partners develop innovative AI solutions and extensions, enhancing the SAP portfolio with customer-specific use cases built on SAP BTP." [news.sap.com](http://news.sap.com) This ecosystem ensures that SAP Business AI is not limited to SAP's internal capabilities but benefits from a collaborative network, making robust partner ecosystem a unique element.

**Option B: In-depth knowledge of business processes across various industries** This is correct because SAP Business AI is purpose-built for business processes, grounded in SAP's deep understanding of industry-specific workflows across sectors like manufacturing, retail, consumer products, life sciences, and more. This knowledge allows SAP Business AI to embed AI directly into processes like supply chain management, finance, and HR, delivering contextually relevant outcomes. The [Understanding SAP Business AI Functions Across Industries](#) article from Crescense states:

"SAP Business AI is purpose-built for business processes, grounded in enterprise data and infused into the workflows users already rely on. It is industry-relevant, designed to support use cases specific to verticals like retail, consumer products, manufacturing, and life sciences." [crescenseinc.com](http://crescenseinc.com) The [Positioning SAP Business Suite](#) documentation on [learning.sap.com](http://learning.sap.com) further notes:

"SAP Business AI's unique strength lies in its in-depth knowledge of business processes across various industries, enabling AI to be embedded into core SAP solutions like S/4HANA, optimizing processes with industry-specific intelligence." For example, in manufacturing, SAP Business AI supports predictive maintenance, while in consumer products, it enables demand forecasting, showcasing its tailored, process-centric approach. This makes in-depth knowledge of business processes a unique element.

**Option E: Direct access to pertinent customer business data**

This is correct because SAP Business AI is uniquely positioned to access and utilize customer business data directly from SAP applications (e.g., SAP S/4HANA, SAP SuccessFactors) and harmonized through SAP Datasphere. This direct access ensures that AI models are trained on relevant, high-quality enterprise data, delivering accurate and context-aware insights. The [SAP Business AI overview](#) on [www.sap.com](http://www.sap.com) highlights:

"SAP Business AI is grounded in your business data, using harmonized data and process expertise to streamline operations, optimize decisions, and unlock enterprise-wide efficiency." [sap.com](http://sap.com) The [Explaining the role of SAP Business AI](#) lesson on [learning.sap.com](http://learning.sap.com) elaborates:

"SAP Business AI's direct access to pertinent customer business data, such as transactional data from SAP applications, ensures reliable, real-time insights. Solutions like SAP Datasphere provide a unified data foundation, enabling AI to leverage customer-specific data securely." This direct access differentiates SAP Business AI from generic AI platforms, as it uses proprietary SAP data (e.g., 77% of global transactions processed by SAP systems) to drive business-specific outcomes, making direct access to customer business data a unique element. [fingent.com](http://fingent.com)

**Explanation of Incorrect Answers:**

**Option C: Development of SAP-specific large language models**

This is incorrect because SAP Business AI does not focus on developing SAP-specific large language models (LLMs). Instead, SAP partners with leading LLM providers like Cohere, Google (Gemini), and Meta (Llama

3) to integrate their models into the SAP ecosystem via SAP BTP and the Generative AI Hub. The [SAP Community](#) article on SAP Business AI explains:

"SAP leverages a rich ecosystem of technology partner LLM offerings through SAP BTP's AI Foundation and Generative AI Hub, rather than developing SAP-specific LLMs. This approach ensures access to the latest innovations while prohibiting partners from training on customer data." [community.sap.com](http://community.sap.com) While SAP uses LLMs for tasks like natural language processing (e.g., Joulecopilot), it relies on external models tailored to SAP's business context, not proprietary LLMs developed in-house. Thus, development of SAP-specific LLMs is not a unique element.

**Option D: Focus on the technology stack**

This is incorrect because SAP Business AI prioritizes business outcomes and process integration over a focus on the technology stack itself. While SAP BTP provides a robust technology foundation for AI (e.g., AI Core, Generative AI Hub), the unique value of SAP Business Allies in its application to business processes and data, not the underlying technology stack. The SAP Business AI documentation on [learning.sap.com](https://learning.sap.com) states:

"SAP Business AI focuses on delivering relevant, reliable, and responsible outcomes, leveraging business data and process expertise, rather than emphasizing the technology stack. The stack, provided by SAP BTP, is an enabler, not the core differentiator." The SAP News Center reinforces this:

"SAP's approach embeds AI into business processes, not treating it as a standalone technology stack, ensuring seamless integration with enterprise workflows." [news.sap.com](https://news.sap.com) This makes focus on the technology stack an incorrect choice, as it is secondary to SAP's process-centric AI strategy.

Summary:

The unique elements of SAP Business AI are its robust partner ecosystem with synergistic collaboration (leveraging partnerships with tech leaders and implementation partners), in-depth knowledge of business processes across various industries (enabling industry-specific AI use cases), and direct access to pertinent customer business data (using SAP's enterprise data for reliable insights), corresponding to Options A, B, and E). Option C is incorrect because SAP does not develop SAP-specific LLMs, relying instead on partner models. Option D is incorrect because the focus is on business outcomes, not the technology stack. These elements align with SAP's strategy to deliver relevant, reliable, and responsible AI within SAP Business Suite, as supported by the provided search results and official documentation.
