

# Hot HP HPE7-J01 Reliable Exam Sample Carefully Researched by HP Experienced Trainers

P.S. Free & New HPE7-J01 dumps are available on Google Drive shared by VCEEngine: <https://drive.google.com/open?id=1Vn9CqWrH-0Z1TUttclhCecY-ULelQ8S5>

By taking a HPE7-J01 practice exam, you can find out what you're good at. HPE7-J01 exam preparation software is the best way to prepare for your HPE7-J01 certification exam. With the HPE7-J01 list of questions, you can brush up on your skills and knowledge. With VCEEngine, you'll access a lot of HPE7-J01 Practice Questions, detailed explanations, and personalized feedback. And because it's all online, you can study anywhere, anytime. The Advanced HPE Storage Architect Solutions Written Exam (HPE7-J01) practice exam consists of questions from a pool of questions.

Getting a HP HPE7-J01 trusted certification is a way to prove your expertise and show you that you are ready all the time to take the additional responsibilities. The Advanced HPE Storage Architect Solutions Written Exam HPE7-J01 certification exam assists you to climb the corporate ladder easily and helps you to achieve your professional career objectives. With the Advanced HPE Storage Architect Solutions Written Exam HPE7-J01 certification exam you can get industry prestige and a significant competitive advantage. To attain all these you just need to enroll in the HP HPE7-J01 Certification Exam and put in all your efforts and prepare well to crack the Advanced HPE Storage Architect Solutions Written Exam HPE7-J01 exam easily. For the perfect and instant Advanced HPE Storage Architect Solutions Written Exam HPE7-J01 exam preparation, you can get help from HP HPE7-J01 Exam Questions. The VCEEngine HPE7-J01 exam questions are real and will entirely assist you in HPE7-J01 exam preparation and you can easily pass the final Advanced HPE Storage Architect Solutions Written Exam HPE7-J01 certification exam.

# 2026 HPE7-J01 Reliable Exam Sample 100% Pass | High Pass-Rate HP Dumps Advanced HPE Storage Architect Solutions Written Exam Questions Pass for sure

Passing an exam requires diligent practice, and using the right study HP Certification Exams material is crucial for optimal performance. With this in mind, VCEngine has introduced a range of innovative HPE7-J01 Practice Test formats to help candidates prepare for their HPE7-J01.

## HP Advanced HPE Storage Architect Solutions Written Exam Sample Questions (Q16-Q21):

### NEW QUESTION # 16

A customer has a diverse NoSQL big data and data analytics workload implementation. This workload runs on bare-metal servers to achieve the most efficient performance. The customer requires a new storage solution to meet their growing data needs. Which solution will be best for the customer?

- A. HPE GreenLake for Private Business Cloud Edition (PBCE)
- B. HPE Alletra dHCI
- C. HPE SimpliVity
- **D. HPE Alletra Storage Server 4110**

**Answer: D**

Explanation:

For workloads like NoSQL databases (e.g., MongoDB, Cassandra), Big Data analytics (e.g., Hadoop, Spark), and high-throughput data lakes, the primary performance bottleneck is often the latency and bandwidth between the compute and the storage media. When a customer specifies they are running on bare-metal servers to achieve "most efficient performance," they are looking for a solution that minimizes the overhead of hypervisors and provides direct, high-speed access to storage.

The HPE Alletra Storage Server 4000 series, and specifically the Alletra 4110, is purposefully engineered for this "Data-First" server-based storage market. The Alletra 4110 is a 1U, all-NVMe ultra-dense storage server that supports dual 4th or 5th Gen Intel Xeon Scalable processors and PCIe Gen5 throughput. Unlike traditional storage arrays that connect via a SAN, the Alletra 4110 functions as high-performance Software-Defined Storage (SDS) infrastructure. It is designed to run the application and the data storage on the same high-density nodes, or to act as a high-speed storage tier for bare-metal clusters.

Other options are less suitable for this specific "bare-metal NoSQL" requirement:

\* HPE SimpliVity (B) is a Hyperconverged Infrastructure (HCI) solution that is inherently tied to a hypervisor (VMware or Hyper-V), which contradicts the customer's bare-metal requirement.

\* HPE Alletra dHCI (C) is a disaggregated HCI solution that automates a SAN environment but is also centered around VMware virtualization.

\* HPE GreenLake for Private Cloud Business Edition (A) is a service-oriented offering primarily for managing virtualized private clouds.

The Alletra 4110 provides the massive I/O throughput (up to 315 GB/s of PCIe Gen5 bandwidth to SSDs) and the low-latency NVMe performance that NoSQL and analytics workloads demand, making it the superior architectural choice for bare-metal, data-intensive environments.

### NEW QUESTION # 17

A company bought an HPE StoreOnce solution as part of its data protection solution. The company has various Oracle installations that need to be backed up to StoreOnce. How should the company's administrator best implement the data protection strategy within the HPE StoreOnce user interface (UI)?

- A. From the System Dashboard, click Databases, click Create Library, then specify the Oracle RMAN option and the respective database servers.
- B. From the System Dashboard, click Catalyst Store then specify the Oracle RMAN option and the respective database server.
- **C. Under Data Services, create a Catalyst Store and install the Oracle RMAN plug-in on the Oracle database server.**
- D. Under Data Services, create a Catalyst Store and select the Oracle RMAN option.

**Answer: C**

Explanation:

To protect Oracle databases using HPE StoreOnce, the preferred architectural method is using HPE StoreOnce Catalyst for Oracle RMAN. This integration allows Oracle Database Administrators (DBAs) to manage backups directly from their native RMAN (Recovery Manager) tools while leveraging the deduplication and performance benefits of the StoreOnce appliance.

According to the HPE StoreOnce Catalyst for Oracle RMAN User Guide, the implementation involves two distinct stages: configuration on the StoreOnce appliance and configuration on the database server. First, the storage administrator must log into the StoreOnce UI and, under the Data Services section, navigate to Catalyst. Here, they must create a Catalyst Store. This store acts as the target repository for the backup data.

During creation, the administrator sets permissions (client access) to allow the Oracle server to communicate with this specific store. The second, and crucial, part of the implementation (as noted in Option D) is the installation of the HPE StoreOnce Catalyst Plug-in for Oracle RMAN on the actual Oracle database server. This plug-in provides the "SBT" (System Backup to Tape) interface that RMAN requires to talk to a non-disk/non-tape target.

Without this plug-in installed on the host, RMAN has no way of translating its commands into the Catalyst protocol. Once the plug-in is installed and configured with the StoreOnce details, the DBA can allocate channels to the "SBT\_TAPE" device and run backup jobs directly to the Catalyst Store created in the UI.

Options A, B, and C are incorrect because the StoreOnce UI does not have an "Oracle RMAN option" toggle or "Database Library" creator; the intelligence resides in the combination of the Catalyst Store and the host-side plug-in.

### NEW QUESTION # 18

Which statement is correct concerning the hardware configuration of the HPE Alletra 5000 storage arrays?

- A. The head shelf must have the maximum number of SSD drives installed.
- B. A maximum of six SSD drives are supported across the entire system.
- C. Dual Flash Carriers support both SAS and NVMe SSD drives.
- **D. The SSD drives are installed in slots 22-24.**

**Answer: D**

Explanation:

The HPE Alletra 5000 is a hybrid storage array family built on the legacy of the HPE Nimble Storage Adaptive Flash architecture. Its hardware design is optimized for a mixture of high-capacity Hard Disk Drives (HDDs) and high-performance Solid State Drives (SSDs) used for caching (CASL architecture).

The chassis is a 4U enclosure featuring 24 drive slots. To maintain consistent performance and thermal profiles, the architecture designates specific slots for different media types. According to the HPE Alletra

5000 Installation and Service Guide, the SSDs used for cache are housed in Dual Flash Carriers (DFC).

Each DFC can hold either one or two SSDs, allowing for a total of 3 or 6 cache drives per shelf. These DFCs are specifically required to be installed in the last three slots of the array, which are slots 22, 23, and 24.

The remaining 21 slots (slots 1 through 21) are populated with Large Form Factor (LFF) HDDs for the primary capacity tier.

Option B is incorrect because the system is flexible; it can be configured with a minimum of 3 SSDs (one in each DFC) and does not require the maximum of 6. Option C is incorrect because expansion shelves (like the HPE Alletra 2120) also support their own cache SSDs, meaning the "entire system" capacity for SSDs scales as shelves are added. Option D is incorrect because the Alletra 5000 is a SAS/SATA-based hybrid platform; it does not support NVMe SSDs in its drive slots. NVMe support is reserved for the all-flash Alletra 6000 and

9000 models. Understanding this physical slotting is crucial for site planning and field service operations to ensure the array initializes correctly.

### NEW QUESTION # 19

An administrator has finished installing the Zerto Virtual Manager (ZVM) appliance at a site. The administrator wants to pair the ZVM appliance with a ZVM appliance at another site. Which item is required, besides the Zerto license key, to perform this pairing?

- A. The username and password for vCenter
- B. A pairing asymmetric key
- C. A digital certificate from a trusted PKI infrastructure
- **D. A pairing token**

**Answer: D**

Explanation:

In modern versions of Zerto (specifically starting with Zerto 9.0 and 9.5), the security model for site pairing was significantly enhanced to move away from legacy credential sharing. To establish a secure relationship between two Zerto Virtual Managers

(ZVMs), the administrator must utilize a Pairing Token.

Architecturally, the pairing process works as a "push-pull" handshake. The administrator first logs into the Target (Remote) ZVM- the site that will receive the replication- and navigates to the "Sites" tab. There, they select the option to "Generate Pairing Token." This token is a unique, time-sensitive alphanumeric string that acts as a one-time password for the pairing attempt. Once generated, the administrator copies this token and logs into the Source (Local) ZVM. During the "Pair" wizard, they specify the IP address or FQDN of the remote ZVM and paste the pairing token.

According to the HPE Advanced Storage Solutions implementation guides, this token replaces the need for the source site to know the administrative credentials of the remote vCenter or ZVM, thereby adhering to the principle of least privilege. The token typically has a default expiration (e.g., 48 hours) or expires immediately after a successful pairing session. This ensures that even if a token is intercepted, its window of utility is minimal. Options A and B are incorrect as they represent legacy or non-standard methods; while vCenter credentials are required for the initial installation and registration of the ZVM, they are not the mechanism used for the pairing handshake itself. Option D is incorrect as Zerto manages the underlying encryption keys automatically once the pairing is authenticated via the Pairing Token.

### NEW QUESTION # 20

A customer has an older HPE StoreOnce Gen3 data protection solution. They do not want to upgrade the hardware, but they do want to integrate the existing solution with AWS using HPE Cloud Bank Storage.

Other than HPE Cloud Bank licenses, what must also be included in the bill of materials (BOM)?

- A. Catalyst license
- B. Object store license
- C. RAM upgrade
- D. StoreOnce VSA appliance license

**Answer: C**

Explanation:

HPE Cloud Bank Storage is an extension of the StoreOnce Catalyst protocol that allows for the movement of deduplicated data to object storage in the cloud. When retrofitting this technology onto older HPE StoreOnce Gen3 hardware, there are specific hardware prerequisites that must be satisfied for the feature to be supported and performant.

The primary technical constraint on Gen3 systems (such as the StoreOnce 3100, 3500, 5100, and 5500) is the overhead required to manage the massive metadata associated with cloud-tiering. For the StoreOnce system to effectively index, deduplicate, and track data chunks residing in a remote AWS S3 bucket, it requires additional system memory. According to the HPE StoreOnce QuickSpecs and Configuration Guides, a RAM Upgrade Kit (Memory Upgrade) is a mandatory BOM component for Gen3 systems if the combined local and Cloud Bank Storage capacity will exceed the original system limits or if the Cloud Bank feature is being enabled for the first time on specific entry-to-midrange models.

Without the additional RAM, the Gen3 appliance may lack the necessary resources to run the Catalyst Cloud Bank services alongside local backup operations, leading to severe performance degradation or the inability to create a Cloud Bank store. While a Catalyst license (Option C) is technically required for Cloud Bank to function, most Gen3 customers seeking Cloud Bank already utilize Catalyst; however, the RAM upgrade is the physical hardware prerequisite that is often overlooked in "license-only" upgrades. Options A and B are incorrect as the VSA is a separate virtual product and the "Object store" is a destination, not a StoreOnce hardware component.

### NEW QUESTION # 21

.....

VCEngine is a professional IT certification sites, the certification success rate is 100%. This number is proved by candidates through practice. Because VCEngine has a strong IT team of experts, they are committed to study exam questions and answers, and serve the vital interests of the majority of candidates. They use their own professional mind and experience to meet the needs of the candidates. According to the needs of the candidate, they consider the issue from all angles, and manufacturing applicability exam training materials. This material is HP HPE7-J01 Exam Training materials, which including questions and answers.

**Dumps HPE7-J01 Questions:** <https://www.vceengine.com/HPE7-J01-vce-test-engine.html>

After passing the HPE7-J01 exam you will become a valuable asset for the company you work for or want to work, Most candidates cannot manage their time during the HP HPE7-J01 exam, leave the questions, and fail, HP HPE7-J01 Reliable Exam Sample Therefore, candidates will never risk their precious time and money, HP HPE7-J01 Reliable Exam Sample Tap the "+" symbol in the upper right corner 2.

Different Types of Breakdown Structures, Choosing the Power Supply, After passing the HPE7-J01 exam you will become a valuable asset for the company you work for or want to work.

Most candidates cannot manage their time during the HP HPE7-J01 Exam, leave the questions, and fail, Therefore, candidates will never risk their precious time and money.
