About Microsoft DP-420 Exam, each candidate is very confused. Everyone has their own different ideas. But the same idea is that this is a very difficult exam. We are all aware of Microsoft DP-420 exam is a difficult exam. But as long as we believe PDFVCE, this will not be a problem. PDFVCE's Microsoft DP-420 exam training materials is an essential product for each candidate. It is tailor-made for the candidates who will participate in the exam. You will absolutely pass the exam. If you do not believe, then take a look into the website of PDFVCE. You will be surprised, because its daily purchase rate is the highest. Do not miss it, and add to your shoppingcart quickly.

Microsoft DP-420 certification exam is a comprehensive test designed to evaluate the knowledge and skills of professionals in designing and implementing cloud-native applications using Microsoft Azure Cosmos DB. Designing and Implementing Cloud-Native Applications Using Microsoft Azure Cosmos DB certification is ideal for candidates who are interested in demonstrating their ability to leverage the power of cloud computing to build scalable, reliable, and high-performance applications.

The DP-420 certification exam covers a wide range of topics, including the design and implementation of Azure Cosmos DB solutions, the use of the Azure Cosmos DB API for SQL, MongoDB, Cassandra, and Graph, as well as the integration of Azure Cosmos DB with other Azure services such as Azure Functions and Azure Search. DP-420 Exam also covers the best practices for designing, developing, and maintaining cloud-native applications that are scalable, reliable, and secure.

Microsoft DP-420: Designing and Implementing Cloud-Native Applications Using Microsoft Azure Cosmos DB Exam is a certification exam that measures the candidate's proficiency in developing and implementing cloud-native applications using Microsoft Azure Cosmos DB. DP-420 exam is designed to test the candidate's skills and knowledge in building and managing distributed applications that can scale and perform efficiently in the cloud.

DP-420 Exam Training | DP-420 Interactive Questions

This is a gainful opportunity to choose DP-420 actual exam from our company. They are saleable offerings from our responsible company who dedicated in this line over ten years which helps customers with desirable outcomes with the help of our DP-420 Study Guide. Up to now, there are three versions of DP-420 exam materials for your reference. They are PDF, software and app versions. And we have free demos for you to download before you decide to purchase.

Microsoft Designing and Implementing Cloud-Native Applications Using Microsoft Azure Cosmos DB Sample Questions (Q93-Q98):

NEW QUESTION # 93

You plan to implement con-iot1 and con-iot2.

You need to configure the default Time to Live setting for each container. The solution must meet the IoT telemetry requirements.

What should you configure? To answer, select the appropriate options in the answer NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1 =On (no default)

For con-iot1, you need to configure the default TTL setting to On (no default), which means that items in this container do not expire by default, but you can override the TTL value on a per-item basis. This meets the requirement of retaining all telemetry data unless overridden1.

Box 2 = On (3600 seconds)

For con-iot2, you need to configure the default TTL setting to On (3600 seconds), which means that items in this container will expire 3600 seconds (one hour) after their last modified time. This meets the requirement of deleting all telemetry data older than one hour1.

NEW QUESTION # 94

You have an Azure Cosmos DB container named container1 that has a provisioned throughput and two physical partitions. You monitor the following metrics for container1

* Normalized RU consumption

* The percentage of requests that have an HTTP status code of 429

You need to confirm that container1 is configured to maximize resource utilization.

What are the optimal values for each metric? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 95

You have an Azure Cosmos DB for NoSQL account named account that has the disablekeyBasedletadatwriteAccess property enabled.

You are developing an app named App1 that will be used by a user named DevUser1 to create containers in account1. DevUser1 has a non-privileged user account in the Azure AD tenant.

You need to ensure that DevUser1 can use App1 to create containers in account1.

What should you do? To answer, select the appropriate options in the answer area.

NOTE Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 96

You have a database named db1 in an Azure Cosmos DB for NoSQL account named account1. The db1 database has a manual throughput of 4,000 request units per second (RU/s).

You need to move db1 from manual throughput to autoscale throughput by using the Azure CLI. The solution must provide a minimum of 4,000 RU/s and a maximum of 40,000 RU/s.

How should you complete the CLI statements? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□ Explanation

Migrate

40000

According to the Azure CLI reference , you need to use the `az cosmosdb sql database throughput migrate` command to migrate the throughput of the SQL database between autoscale and manually provisioned. You also need to use the `--throughput-type` parameter to specify the type of throughput to migrate to, and the `--max-throughput` parameter to specify the maximum throughput resource can scale to (RU/s).

To complete the CLI statements, you should replace the missing values with:

`--throughput-type autoscale`

`--max-throughput 40000`

The final command should look like this:

`az cosmosdb sql database throughput migrate \`

`--account-name account1 \`

`--name db1 \`

`--resource-group rg1 \`

`--throughput-type autoscale \`

`--max-throughput 40000`

NEW QUESTION # 97

You have an Azure Synapse Analytics workspace named `workspace1` that contains a server less SQL pool.

You have an Azure Table Storage account that stores operational data.

You need to replace the Table storage account with Azure Cosmos DB for NoSQL. The solution must meet the following requirements:

* Support Queries from the server less SQL pool.

* Only pay for analytical compute when running queries.

* Ensure that analytical processes do

NOTE: affect operational processes.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

□

Answer:

Explanation:

□ Explanation:

□

NEW QUESTION # 98

.....

With our DP-420 pdf torrent, you will minimize your cost on the exam preparation and be ready to pass your DP-420 actual test on your first try. PDFVCE will provide you the easiest and quickest way to get the DP-420 certification without headache. We will offer the update service for one year. In addition, you will instantly download the DP-420 PDF VCE after you complete the payment. With the help of DP-420 study dumps, you can just spend 20-30 hours for the preparation. Then you will be confident in the actual test.
