People are very busy nowadays, so they want to make good use of their lunch time for preparing for their ITIL-4-Practitioner-Deployment-Management exam. If you choose our ITIL-4-Practitioner-Deployment-Management exam question as your study tool, you will not meet the problem. Because the app of our ITIL-4-Practitioner-Deployment-Management exam prep supports practice offline in anytime. If you buy our products, you can also continue your study when you are in an offline state. You will not be affected by the unable state of the whole network. You can choose to use our ITIL-4-Practitioner-Deployment-Management Exam Prep in anytime and anywhere

The prominent benefits of Peoplecert ITIL-4-Practitioner-Deployment-Management certification exam are more career opportunities, updated skills and knowledge, recognition of expertise, and instant rise in salary and promotion in new job roles. To do this you just need to pass the Peoplecert ITIL-4-Practitioner-Deployment-Management Exam. However, to get success in the ITIL-4-Practitioner-Deployment-Management exam is not an easy task, it is a challenging ITIL-4-Practitioner-Deployment-Management exam.

>> Premium ITIL-4-Practitioner-Deployment-Management Exam <<

Pass Guaranteed 2026 Peoplecert Perfect Premium ITIL-4-Practitioner-Deployment-Management Exam

Actually we eliminate the barriers blocking you from our ITIL-4-Practitioner-Deployment-Management practice materials. All types of our ITIL-4-Practitioner-Deployment-Management exam questions are priced favorably on your wishes. Obtaining our ITIL-4-Practitioner-Deployment-Management study guide in the palm of your hand, you can achieve a higher rate of success. Besides, there are free demos for your careful consideration to satisfy individual needs on our ITIL-4-Practitioner-Deployment-Management learning prep. You can free download them to check if it is the exact one that you want.

Peoplecert ITIL 4 Practitioner: Deployment Management Sample Questions (Q14-Q19):

NEW QUESTION # 14

[Integrate Deployment Management with Other Practices]

A large organization wants to manage its IT services by analyzing and improving value streams. It is unsure how to combine value

streams and management practices, such as change enablement and deployment management. What is the CORRECT approach for this organization to take?

- A. Create several value streams that include change enablement, deployment management, and other practices such as continual improvement
- B. Create one combined value stream for change enablement and deployment management
- C. Create a separate value stream for each management practice
- D. Create a single value stream that includes change enablement, deployment management, and other practices such as continual improvement

Answer: A

Explanation:

ITIL 4 emphasizes that value streams are designed to deliver specific outcomes by integrating relevant management practices tailored to the context of services or products. For a large organization, creating several value streams that incorporate practices like change enablement, deployment management, and continual improvement (Option D) is the most effective approach. This allows flexibility to address different services or workflows while ensuring practices are embedded where needed, aligning with ITIL 4's value-driven and context-specific principles.

Option A (Create a separate value stream for each management practice): Incorrect, as this fragments processes and contradicts ITIL 4's holistic approach, where practices work together within value streams to deliver outcomes, not in isolation.

Option B (Create one combined value stream for change enablement and deployment management): Incorrect, as limiting to a single value stream for only two practices may not account for other necessary practices or varying service needs, reducing flexibility.

Option C (Create a single value stream that includes change enablement, deployment management, and other practices such as continual improvement): Incorrect, as a single value stream for all practices may become overly complex and fail to address diverse service requirements in a large organization.

Option D (Create several value streams that include change enablement, deployment management, and other practices such as continual improvement): Correct, as it reflects ITIL 4's guidance to design multiple value streams tailored to specific services or products, integrating relevant practices to optimize value delivery.

NEW QUESTION # 15

[Use Tools and Techniques for Deployment]

Which automation tools should be used to transport and install configuration items into a test environment?

- A. Work planning and prioritization tools
- B. Service configuration management tools
- C. Deployment tools
- D. Environment configuration and management tools

Answer: C

Explanation:

In ITIL 4, deployment tools are specifically designed to automate the transportation and installation of configuration items (CIs) into various environments, including test environments. These tools ensure consistency, repeatability, and efficiency in deployment processes, which are critical for managing CIs during testing phases.

Option A (Deployment tools): Correct, as deployment tools (e.g., Jenkins, Ansible, or Terraform for certain use cases) are tailored for automating the movement and installation of CIs, ensuring they are correctly placed in test environments with minimal manual intervention.

Option B (Environment configuration and management tools): While these tools (e.g., Puppet, Chef) manage environment settings, their primary focus is on configuring and maintaining environments, not transporting or installing CIs, making them less relevant here.

Option C (Work planning and prioritization tools): Tools like Jira or Trello focus on task management and prioritization, not on automating CI deployment, so this option is incorrect.

Option D (Service configuration management tools): These tools manage relationships and data about CIs in a configuration management database (CMDB), not the physical transport or installation of CIs, ruling out this option.

NEW QUESTION # 16

[Measure and Improve Deployment Management]

An organization has an objective to create and use deployment approaches that would fit the needs of the organization and the context. How should the organization assess if this objective is achieved?

- A. By measuring percentage of deployments which did not follow the agreed policies and models
- **B. By asking stakeholders about their satisfaction with deployment lead times**
- C. By looking at the deployment backlog throughput
- D. By analyzing the adherence to deployment schedules

Answer: B

Explanation:

ITIL 4 emphasizes stakeholder satisfaction as a key indicator of whether a practice meets organizational needs and context, as it reflects the value delivered to users and the business. Option B, asking stakeholders about their satisfaction with deployment lead times, directly assesses whether deployment approaches are effective and aligned with expectations, making it the best method to evaluate the objective.

Option A (By looking at the deployment backlog throughput): Incorrect, as throughput measures efficiency but does not directly indicate whether the deployment approach fits the organization's needs or context.

Option B (By asking stakeholders about their satisfaction with deployment lead times): Correct, as stakeholder feedback on lead times reflects whether deployments are timely and valuable, aligning with ITIL 4's focus on value co-creation.

Option C (By measuring the percentage of deployments which did not follow the agreed policies and models): Incorrect, as non-compliance indicates process issues but does not directly assess fit with organizational needs or stakeholder satisfaction.

Option D (By analyzing the adherence to deployment schedules): Incorrect, as schedule adherence measures operational performance, not whether the approach meets broader contextual needs.

NEW QUESTION # 17

[Use Tools and Techniques for Deployment]

Which automation tools should be used to transport and install configuration items into a test environment?

- A. Work planning and prioritization tools
- B. Service configuration management tools
- **C. Deployment tools**
- D. Environment configuration and management tools

Answer: C

NEW QUESTION # 18

[Integrate Deployment Management with Other Practices]

An organization's end users have complained that major software updates happen during work hours, with insufficient notice, and sometimes disrupt users' work for an unacceptably long time. The deployment manager already has close alignment with the release manager and release processes, and has implemented CI/CD. What is the BEST action for the organization to take to ensure new software features are relevant to the end-users?

- **A. Align with the change enablement manager to improve the change planning procedures**
- B. Embed validation and testing within the deployment models
- C. Use infrastructure as code to support the software deployment
- D. Integrate deployment management and configuration management activities to improve version control

Answer: A

Explanation:

The issue involves poor timing, lack of notice, and disruptions from deployments, which points to deficiencies in change planning and communication. ITIL 4 emphasizes aligning deployment with change enablement to ensure changes are scheduled and communicated effectively, addressing user concerns. Option C, aligning with the change enablement manager to improve change planning procedures, directly tackles these issues by ensuring deployments are timed appropriately, users are informed, and disruptions are minimized, while also ensuring feature relevance through better planning.

Option A (Use infrastructure as code to support the software deployment): Incorrect, as IaC improves environment consistency but does not address scheduling, notice, or user relevance issues.

Option B (Embed validation and testing within the deployment models): Incorrect, as while testing improves quality, it does not resolve timing or communication problems affecting users.

Option C (Align with the change enablement manager to improve the change planning procedures): Correct, as change enablement ensures deployments are planned with user needs in mind, including timing, communication, and relevance of features.

Option D (Integrate deployment management and configuration management activities to improve version control): Incorrect, as

version control enhances deployment accuracy but does not address user complaints about timing or disruption.

NEW QUESTION # 19

.....

In order to meet the needs of all customers that pass their exam and get related certification, the experts of our company have designed the updating system for all customers. Our ITIL-4-Practitioner-Deployment-Management exam question will be constantly updated every day. The IT experts of our company will be responsible for checking whether our ITIL-4-Practitioner-Deployment-Management Exam Prep is updated or not. Once our ITIL-4-Practitioner-Deployment-Management test questions are updated, our system will send the message to our customers immediately. If you use our ITIL-4-Practitioner-Deployment-Management exam prep, you will have the opportunity to enjoy our updating system and pass the ITIL-4-Practitioner-Deployment-Management exam.
