PMI Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam Sample Questions (Q101-Q106):

NEW QUESTION # 101

Your team was given a large dataset and has been tasked with organizing the data by type to make better insights from the results. You are facing problems with the approach that the previous project lead used which was a regression algorithm. What type of algorithm is the best approach for this project?

- A. Multiclass Classification
- B. Binary (or Binomial) Classification
- C. Regression
- **D. Clustering**

Answer: D

Explanation:

When the goal is to group or organize unlabeled data into meaningful categories, CPMAI specifies the use of unsupervised clustering algorithms—for example, "if it is determined that an unsupervised clustering algorithm such as K-means will be used, the tool should support such needs". Clustering is the appropriate method for discovering groupings by type.

NEW QUESTION # 102

You are working with a dataset that has a high number of dimensions. You're running into issues because some dimensions don't have enough real examples to properly train the systems for predictable results. What's your best course of action?

- A. Keep going as planned and the problem will eventually correct itself
- B. Try to get additional information from project lead to see how many examples per dimension are needed
- C. Try to improve the quality of your data through more preparation
- **D. Try to get additional data - at least 5 training examples for each dimension in the representation**

Answer: D

Explanation:

CPMAI's Phase II: Data Understanding includes verifying that you have sufficient data volume for each feature to support reliable model training. The learning curve concept underscores that model performance improves with additional training examples. When dimensions are under-represented, the team must source or generate more data—aiming for a minimum number of examples per feature—to avoid underfitting and ensure stable predictions.

NEW QUESTION # 103

Recently, you implemented an augmented intelligence application at work to help employees do their job better. However, employees have been resistant to this change and aren't using the application as expected. What could have been done better to get the team to feel comfortable with this technology and use it? (Select all that apply.)

- **A. Ask end users what information and technology they need to help them do their job better and build the tool to help with these pain points.**
- **B. Have the team that built the technology relay to employees this tool is to augment, and not replace their jobs.**
- **C. Provide training for everyone to have all employees feel more comfortable using the technology even if they aren't using the technology yet.**
- **D. Have upper management relay to employees this tool is to augment, and not replace their jobs.**

Answer: A,B,C,D

Explanation:

The Continuous Improvement and Respect for People principle in CPMAI stresses involving end users early—gathering their pain points (A), clarifying that AI will augment rather than replace roles (B & C), and providing thorough training to build confidence (D). Engaging stakeholders throughout the project lifecycle and prioritizing user-centered design are key to adoption.

NEW QUESTION # 104

Enhancing and cleaning data is an important action during which phase of CPMAI?

- A. Phase IV
- B. Phase I

- C. Phase III
- D. Phase V
- E. Phase II
- F. Phase VI

Answer: C

Explanation:

The CPMAI v7 methodology groups all data-centric preparation activities-including both data cleansing ("Clean data") and data augmentation ("Enhance & Augment data")-into Phase III: Data Preparation. In this phase, teams focus squarely on constructing the dataset to be used for modeling by performing all required cleaning, transformation, and enhancement operations.

Phase III: Data Preparation is defined in the Workbook's Table of Contents as covering Data Cleansing & Enhancement tasks ("Clean data" and "Enhance & Augment data").

Under Phase III, the Generic Task Group: Data Cleansing & Enhancement explicitly lists "Task: Clean data" (bringing data quality to modeling-ready levels) and "Task: Enhance & Augment data" (producing derived attributes and new records) as core activities .

NEW QUESTION # 105

Your team is working on a new facial recognition application. Since this technology has the potential to be mis-used you think it's important to set guidelines for the proper use of this application and you want to make sure the AI system is built for some positive purpose. What area of Trustworthy AI does this best fall under?

- A. Transparent AI
- B. Governed AI
- C. Explainable AI
- D. Responsible AI

Answer: D

Explanation:

Under Domain VI: Trustworthy AI in the CPMAI Exam Content Outline, Responsible AI covers establishing policies, guidelines, and governance that ensure AI solutions are developed for positive, ethical use and prevent misuse. Defining proper-use guidelines and embedding ethical intent into facial recognition directly align with Responsible AI practices .
