SPLK-1004 Actual Exams - Valid Splunk Splunk Core Certified Advanced Power User - Questions SPLK-1004 Exam

Time is very important for everyone. As the saying goes, time is life so spend it wisely. We believe that you also don't want to spend much time on preparing for your Splunk Core Certified Advanced Power User exam. How can you pass your exam and get your certificate in a short time? Our SPLK-1004 exam torrent will be your best choice to help you achieve your aim. According to

customers' needs, our product was revised by a lot of experts; the most functions of our Splunk Core Certified Advanced Power User exam dumps are to help customers save more time, and make customers relaxed. If you choose to use our SPLK-1004 Test Quiz, you will find it is very easy for you to pass your exam in a short time. You just need to spend 20-30 hours on studying; you will have more free time to do other things.

Splunk Core Certified Advanced Power User Sample Questions (Q46-Q51):

NEW QUESTION # 46

Assuming a standard time zone across the environment, what syntax will always return events from between 2:00 AM and 5:00 AM?

- A. `earliest=-2h@h AND latest=-5h@h`
- B. `time_hour>-2 AND time_hour>-5`
- C. `earliest=2h@ AND latest=5h3h`
- D. `datehour>-2 AND date_hour<5`

Answer: A

Explanation:

The correct syntax to return events from between 2:00 AM and 5:00 AM is `earliest=-2h@h AND latest=-5h@h`. This uses relative time modifiers to specify a range starting at 2 AM and ending at 5 AM.

NEW QUESTION # 47

Which SPL command converts the hour into a user's local time based upon the user's time zone preference setting?

- A. `time(_time, "%H")`
- B. `relative_time(_time, "%H")`
- C. `local_time(_time, "%H")`
- D. `strftime(_time, "%H")`

Answer: D

Explanation:

The `strftime` function in Splunk is used to format timestamps into human-readable strings. When you use `strftime(_time, "%H")`, it converts the `_time` field into the hour (00 to 23) based on the user's time zone preference setting.

Splunk stores all timestamps in Coordinated Universal Time (UTC). However, when displaying time, it adjusts according to the user's time zone preference set in their profile. Therefore, using `strftime` will reflect the local time for the user.

NEW QUESTION # 48

When and where do search debug messages appear to help with troubleshooting views?

- A. In the Search Job Inspector, after the search completes.
- B. In the Dashboard Editor, after the search completes.
- C. In the Search Job Inspector, while the search is running.
- D. In the Dashboard Editor, while the search is running.

Answer: C

Explanation:

Search debug messages appear in the Search Job Inspector while the search is running. This tool provides detailed insights into search performance and potential issues, making it helpful for troubleshooting.

NEW QUESTION # 49

What is the correct hierarchy of XML elements in a dashboard panel?

- A. `<dashboard><row><panel>`
- B. `<panel><dashboard><row>`

- C. <panel><row><dashboard>
- D. <dashboard><pane><row>

Answer: A

Explanation:

The correct XML hierarchy for a dashboard panel is <dashboard><row><panel>. The <dashboard> element contains rows, and within each <row>, there are panels that hold visualizations or searches.

NEW QUESTION # 50

Which commands should be used in place of a subsearch if possible?

- A. bin and/or where
- **B. stats and/or eval**
- C. untable and/or xyseries
- D. mvexpand and/or where

Answer: B

Explanation:

stats and eval are recommended over subsearches because they are more efficient and scalable. Subsearches can be slow and resource-intensive, whereas stats aggregates data, and eval performs calculations within the search.

The stats and eval commands should be used instead of subsearches whenever possible because subsearches have performance limitations. They return only a maximum of 10,000 results or execute within 60 seconds by default, which may cause incomplete results. Using stats allows aggregation of large datasets efficiently, while eval can manipulate field values within a search rather than relying on subsearches.
