The development of science and technology makes our life more comfortable and convenient, which also brings us more challenges. Many company requests candidates not only have work experiences, but also some professional certifications. Therefore it is necessary to get a professional SAFe-RTE Certification to pave the way for a better future. The SAFe-RTE question dumps produced by our company, is helpful for our customers to pass their exams and get the SAFe-RTE certification within several days.

Scaled Agile SAFe-RTE Exam Syllabus Topics:

Section	Objectives
Topic 1: Program Execution and Delivery	- Program Increment (PI) execution 1. Managing risks (ROAM) 2. Tracking PI objectives
	- Flow optimization 1. Kanban and WIP management 2. Flow metrics and bottleneck analysis

- Continuous integration and delivery practices
- Topic 2: DevOps and Continuous Delivery
 - 1. Quality and testing integration
 - 2. Release automation concepts

- Servant leadership practices
 - 1. Leading without authority
 - 2. Coaching Agile teams and leaders

- Topic 3: Lean-Agile Leadership
 - Continuous improvement culture
 - 1. Relentless improvement mindset
 - 2. Inspect and adapt workshops

- ART synchronization and coordination
 - 1. Scrum of Scrums and PO Sync
 - 2. Cross-team alignment practices

- Topic 4: Agile Release Train (ART) Facilitation
 - PI Planning execution and facilitation
 - 1. Identifying and managing dependencies
 - 2. Planning event structure and agenda

Exam Dumps SAFe-RTE Demo - 2026 Scaled Agile First-grade Exam Dumps SAFe-RTE Demo 100% Pass Quiz

If you want to enter a better company and double your salary, a certificate for this field is quite necessary. We can offer you such opportunity. SAFe-RTE study guide materials of us are compiled by experienced experts, and they are familiar with the exam center, therefore the quality can be guaranteed. In addition, SAFe-RTE Learning Materials have certain quantity, and it will be enough for you to pass the exam and obtain the corresponding certificate enough. We have a professional service staff team, if you have any questions about SAFe-RTE exam materials, just contact us.

Scaled Agile SAFe Release Train Engineer Sample Questions (Q154-Q159):

NEW QUESTION # 154

Which of the following is true of Iteration Goals in SAFe?

- A. They provide quantifiable metrics to be used in retrospectives
- B. They describe the value of planned Features and Enablers
- C. They provide KPIs for tracking progress and value realization
- D. They enable teams to keep aligned with PI objectives

Answer: D

Explanation:

Iteration Goals in SAFe are a high-level summary of the business and technical goals that an Agile Team agrees to accomplish in an Iteration. They are essential for coordinating an Agile Release Train (ART) as a self-organizing, self-managing team of teams. The primary benefits of Iteration Goals include aligning team members to a common purpose and aligning teams to common PI Objectives while managing dependencies. They provide Agile Teams, ART stakeholders, and management with a shared language for maintaining alignment, managing dependencies, and making necessary adjustments during the execution of the Planning Interval. These goals apply to teams whether they use SAFe Scrum, SAFe Team Kanban, or a hybrid of both. By setting Iteration Goals, teams can ensure that they are working towards the same objectives and can adjust their efforts as needed to stay on track with the overall goals of the ART.

NEW QUESTION # 155

SAFe is based on four primary bodies of knowledge which include Agile development, systems thinking, DevOps, and what type of product development?

- A. Iterative product development
- **B. Lean product development**
- C. Adaptive product development
- D. Incremental product development

Answer: B

Explanation:

The Scaled Agile Framework (SAFe) incorporates principles from Lean product development as one of its primary bodies of knowledge. This approach emphasizes creating value through the efficient flow of products from concept to cash. Lean thinking encourages systems to optimize the whole, eliminate waste, and deliver quickly with the highest quality. In the context of SAFe, Lean product development supports the creation of a sustainable workflow that delivers continuous value to the customer, aligning with the other bodies of knowledge such as Agile development, systems thinking, and DevOps to form a comprehensive framework for enterprise-scale delivery of solutions.

NEW QUESTION # 156

Which role should the Release Train Engineer play related to a hackathon event?

- A. Ensure the teams have allocated story points in the Innovation and Planning Iteration during the Program Increment to account for the effort
- B. Work with development leaders to make sure they give clear and detailed guidance to the developers on what is expected
- **C. Allow the teams as much flexibility as possible to promote innovation**
- D. Get approval for work to be done in the hackathon

Answer: C

Explanation:

The Release Train Engineer (RTE) is a servant leader and coach for the Agile Release Train (ART). One of the key responsibilities of the RTE is to facilitate ART events and processes and assist the teams in delivering value. In the context of a hackathon event, the RTE should play a role that aligns with this responsibility by allowing the teams as much flexibility as possible to promote innovation.

This approach is consistent with the principles of the Scaled Agile Framework (SAFe), which emphasizes fostering an environment of innovation and exploration. Hackathons are typically events that encourage creativity and out-of-the-box thinking, and the RTE's role is to support this by not imposing strict guidelines or seeking approvals for the work to be done during the hackathon. Instead, the RTE should ensure that the teams have the freedom to explore innovative solutions without being constrained by detailed guidance or pre-approved plans.

By promoting flexibility, the RTE helps to create an environment where teams can experiment and learn rapidly, which is essential for innovation. This is in line with the SAFe principle of fostering a culture of relentless improvement and a Lean-Agile mindset.

NEW QUESTION # 157

What should the Release Train Engineer do during the final plan review on Day two of Program Increment (PI) Planning?

- A. Verify that each team's uncommitted objectives have lower business value than the committed PI Objectives in order to reflect proper prioritization
- B. Encourage discussion of each team's product Vision as part of the final plan re-view
- **C. Facilitate all teams when they are presenting their final plans to the entire Agile Release Train**
- D. Facilitate the ROAMing of each team's risks

Answer: C

Explanation:

The Release Train Engineer (RTE) plays a crucial role during the Program Increment (PI) Planning, particularly on Day 2 during the final plan review. The RTE's responsibilities include:

* Facilitating the PI Planning Event: The RTE is instrumental in ensuring the PI planning event runs smoothly. On Day 1, they open the event, review the agenda, and introduce speakers. On Day 2, they continue to facilitate the event, which includes the final plan

review¹.

* Summarizing Team PI Objectives: After teams present their plans, the RTE summarizes the Team PI Objectives into Program PI Objectives and publishes them for visibility and transparency¹.

* Managing Risks and Dependencies: The RTE helps manage risks and dependencies, escalates and tracks impediments, and provides input on resourcing to address critical bottlenecks².

* Encouraging Collaboration: They encourage collaboration between teams and System and Solution Architects/Engineering².

* Ensuring Strategy and Execution Alignment: The RTE works with Product and Solution Management, Product Owners, and other stakeholders to help ensure strategy and execution alignment².

During the final plan review, the RTE's role is to facilitate the presentations of the final plans by all teams to the entire Agile Release Train. This is a critical part of the PI Planning process as it ensures alignment and transparency across all teams¹.

NEW QUESTION # 158

What does an ART planning board support?

- A. Feature delivery
- B. ART predictability
- C. Problem-solving
- D. Business Value assignment

Answer: A

Explanation:

An ART planning board supports Feature delivery. It is used during PI Planning and throughout the PI to visualize and manage the delivery of Features, including tracking dependencies and integration points between teams, thereby facilitating coordinated effort across the ART.

NEW QUESTION # 159

.....

There have been tens of thousands of our loyal customers who chose to buy our SAFe-RTE exam questions and get their certification. These people have already had a good job opportunity and are running on their way to fulfilling their dreams after using SAFe-RTE practice quiz! Want to be like them, you must also act! Time and tide wait for no man. And you can free download the demos of the SAFe-RTE study guide, you can have a try before purchase.
