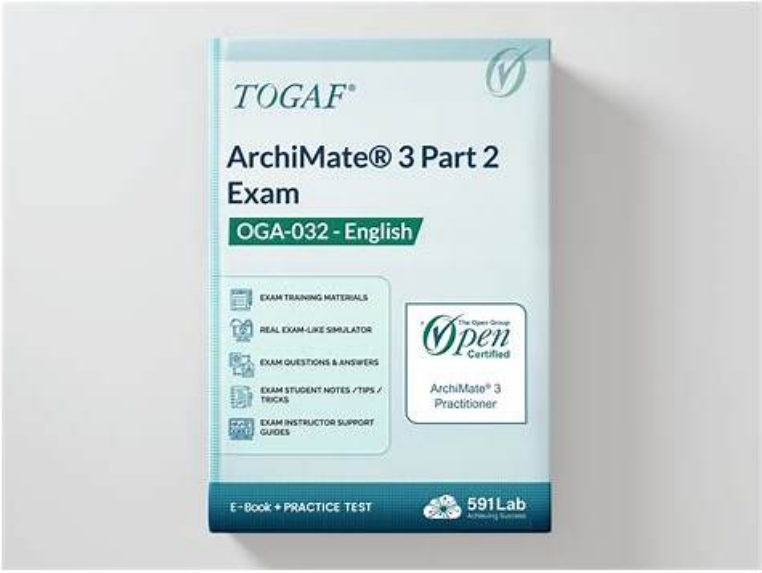
Pass Guaranteed 2026 OGA-032: ArchiMate 3 Part 2 Exam–High Pass-Rate Reliable Mock Test



Our ArchiMate 3 Part 2 Exam (OGA-032) exam questions are being offered in three easy-to-use and compatible formats. These ArchiMate 3 Part 2 Exam (OGA-032) exam dumps formats offer a user-friendly interface and are compatible with all devices, operating systems, and browsers. The Prep4SureReview ArchiMate 3 Part 2 Exam (OGA-032) PDF questions file contains real and valid The Open Group OGA-032 exam questions that assist you in OGA-032 exam dumps preparation and boost the candidate's confidence to pass the challenging ArchiMate 3 Part 2 Exam (OGA-032) exam easily.

The OGA-032 exam is the second part of the ArchiMate 3 certification program, which includes two exams. The first exam, OGA-031, tests the foundational knowledge and understanding of the ArchiMate language, while the second exam, OGA-032, focuses on the practical application of the language in enterprise architecture scenarios. OGA-032 exam covers topics such as the ArchiMate modeling language, the ArchiMate metamodel, the ArchiMate viewpoint mechanism, and the use of the language in different stages of the enterprise architecture development cycle. The ArchiMate 3 certification is a valuable asset for enterprise architects, solution architects, and other professionals working in the field of enterprise architecture.

The Open Group OGA-032 (ArchiMate 3 Part 2) Certification Exam is a computer-based exam that consists of 40 multiple-choice questions. Candidates have 90 minutes to complete the exam and must achieve a passing score of 60% or higher. OGA-032 exam is available in multiple languages and can be taken at authorized Pearson VUE testing centers around the world.

>> Reliable OGA-032 Mock Test <<

OGA-032 Valid Dumps Ppt | Valid OGA-032 Test Objectives

There are various individuals who have never shown up for the ArchiMate 3 Part 2 Exam certification test as of now. They know close to nothing about the ArchiMate 3 Part 2 Exam exam model and how to attempt the requests. The Open Group OGA-032 Dumps give an unequivocal thought of the last preliminary of the year model and how a promising rookie ought to attempt the solicitation paper to score well.

The Open Group OGA-032 (ArchiMate 3 Part 2) Certification Exam is a comprehensive exam that covers a wide range of topics related to enterprise architecture, including enterprise architecture principles, ArchiMate 3.0 concepts, building blocks, and viewpoints. OGA-032 exam also assesses a candidate’s understanding of the relationship between business processes, information systems, and technology infrastructure, as well as their ability to design and manage enterprise architecture using ArchiMate 3.0 modeling language.

The Open Group ArchiMate 3 Part 2 Exam Sample Questions (Q11-Q16):

NEW QUESTION # 11
Please read this scenario prior to answering the question

ArchiCar has been a market leader in the premium priced luxury car sector for the last decade. Its product leadership strategy has brought superior products to market, and enabled ArchiCar to achieve premium prices for its cars. This strategy has been widely successful in the past, but recently competitors have been offering comparable products and taking significant market share. The governing board of ArchiCar has identified opportunities in emerging markets where the ArchiCar brand is associated with luxury and high performance products, but is thought to be too expensive for mass-market success. Based on this assessment, the board has made the decision to setup a subsidiary company to mass- produce affordable cars locally. This will be achieved by focusing on a strategy of operational excellence. Such a strategy is ideal for such markets where customers value cost over other factors.
To facilitate this strategic transformation, the project has been divided into multiple phases within a five-year program. The initial phase, known as "Achieving Operational Excellence," is underway. The engineering team has begun devising an action plan to drive the necessary changes and outlining the technological conditions that must be met. The product architect has identified three current capabilities - industry-leading engineering, high-quality materials sourcing, and cutting-edge focussed R&D - along with their contributions to the new production philosophy.
Moving forward, it has been determined that two out of the three current capabilities require revision.
Materials sourcing needs to be adjusted to meet optimization demands, and R&D targets must align with future goals to enable affordable production. Additionally, process engineering is introduced as a fourth capability to shift the company's focus from products to a process-oriented approach.
The Enterprise Architecture team has been tasked with migration planning, and identifying key work packages and deliverables. They have identified two transition states between the current and future scenario.
The first transition aims to adjust
current capabilities, including revising the R&D approach and procurement strategy. The second transition aims to shift from a product-centric mindset to a process-focused approach and adjust materials sourcing accordingly. It is important to consider existing supplier contracts that cannot be immediately canceled during this process.
The Enterprise Architecture team has identified that the second transition must implement a process framework, in order to shift to a process focus and meet a number of requirements, including the requirement for end-to-end process thinking. As this requirement impacts procurement processes, it also impacts the procurement strategy.
Refer to the Scenario
You have been asked to model parts of the overall scenario, including migration planning, the motivations driving the migration, and the work packages necessary to achieve the desired deliverables.
Which of the following answers best describes the scenario?

- A. A diagram of a process Description automatically generated
- B. A diagram of a process Description automatically generated
- C. A diagram of process flow Description automatically generated
- D. A diagram of a process Description automatically generated

Answer: C

Explanation:
This scenario involvesmigration planningfor ArchiCar as it transitions from aproduct-centric approachto anoperational excellence strategyfor mass-producing affordable cars in emerging markets. The task is to model the steps involved, includingwork packages,deliverables, and themotivationsdriving the transitions.
Key ArchiMate® 3.2 Concepts Applied:
* Capabilities and Transition Phases:
* The existing capabilities-R&D, material sourcing, and engineering-need to be adjusted to fit the new strategy. In particular:
* Revising R&D targetsto align with the goal of affordable production.
* Revising the procurement strategyto optimize material sourcing.
* Introduction of aprocess focusin the second phase to shift from a product-centered approach to operational excellence.
* Two transition states are identified:
* Plateau 1 (Adjusted Capabilities):Focuses on revising theR&D strategyand procurement strategy.
* Plateau 2 (Shifted Focus):Involves shifting to a process-oriented focus, adjusting material sourcing, and implementing aprocess frameworkto enableend-to-end process thinking.
* Work Packages and Deliverables:
* Work packagesinclude activities such asrevising R&D strategyandprocurement strategy during the first transition, and thendeveloping process focusandimplementing a process frameworkin the second transition.
* These work packages are linked tokey deliverables:
* Plateau 1: Realigning R&D and procurement strategies to achieve adjusted capabilities.
* Plateau 2: Implementing a process framework, shifting to process-orientedthinking, and achieving the operational excellence goals.

* Motivation Elements:
* The migration is driven by a need torealign current capabilities(such as focusing R&D on affordability and optimizing procurement) and a requirement toshift focusfrom product leadership to operational excellence.
* The external driver is the competition and market opportunity in emerging markets, where cost is more critical than luxury.
* Dependencies and Constraints:
* Supplier contracts may impose constraints on how quickly procurement strategies can change, which is considered in the transition planning.
* Theprocess frameworkmust be implemented in a way that supportsend-to-end process thinking
.
Why Option B is Correct:
* Option Baccurately reflects the two transition phases (Plateaus 1 and 2) and shows the appropriate work packages and deliverables in line with the scenario.
* It clearly models the steps forrevising R&D strategyandprocurement strategyin the first transition, and the shift to aprocess focusin the second transition.
* Theprocess frameworkand its link toend-to-end process thinkingand procurement strategy are also correctly modeled, fulfilling the requirements of the scenario.
* Motivationsfor the changes, such as thefocus on the price/quality ratio, and the external drivers for shifting strategy are well captured.
Why Other Options Are Incorrect:
* Option AandOption Cmisrepresent or omit important relationships between work packages, such as the link between theprocess frameworkand theend-to-end process thinking.
* Option Ddoes not correctly capture the sequence of work packages and the logical flow of transitions between phases.
Conclusion:
Option Bprovides the most complete and accurate description of the scenario, correctly illustrating the migration planning,motivations, and thework packagesnecessary to achieve the target state. It aligns well with ArchiMate® 3.2 modeling standards and meets the scenario's requirements.

NEW QUESTION # 12
Please read this scenario prior to answering the question
ArchiSurance has decided to leverage its financial expertise by offering defined contribution retirement plans.
Each trading day, ArchiSurance submits consolidated mutual fund trading transactions to a stock exchange on behalf of its retirement plan participants.
The daily mutual fund trading cycle consists of four key processes: Transaction capture, pricing, trading and reconciliation.
Transaction capture consists of two sub-processes: manual exchange and loans and distributions (L&D). For transaction capture, retirement plan participants use an online account management application to enter manual fund exchange transactions. For L&D, plan participants use a separate application to enter requests. The L&D application determines whether the request can be fulfilled based on the mutual fund balances held in each plan balances and a set of business rules. Each day's captured manual exchange transactions accumulate in a transaction database.
ArchiSurance contracts with a third-party information service to receive a file of mutual fund prices at the close of each trading day. The pricing application uses this file to convert captured transaction into trades, and then validates each trade against the mutual fund balances held in each plan. The pricing application generates a trade file with the minimum number of trades necessary. The trading application sends this file to an external trading service. When the trading application receives a confirmation file back from the trading service, it passes it to the reconciliation application, which updates the plan recordkeeping database.
The lead application Architect has decided to merge the pricing application, the trading application and the reconciliation application into one application, which will be serving the pricing, trading and reconciliation processes respectively. The reason for this is that maintenance costs for these three components are too high and the performance is too slow. This implementation will increase the performance and lower the maintenance cost significantly.
The CIO has agreed on this plan, but wants this to be done in two phases, each in a separate project. Phase 1 should include the merger of the Trading and Pricing applications. Phase 2 should then merge the merged applications with the Reconciliation application respectively. Each project phase has a number of defined deliverables. Phase 1 has two deliverables, TraPri application implemented and tested' and 'Active TraPri application', whichtogether form a first transition architecture. Phase 2 has two deliverables, 'Recon 2.0 application implemented and tested' and 'Back-up applications phased out', which together form the second transition architecture. These two projects are part of the ArchiSurance application integration program scheduled for the next 6 months.
Refer to the Scenario
You have been asked by the lead application architect to show how the applications used for daily trading can be migrated. This should include a description of the work packages, deliverables and transition architectures.
Which of the following answers best describes the applications and migration plan?

- A. A diagram of a trading application AI-generated content may be incorrect.
- B. A diagram of a process flow AI-generated content may be incorrect.
- C. A diagram of a process AI-generated content may be incorrect.
- D. A diagram of a process flow AI-generated content may be incorrect.

Answer: B

Explanation:
We need to determine the best model that:
* Shows the current applications and their functions- Pricing, Trading, and Reconciliation applications.
* Represents the migration phases-
* Phase 1:Merges the Trading and Pricing applications intoTraPri.
* Phase 2:MergesTraPriwith the Reconciliation application to createRecon 2.0.
* Includes transition architectures- Each phase has distinct deliverables marking the transition from old applications to new merged applications.
* Shows the work packages and dependencies- The sequence of activities leading to the final implementation.
Why D is the Best Choice:
#Clearly distinguishes baseline (existing) applications and the new applicationsafter the migration.# Illustrates the two transition states correctly-
* First transition:Implementation and activation of theTraPriapplication.
* Second transition:Implementation ofRecon 2.0and phase-out of backup applications.#Depicts the migration process sequentially-Ensuring a clear understanding of how the applications evolve over time.#Work packages and deliverables are well structured-Aligning with the phases described in the scenario.
Why Not A, B, or C?
* A:Does not correctly represent the transition phases and their deliverables.
* B:Lacks clarity in differentiating baseline applications from transition architectures.
* C:Misrepresents dependencies and transition states, making the migration process unclear.

NEW QUESTION # 13
Please read this scenario prior to answering the question
The IT Operations (IT Ops) department at ArchiSurance has five core responsibilities, each encompassing a dedicated business process: (1) Batch Operations (Batch Ops), (2) Online Operations (Online Ops), (3) Security Operations (Security Ops), (4) User Support and (5) Continuous Improvement. Service level agreements (SLAs) are in place for Batch Ops and Online Ops, and each Ops process generates monitoring data that is utilized by the Continuous Improvement process.
The System Ops category consists of Batch Ops, Online Ops, and Security Ops, each having an incident management sub-process. These sub-processes are triggered by Batch, Online, and Security Incidents, respectively. In the initial stages of the incident management sub-processes, an Incident Alert is shared with the other System Ops processes by posting it to the Alert Buffer.
Batch Ops relies on a schedule that outlines all batch jobs and their dependencies. This schedule serves two sub-processes: Batch Planning, which updates the schedule for use by the Execution Management sub-process.
The Batch Ops process relies on a suite of interconnected applications to facilitate its operations. Among these applications, the Batch Scheduler plays a vital role by allowing users to manage a comprehensive database of jobs, job schedules, and dependencies. It effectively launches batch jobs according to the information stored in the database.
Working in conjunction with the Batch Scheduler, the Batch Monitor application utilizes the job schedules as a reference point to monitor job execution. It identifies any exceptional conditions that may arise during the execution process. To ensure effective handling of these exceptions, the Batch Monitor communicates the information to both the Batch Scheduler and the Incident Handler applications through the previously mentioned Alert Buffer.
The Incident Handler application operates based on a defined set of business rules. It uses these rules to determine the relevant systems and individuals that need to be notified in the event of each incident.
Subsequently, the Incident Handler
application generates appropriate notifications according to these determinations.
Recognizing the criticality of the Batch Scheduler, Batch Monitor, and Incident Handler applications, ArchiSurance has implemented redundant hosting arrangements across multiple geographically distributed data centers. In each data center, these three applications are supported by fully redundant virtual server clusters. Each cluster is connected to two site local area networks, both of which are further linked to separate storage array hardware devices.
Refer to the scenario
As part of an IT service management initiative, you have been assigned the task to show how applications and technology support

the Batch Ops process. This should show the relationships between the applications, their functions, the data they access, and the technology that hosts the applications and data, along with the networks that connect the servers. It is only necessary to model a single data center.
Which of the following answers provides the most complete and accurate model?

- A. A diagram of a work flow Description automatically generated
- B. A diagram of a work flow Description automatically generated
- C. A diagram of a firefighter Description automatically generated
- D. A diagram of a software system Description automatically generated with medium confidence

Answer: C

Explanation:
The correct answer isCas it provides the most complete and accurate model according to the ArchiMate® 3 framework and the given scenario.
Here's why:
* Business Processes and Sub-Processes:
* Batch Operations (Batch Ops)is one of the core responsibilities in IT Operations, and its processes are modeled clearly. TheBatch Scheduleris responsible for managing batch jobs, schedules, and dependencies.
* TheBatch Monitoris correctly shown to monitor the job execution and notify exceptions using theAlert Buffer.
* TheIncident Handleris used to notify relevant systems and individuals, triggered by the incident detection fromBatch Monitor. This is modeled by the use of incident handling rules and notifications.
* Application Layer (Application Components and Functions):
* TheBatch Scheduler,Batch Monitor, andIncident Handlerare accurately depicted as the main applications. These applications are crucial for managing job scheduling, monitoring execution, and handling incidents.
* These applications share the same virtual server cluster, which is an important detail reflecting redundancy and high availability, which was mentioned in the scenario.
* The interrelationships between applications are accurately depicted: theBatch Schedulerlaunches jobs, theBatch Monitorchecks their status, andIncident Handlerdeals with exceptions.
* Data Access:
* TheBatch Scheduleraccesses and updates batch jobs and schedules, and this is represented clearly.
* TheIncident dataandIncident notificationsare accurately modeled as being used byIncident Handler.
* Technology Layer:
* TheVirtual server cluster,Storage arrays, andSite Local Area Networksare appropriately connected to support the application infrastructure.
* Redundancy is shown through the use of multiple storage arrays and network connections, as described in the scenario.
* Accuracy in Relationship Types (ArchiMate® 3) References:
* The relationships between components are modeled using ArchiMate® 3 standards, such as flow relationships between the Batch Monitor and Alert Buffer or between the Incident Handler and storage components.
* Triggeringrelationships exist between the applications that manage batch jobs and the monitoring /notification process, ensuring correct job execution and incident handling.
Conclusion:AnswerCis the most complete model, as it accurately reflects the roles of the various applications, their interactions, and the underlying technology components in support of theBatch Ops process, following the guidelines and modeling standards of ArchiMate® 3.

NEW QUESTION # 14
Please read this scenario prior to answering the question
The ArchiSurance senior management, board members, customers, and major stockholders have expressed long-standing concerns regarding the business continuity risks associated with relying on a single data center.
Located in an area prone to
flooding, earthquakes, and occasional water leaks from the cafeteria above, the current data center has significant vulnerabilities.
To address these concerns and mitigate the risks, ArchiSurance has developed a comprehensive plan to relocate its existing data center to two separate ready-to-use data centers in different cities. As a major undertaking, the approval of the Board of Directors is required to proceed with the project.
The primary objectives of the data center move are to reduce the risk of business interruptions, reduce both planned and unplanned downtime for critical applications, and provide reassurance to ArchiSurance stakeholders. Ensuring minimal disruption during the

transition is crucial. However, several constraints make the planned migration to the new data centers particularly challenging. Certain critical ArchiSurance applications cannot be offline for more than one hour, and any planned downtime must be restricted to specific four-hour windows on weekends. Additionally, the migration cannot take place during quarterly or year-end closing periods to avoid disrupting critical processing operations.
ArchiSurance management has devised a multi-phase data center transformation program to facilitate a smooth transition. Each phase is critical for establishing stable and fully functional data center configurations throughout the transformation process.
The initial phase entails detailed scheduling and planning to develop a comprehensive transformation plan aligned with ArchiSurance's timing and scheduling requirements. During the second phase, ArchiSurance will procure the necessary hardware and software for the new data centers, while also seeking refunds for the hardware and software in the current data center once it is decommissioned. The third phase involves setting up the new data centers and conducting parallel testing of the new hardware and software alongside the existing production environment. The transition between the old and new data centers occurs in the fourth phase, followed by the fifth phase, which is the decommissioning of the old data center. This involves returning the hardware and software to obtain the contracted refunds. Each phase, from the second to the fifth, is initiated once specific conditions outlined in the previous phase have been met.
Refer to the Scenario
The IT department's leader has assigned you the task of creating a model to explain the rationale behind Archisurance's decision to transform its data center infrastructure. The model should show the concerns and motivations of the stakeholders involved. Additionally, it should outline the specific goals to be achieved through the data center transformation program, the associated deliverables, and the limitations that must be considered throughout the program's implementation.
Which of the following answers provides the best explanation?

- A. A diagram of a data center AI-generated content may be incorrect.
- B. A diagram of a data center AI-generated content may be incorrect.
- C. A diagram of data center AI-generated content may be incorrect.
- D. A diagram of data center AI-generated content may be incorrect.

Answer: D

Explanation:
We need to identify the most accurate and complete model that explains:
* Stakeholder Concerns & Motivations- Including senior management, board members, customers, and stockholders.
* Objectives & Goals- Reducingbusiness risks, minimizingdowntime, andreassuring stakeholders.
* Deliverables- Thetransition to two new data centersanddata center transformation program.
* Constraints & Requirements-Planned downtime limits, critical application uptime requirements, and scheduling constraints.
Why C is the Best Choice:
#Includes all stakeholder concerns- Clearly representsbusiness continuity risksandthe rationale for transitioning to two new data centers.#Clearly defines the objectives- Reducingdowntime and risk of business interruption.#Shows key constraints-
* Critical applications cannot be offline for more than one hour.
* Downtime must be in four-hour weekend windows.
* The migration must avoid closing periods.#Links deliverables to objectives- Thedata center transformation programandnew data centersare clearly positioned as solutions.#Represents dependencies correctly- Showing how eachmotivation leads to a goal, which leads to a deliverable.
Why Not A, B, or D?
* A:Does not establish a strong link between theconcerns and the solutionclearly enough.
* B:The structure does not align well with the scenario requirements, andsome constraints and dependencies are missing.
* D:Overcomplicates some relationships anddoes not emphasize stakeholder concerns effectively.

NEW QUESTION # 15
Please read this scenario prior to answering the question
ArchiCar has been a market leader in the premium priced luxury car sector for the last decade. Its product leadership strategy has brought superior products to market, and enabled ArchiCar to achieve premium prices for its cars. This strategy has been widely successful in the past, but recently competitors have been offering comparable products and taking significant market share. The governing board of ArchiCar has identified opportunities in emerging markets where the ArchiCar brand is associated with luxury and high performance products, but is thought to be too expensive for mass-market success.
Based on this assessment, the board has made the decision to setup a subsidiary company to mass-produce affordable cars locally. This will be achieved by focusing on a strategy of operational excellence. Such a strategy is ideal for such markets where customers

value cost over other factors.
To facilitate this strategic transformation, the project has been divided into multiple phases within a five-year program. The initial phase, known as "Achieving Operational Excellence," is underway. The engineering team has begun devising an action plan to drive the necessary changes and outlining the technological conditions that must be met. The product architect has identified three current capabilities - industry-leading engineering, high-quality materials sourcing, and cutting-edge focussed R&D - along with their contributions to the new production philosophy.
Moving forward, it has been determined that two out of the three current capabilities require revision.
Materials sourcing needs to be adjusted to meet optimization demands, and R&D targets must align with future goals to enable affordable production.
Additionally, process engineering is introduced as a fourth capability to shift the company's focus from products to a process-oriented approach.
The Enterprise Architecture team has been tasked with migration planning, and identifying keywork packages and deliverables. They have identified two transition states between the current and future scenario. The first transition aims to adjust current capabilities, including revising the R&D approach and procurement strategy. The second transition aims to shift from a product-centric mindset to a process-focused approach and adjust materials sourcing accordingly.
It is important to consider existing
supplier contracts that cannot be immediately canceled during this process.
The Enterprise Architecture team has identified that the second transition must implement a process framework, in order to shift to a process focus and meet a number of requirements, including the requirement for end-to-end process thinking. As this requirement impacts procurement processes, it also impacts the procurement strategy.
Refer to the Scenario
You have been tasked with modeling the current capabilities of ArchiCar, identifying the capabilities necessary for the company to achieve Operational Excellence, and showing the motivations behind these changes Which of the following models best answers this?

- A. A diagram of a process AI-generated content may be incorrect.
- B. A diagram of a process AI-generated content may be incorrect.
- C. A diagram of a process AI-generated content may be incorrect.
- D. A diagram of a process AI-generated content may be incorrect.

Answer: A

Explanation:
We need to find the model that best represents:
* Current Capabilities- Industry-leading engineering, high-quality materials sourcing, and cutting-edge focused R&D.
* Strategic Shift- Moving fromproduct leadershiptooperational excellenceto enter emerging markets.
* Required Changes-
* AdjustingR&D targetsto support cost-effective production.
* Revisingmaterials sourcingfor optimization.
* Introducingprocess engineeringto enable a process-oriented mindset.
* Motivations Behind the Changes-
* Competitor pressure.
* Emerging market opportunities.
* High costs limiting mass-market success.
Why D is the Best Choice:
#Includes all current and future capabilities- Shows the existing strengths ofengineering, R&D, and materials sourcingwhile introducingprocess engineeringas required for operational excellence.#Clearly depicts the shift in strategy- Fromproduct leadershiptooperational excellenceand the necessary transformations.#Captures stakeholder concerns and motivations- Includingcompetition, cost concerns, and emerging market opportunities.#Represents dependencies and sequencing correctly- Reflecting how each capability changecontributes to the transition states and ultimate business goals.
Why Not A, B, or C?
* A:Does not properly represent the transition betweenproduct leadershipandoperational excellence.
* B:Fails to clearly define the requiredcapability changesand motivations.
* C:Lacks key relationships betweenstrategy shifts and operational changes.
