## Pass Guaranteed Quiz 2026 The Best Appian ACD201: Reliable Appian Senior Developer Test Labs

Exam4PDF's Appian ACD201 practice exam software tracks your performance and provides results on the spot about your attempt. In this way, our Appian ACD201 simulation software encourages self-analysis and self-improvement. Questions in the Appian ACD201 Practice Test software bear a striking resemblance to those of the real test. This Appian ACD201 practice exam software is easily accessible on all Windows laptops and computers.

### Appian ACD201 Exam Syllabus Topics:

| Topic   | Details                                                                                                                                                                                                                                                                                                                                                                                      |
|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 1 | <ul style="list-style-type: none"> <li>• <b>Data Management:</b> This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.</li> </ul>                                            |
| Topic 2 | <ul style="list-style-type: none"> <li>• <b>Advanced Appian Concepts:</b> This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.</li> </ul>                                 |
| Topic 3 | <ul style="list-style-type: none"> <li>• <b>Performance and Scalability:</b> This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.</li> </ul>        |
| Topic 4 | <ul style="list-style-type: none"> <li>• <b>Application Design and Development:</b> This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.</li> </ul> |

### Appian Senior Developer Sample Questions (Q11-Q16):

#### NEW QUESTION # 11

You need to create a read-only grid that displays support case information. Data for the support cases is mapped to the "Case" record type with data sync enabled.

Within the record, there are fields named "createdDateTime" and "resolvedDateTime". These two fields store the timestamps for when a case is created and resolved, respectively.

The grid includes a column indicating the number of hours between when the case was created and when it was resolved. This column must be sortable within the grid.

How should you calculate the hour value that will display in the column?

- **A. Create a custom record field that evaluates in real-time, and calculates the number of hours between when the case was**

created and when it was resolved.

- B. Within the grid column, utilize an Appian function to calculate the number of hours between when the case was created and when it was resolved.
- C. Create a custom record field that evaluates at sync-time, and calculates the number of hours between when the case was created and the current date and time.

**Answer: A**

Explanation:

A custom record field that evaluates in real-time and calculates the hours between "createdDateTime" and "resolvedDateTime" ensures the calculated value is available as a sortable field within the read-only grid.

#### NEW QUESTION # 12

You're conducting a design review.

You identify slow-performing expression rules querying a specific data store, and need to understand the "number of operations against data stores." Which metric from the data\_store\_details.csv file is helpful to you?

- A. Query Count
- B. TCCCotal Count
- C. Execute Count

**Answer: A**

Explanation:

The "Query Count" metric in the data\_store\_details.csv file indicates the number of operations (queries) performed against data stores, helping you analyze data store usage.

#### NEW QUESTION # 13

You have a requirement to implement an audit trail for any modifications to a record.

You need to select the most efficient design option that has the least impact on your Appian application.

What should you do?

- A. Create an Appian process to capture the change history and write the audit trail to the database
- B. Create a trigger on the database table to capture the audit trail to a table
- C. Create a custom plug in that can write an audit trail to a log file.

**Answer: B**

#### NEW QUESTION # 14

How can a user in the Appian environment prevent the uploading of documents without extensions?

- A. Enable File upload > Block files without an extension, under the Administrative console.
- B. Restrict document uploads by user roles.
- C. No actions are required from the user; Appian auto validates these documents.

**Answer: A**

#### NEW QUESTION # 15

You're creating a new record type with data sync enabled. Users in the "ACME Employees" group must be able to access the record list and start the New Case action.

What are two valid steps that you should perform to grant users the appropriate access? (Choose two.)

- A. Grant Viewer permissions to the underlying interface object for the record list.
- B. Add the "ACME Employees" group as a Viewer to the data store mapped to the record.
- C. Grant Initiator permissions to the underlying process model for the New Case action.
- D. Add the "ACME Employees" group as a Viewer on the record type.

Explanation:  
Adding the "ACME Employees" group as a Viewer on the record type allows them to access the record list.  
Granting Initiator permissions to the process model for the New Case action enables group members to start that action.
