With these adjustable Certified Threat Intelligence Analyst (312-85) mock exams, you can focus on weaker concepts that need improvement. This approach identifies your mistakes so you can remove them to master the Certified Threat Intelligence Analyst (312-85) exam questions of FreeCram give you a comprehensive understanding of 312-85 Real Exam format. Self-evaluation by taking practice exams makes your ECCouncil 312-85 exam preparation flawless and strengthens enough to crack the test in one go.

The Certified Threat Intelligence Analyst (CTIA) is a certification exam offered by the EC-Council. The CTIA certification is a professional-level certification that is designed to validate the skills and knowledge of individuals who work in the field of threat intelligence analysis. The CTIA exam is designed to test the candidate's ability to collect, analyze, and disseminate threat intelligence data from various sources.

Free PDF 2026 312-85: Certified Threat Intelligence Analyst Fantastic Examcollection Questions Answers

A lot of effort, commitment, and in-depth Certified Threat Intelligence Analyst (312-85) exam questions preparation is required to

pass this ECCouncil 312-85 exam. For the complete and comprehensive Certified Threat Intelligence Analyst (312-85) exam dumps preparation you can trust valid, updated, and 312-85 Questions which you can download from the FreeCram platform quickly and easily.

The CTIA certification exam covers a wide range of topics related to threat intelligence, including the principles and practices of cyber threat intelligence, threat intelligence analysis techniques, threat intelligence data sources, and threat intelligence dissemination. 312-85 Exam also covers the legal and ethical considerations of threat intelligence, including privacy and data protection laws, ethical codes of conduct, and international laws.

ECCouncil Certified Threat Intelligence Analyst Sample Questions (Q57-Q62):

NEW QUESTION # 57

Mr. Bob, a threat analyst, is performing analysis of competing hypotheses (ACH). He has reached to a stage where he is required to apply his analysis skills effectively to reject as many hypotheses and select the best hypotheses from the identified bunch of hypotheses, and this is done with the help of listed evidence. Then, he prepares a matrix where all the screened hypotheses are placed on the top, and the listed evidence for the hypotheses are placed at the bottom.

What stage of ACH is Bob currently in?

- A. Refinement
- B. Evidence
- C. Inconsistency
- **D. Diagnostics**

Answer: D

NEW QUESTION # 58

Flora, a threat intelligence analyst at PanTech Cyber Solutions, is working on a threat intelligence program.

She is trying to collect the company's crucial information through online job sites.

Which of the following information will Flora obtain through job sites?

- A. Top-level domains and subdomains of the company
- **B. Hardware and software information, network-related information, and technologies used by the company**
- C. Open ports and services

Answer: B

Explanation:

When attackers or analysts search job postings on online job portals, they often uncover technical details inadvertently shared by organizations.

Job listings frequently mention:

* Hardware and software used (e.g., "experience with Cisco firewalls, Windows Server 2019").

* Network details and tools (e.g., "knowledge of LAN/WAN, AWS, Azure").

* Security technologies (e.g., "SIEM tools like Splunk or QRadar").

This information can help analysts identify the technological footprint of the company, which is valuable during threat profiling or reconnaissance.

Why the Other Options Are Incorrect:

* B. Top-level domains and subdomains: Obtained through DNS enumeration tools, not job sites.

* C. Open ports and services: Found through active scanning tools like Nmap, not via job postings.

Conclusion:

Flora can obtain hardware, software, and network-related information from online job listings.

Final Answer: A. Hardware and software information, network-related information, and technologies used by the company

Explanation Reference (Based on CTIA Study Concepts):

CTIA recognizes online job sites as OSINT sources that can reveal technical environment details about organizations.

NEW QUESTION # 59

A network administrator working in an ABC organization collected log files generated by a traffic monitoring system, which may not seem to have useful information, but after performing proper analysis by him, the same information can be used to detect an attack in

the network.

Which of the following categories of threat information has he collected?

- A. Low-level data
- B. Advisories
- C. Strategic reports
- **D. Detection indicators**

Answer: D

NEW QUESTION # 60

In which of the following storage architecture is the data stored in a localized system, server, or storage hardware and capable of storing a limited amount of data in its database and locally available for data usage?

- **A. Centralized storage**
- B. Object-based storage
- C. Distributed storage
- D. Cloud storage

Answer: A

Explanation:

Centralized storage architecture refers to a system where data is stored in a localized system, server, or storage hardware. This type of storage is capable of holding a limited amount of data in its database and is locally available for data usage. Centralized storage is commonly used in smaller organizations or specific departments within larger organizations where the volume of data is manageable and does not require the scalability offered by distributed or cloud storage solutions. Centralized storage systems simplify data management and access but might present challenges in terms of scalability and data recovery. References:

NEW QUESTION # 61

Sarah is a security operations center (SOC) analyst working at JW Williams and Sons organization based in Chicago. As a part of security operations, she contacts information providers (sharing partners) for gathering information such as collections of validated and prioritized threat indicators along with a detailed technical analysis of malware samples, botnets, DDoS attack methods, and various other malicious tools. She further used the collected information at the tactical and operational levels.

Sarah obtained the required information from which of the following types of sharing partner?

- **A. Providers of comprehensive cyber-threat intelligence**
- B. Providers of threat actors
- C. Providers of threat data feeds
- D. Providers of threat indicators

Answer: A

Explanation:

The information Sarah is gathering, which includes collections of validated and prioritized threat indicators along with detailed technical analysis of malware samples, botnets, DDoS methods, and other malicious tools, indicates that she is obtaining this intelligence from providers of comprehensive cyber-threat intelligence.

These providers offer a holistic view of the threat landscape, combining tactical and operational threat data with in-depth analysis and context, enabling security teams to make informed decisions and strategically enhance their defenses.
