Adobe AD0-E725 Dumps Torrent files is the leading position in this field and can be your NO.1 choice.

Adobe Commerce Developer Expert Sample Questions (Q39-Q44):

NEW QUESTION # 39

A Developer applies multiple quality patches to an Adobe Commerce Cloud store. After deployment, the Developer discovers that one of the patches is causing issues.

What is the correct procedure to safely remove or revert the problematic quality patch?

- A. Execute command in `magento-cloud.php /vendor/bin/ecc-patches:revert <patch-id>`.
- B. Delete the quality patch from the file `magento.app.yaml`.
- C. Delete the quality patch from the file `magento.env.yaml`.

Answer: A

NEW QUESTION # 40

A Developer working on a Magento 2 store needs to modify the Content Security Policy (CSP) to allow loading of images from a trusted external domain while maintaining strict policies for other resources. To accomplish this, the `csp_whitelist.xml` file must be updated.

Which code snippet should the Developer use to update the CSP configuration?

- A. `<policies>`
`<policy id="img-src">`
`<values>`
`<value id="trusted_image" type="host">website.com</value>`
`</values>`
`</policy>`
`</policies>`
- B. `<policies>`
`<policy id="default-src">`
`<values>`
`<value id="trusted_image" type="host">website.com</value>`
`</values>`
`</policy>`
`</policies>`
- C. `<csp>`
`<policies>`
`<policy id="media-src">`
`<values>`
`<value id="trusted_image" type="host">website.com</value>`
`</values>`
`</policy>`
`</policies>`
`</csp>`

Answer: A

Explanation:

To allow loading of external images, the policy that must be updated is img-src in the csp_whitelist.xml.

Option A (default-src) is too broad and not best practice.

Option C (media-src) applies only to audio/video sources, not images.

Thus, B is the correct solution.

NEW QUESTION # 41

An Adobe Commerce Cloud Developer is tasked with investigating slow page loads and intermittent errors reported by a client after a recent deployment to their Pro Production environment.

Which action should the Developer use to quickly access and analyze the necessary data?

- A. Go to New Relic Log Management to access aggregated log data, allowing the analysis of application, infrastructure, CDN, and WAF errors.
- B. Access Cloud Console to review environment messages and deployment logs that took place during the previous deployment to production.
- C. Connect via SSH into each production node to review system and application logs independently for a more accurate representation of issues being logged.

Answer: A

NEW QUESTION # 42

A client receives an alert stating that storage on their production environment is nearly full. They are using Pro architecture and are concerned about storage capacity. A Developer is asked to increase the disk size.

How should this problem be solved?

- A. Extend their Adobe license.
- B. Open a ticket with Adobe support.
- C. Modify the magento.app.yaml file.

Answer: B

NEW QUESTION # 43

A Developer needs to replicate a recent issue that occurred in the staging environment so it can be tested locally. The Developer decides to dump the staging database and import it into the local setup.

Which command should the Developer use to do this?

- A. magento-cloud snapshot:db-dump
- **B. vendor/bin/ece-tools db-dump**
- C. vendor/bin/ece-tools db-snapshot

Answer: B

Explanation:

The correct way to dump a database from an Adobe Commerce Cloud environment is with the vendor/bin/ece-tools db-dump command.

A (db-snapshot) is not a valid ece-tools command.

B is incorrect: magento-cloud snapshot commands are for managing whole environment snapshots, not direct DB dumps.

C is correct: ece-tools db-dump provides the database export for staging/local replication.
