## Reliable B2C-Commerce-Architect Test Cram | Test B2C-Commerce-Architect Score Report

Our career is inextricably linked with your development at least in the B2C-Commerce-Architect practice exam's perspective. So we try to emulate with the best from the start until we are now. So as the most professional company of B2C-Commerce-Architect study dumps in this area, we are dependable and reliable. We maintain the tenet of customer's orientation. If you hold any questions about our B2C-Commerce-Architect Exam Prep, our staff will solve them for you 24/7. It is our duty and honor to offer help.

Salesforce B2C-Commerce-Architect (Salesforce Certified B2C Commerce Architect) Exam is designed to validate the skills and knowledge of individuals who specialize in architecting and implementing B2C commerce solutions using the Salesforce Commerce Cloud platform. B2C-Commerce-Architect exam is specifically intended for professionals who have already earned the Salesforce Certified Technical Architect (CTA) credential and want to further specialize in B2C commerce.

Salesforce B2C-Commerce-Architect exam is designed for architects and senior developers who have experience in designing and implementing complex solutions using the Salesforce B2C Commerce platform. B2C-Commerce-Architect Exam Tests the candidate's knowledge of the platform's architecture, integration options, and security features. It also focuses on the candidate's ability to design and implement complex solutions that meet the needs of various stakeholders, including business users and customers.

## Salesforce Certified B2C Commerce Architect Sample Questions (Q45-Q50):

### NEW QUESTION # 45

A client has a single site with multiple domains, locales, and languages. After launch, there is a need for the client to perform offline

maintenance. The client would like to show the same maintenance page for each locale.

Which version of aliases.json file below will accomplish this task?

- A)
- 
- B)
- 
- C)
- 
- D)
- 

- A. Option D
- B. Option A
- C. Option B
- D. Option C

**Answer: A**

#### **NEW QUESTION # 46**

The client provided these business requirements:

- \* The B2C Commerce storefront will integrate with the client's Order Management System (OMS).
- \* The storefront will provide real-time order export of successfully pieced orders. The OMS supports both web service export and SFTP batch order export, but the client has expressed concern about the availability of the OMS.

Which two solutions satisfy the requirements and address the OMS reliability concern?

Choose 2 answers

- A. Implement a batch export of orders to SFTP, excluding exported orders. This runs as a scheduled job with a high-frequency run rate and marks processed orders as exported upon success.
- B. Implement a live export of orders during checkout via web service, marking the processed order as exported when the AM returns successfully.
- C. Implement a batch export of orders via web service, excluding exported orders. This runs as a scheduled job with an hourly run rate and marks processed orders as exported upon success.
- D. Implement a live export of orders during checkout via SFTP, marking the processed order as exported when it has completed successfully.

**Answer: A,C**

Explanation:

Given the concerns about the reliability of the OMS, implementing scheduled batch exports ensures that order data is not lost due to potential OMS downtime and allows for reattempting failed exports. Option B uses SFTP for a high-frequency batch export, which can be scheduled to run multiple times a day, ensuring minimal delay in order synchronization while marking orders as exported upon successful transmission.

Option C provides a similar safeguard but via web service, which can be scheduled to run hourly. Both methods enable tracking of export status and can handle temporary downtimes by reattempting the export until successful, aligning with the need for reliability in integration processes.

#### **NEW QUESTION # 47**

A new client is moving from their existing ecommerce platform to B2C Commerce. They have an existing service that connects to the Email Marketing System. The endpoint of the service can directly parse the data posted by the customer from the Storefront page for marketing materials subscriptions. It is required that the service implementation on the B2C Commerce site supports authentication and encoding.

What type should the Architect document this new service as?

- A. SOAP
- B. Generic
- C. HTTP Form
- D. HTTP

**Answer: D**

Explanation:

For a service that connects to an Email Marketing System where the endpoint can directly parse data posted by the customer from

the storefront for marketing material subscriptions, documenting the service as an HTTP service is appropriate. This type of service will likely involve straightforward HTTP requests with authentication and encoding to ensure data integrity and security. The HTTP service type supports these requirements effectively, facilitating secure, reliable data transmission between the storefront and the email marketing system.

#### NEW QUESTION # 48

A company is beginning a multi-cloud implementation involving B2C Commerce and Service Cloud. The company wants to trace configuration and code changes as much as possible and ensure basic standards for code quality.

Which three options should a Solution Architect recommend to help the company with this goal?

Choose 3 answers

- A. Static Code Analysis tools
- B. GIT Repository
- C. Salesforce DX
- D. Smoke testing
- E. CI/CD Pipelines

**Answer: A,B,E**

#### NEW QUESTION # 49

The Client is creating a new Storefront and their requirements include:

- \* ApplePay support
- \* Log -n through a standard OAuth2 social media account
- \* One Okie checkout process
- \* Ay B testing for promotions

Which two items require technical documentation for customizing the Storefront Reference Architecture?

Choose 2 answers

- A. log in through a standard OAuth2 social media account
- B. A/B testing for promotions
- C. ApplePay support
- D. One Click checkout process

**Answer: A,D**

Explanation:

For customizing the Storefront Reference Architecture to meet specific requirements, the following items would require detailed technical documentation:

Option A (One Click checkout process): Implementing a one-click checkout process involves significant customization to streamline the checkout flow, potentially requiring integration with payment providers and modifications to the user session management.

Option C (Log in through a standard OAuth2 social media account): Integrating OAuth2 for social media logins involves handling authentication tokens, user sessions, and potentially syncing user data with the B2C Commerce profiles, all of which require detailed security and integration documentation.

These customizations require careful planning and implementation to ensure they work seamlessly with existing Storefront Reference Architecture components and meet security standards.
