최신 SAP Certified Associate C_SEC_2405 무료샘플문제 (Q62-Q67):

질문 # 62

What does a status text value of "Old" mean during the maintenance of authorizations for an existing role?

- A. Field values were changed as a result of the merge process.
- B. Field values have not been changed.
- C. The field delivered with content was changed but the old value was retained.
- D. Field values were unchanged and no new authorization was added.

정답: C

설명:

* Context: During role maintenance in SAP, status values indicate changes or actions applied to field values.

* Solution Explanation:

* A status of "Old" means the field value was delivered with content but has since been modified, retaining the old value.

질문 # 63

SAP BTP distinguishes between which of the following users? Note: There are 2 correct answers to this question.

- A. Key users
- B. Business users
- C. Technical users
- D. Platform users

정답: C,D

질문 # 64

Which of the following allow you to control the assignment of table authorization groups? Note: There are 2 correct answers to this question.

- A. PRGN_CUST
- B. V_DDAT_54
- C. V_BRG_54
- D. SSM_CUST

정답: A,C

질문 # 65

When performing a comparison from the imparting role, what happens to the organizational level field values in the derived role?

Note: There are 2 correct answers to this question.

- A. Data for organizational levels that have already been maintained in the derived role is overwritten.
- B. Data for organizational levels is always transferred when authorization data for the derived role is modified.
- C. Data for organizational levels is transferred only when authorization data for the derived role is first modified.
- D. Data for organizational levels that have already been maintained in the derived role is NOT overwritten.

정답: C,D

설명:

When comparing an imparting role to a derived role:

* Preservation of Data (B): If organizational levels have already been maintained in the derived role, they are not overwritten to preserve specific configurations.

* Conditional Data Transfer (C): Organizational data is transferred only when the authorization data in the derived role is being modified for the first time.

질문 # 66

What is the correct configuration setting in table PRGN_CUST for user assignments when transporting roles within a Central User Administration scenario?

- A. USER_REL_IMPORT = NO
- B. SET_IMP_LOCK_USERS = YES
- C. SET_IMP_LOCK_USERS = NO
- D. USER_REL_IMPORT = YES

정답: A

설명:

In a Central User Administration (CUA) scenario, the table PRGN_CUST is used to configure settings for role and user management during transports. The correct setting for user assignments when transporting roles is USER_REL_IMPORT = NO. This setting ensures that user assignments linked to roles in the source system are not imported into the target system during the transport process. In CUA, user assignments are centrally managed in the CUA master system, and importing user assignments from a child system could lead to inconsistencies or overwrites, disrupting centralized control. By setting USER_REL_IMPORT to NO, the system preserves the CUA's authority to manage user-role assignments, ensuring that only role definitions are transported. The options related to SET_IMP_LOCK_USERS control user locking during imports, not user assignments, and USER_REL_IMPORT = YES would incorrectly allow user assignments to be transported, which is undesirable in a CUA setup. This configuration maintains the integrity of centralized user administration in SAP landscapes.
