Salesforce Certified MuleSoft Platform Architect Accurate Questions & Mule-Arch-201 Training Material & Salesforce Certified MuleSoft Platform Architect Study Torrent

In the matter of quality, our Mule-Arch-201 practice engine is unsustainable with reasonable prices. Despite costs are constantly on the rise these years from all lines of industry, our Mule-Arch-201 learning materials remain low level. That is because our company beholds customer-oriented tenets that guide our everyday work. The achievements of wealth or prestige is no important than your exciting feedback about efficiency and profession of our Mule-Arch-201 Study Guide.

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q93-Q98):

NEW QUESTION # 93

What Anypoint Connectors support transactions?

- A. Database, 3MS, HTTP
- **B. Database, JMS, VM**
- C. Database, JMS, VM, SFTP
- D. Database, VM, File

Answer: B

NEW QUESTION # 94

What is a key performance indicator (KPI) that measures the success of a typical C4E that is immediately apparent in responses from the Anypoint Platform APIs?

- A. The fraction of API implementations deployed manually relative to those deployed using a CI/CD tool
- B. The number of API implementations that have a publicly accessible HTTP endpoint and are being managed by Anypoint Platform
- **C. The number of API specifications in RAML or OAS format published to Anypoint Exchange**
- D. The number of production outage incidents reported in the last 24 hours

Answer: C

Explanation:

Correct Answer: The number of API specifications in RAML or OAS format published to Anypoint Exchange

>> The success of C4E always depends on their contribution to the number of reusable assets that they have helped to build and publish to Anypoint Exchange.

>> It is NOT due to any factors w.r.t # of outages, Manual vs CI/CD deployments or Publicly accessible HTTP endpoints

>> Anypoint Platform APIs helps us to quickly run and get the number of published RAML/OAS assets to Anypoint Exchange. This clearly depicts how successful a C4E team is based on number of returned assets in the response.

NEW QUESTION # 95

A Mule application exposes an HTTPS endpoint and is deployed to the CloudHub Shared Worker Cloud. All traffic to that Mule application must stay inside the AWS VPC.

To what TCP port do API invocations to that Mule application need to be sent?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

Correct Answer: 8082

>> 8091 and 8092 ports are to be used when keeping your HTTP and HTTPS app private to the LOCAL VPC respectively.

>> Above TWO ports are not for Shared AWS VPC/ Shared Worker Cloud.

>> 8081 is to be used when exposing your HTTP endpoint app to the internet through Shared LB

>> 8082 is to be used when exposing your HTTPS endpoint app to the internet through Shared LB So, API invocations should be sent to port 8082 when calling this HTTPS based app.

NEW QUESTION # 96

A company deployed an API to a single worker/replica in the shared cloud in the U.S. West Region.

What happens when the Availability Zone experiences an outage?

- A. The Anypoint Platform admin is alerted when the API is experiencing an outage and needs to trigger the CI/CD pipeline to redeploy to the U.S. East Region
- **B. The API will be unavailable until the availability comes back online, at which time the worker/replica will be auto-restarted**
- C. CloudHub will auto-redeploy the API in the U.S. East Region
- D. CloudHub will auto-redeploy the API in another Availability Zone in the U.S. West Region

Answer: B

Explanation:

In a CloudHub deployment with a single worker/replica located in a specific Availability Zone (AZ), if an AZ experiences an outage, here's what happens:

Worker Availability: Since the application is deployed in a single AZ, CloudHub does not automatically redeploy the application in a different zone or region during an outage. Thus, if the current AZ is unavailable, the application will be offline.

Auto-Restart upon AZ Recovery: Once the affected AZ is back online, CloudHub will auto-restart the worker in the same AZ without manual intervention. This ensures that as soon as the AZ is functional, the application resumes automatically.

of Correct Answer (B):

Option B accurately describes the situation, as the API will remain unavailable until the original AZ is restored.

CloudHub does not currently support automatic failover across regions or other availability zones within the same region for single-worker deployments on the shared cloud.

of Incorrect Options:

Option A (auto-redeployment in the U.S. East region) is incorrect, as CloudHub does not migrate across regions automatically.

Option C (redployment in another AZ within the U.S. West) is not a feature for single-worker deployments.

Option D (manual redeployment triggered by an admin) is unnecessary as CloudHub handles restarts automatically when the AZ is back online.

Reference

Refer to MuleSoft CloudHub's availability and disaster recovery documentation for more information on how CloudHub manages availability in shared environments.

NEW QUESTION # 97

Refer to the exhibit. An organization needs to enable access to their customer data from both a mobile app and a web application, which each need access to common fields as well as certain unique fields.

The data is available partially in a database and partially in a 3rd-party CRM system.

What APIs should be created to best fit these design requirements?

□ A) A Process API that contains the data required by both the web and mobile apps, allowing these applications to invoke it directly and access the data they need thereby providing the flexibility to add more fields in the future without needing API changes
□ B) One set of APIs (Experience API, Process API, and System API) for the web app, and another set for the mobile app
□ C) Separate Experience APIs for the mobile and web app, but a common Process API that invokes separate System APIs created for the database and CRM system

□ D) A common Experience API used by both the web and mobile apps, but separate Process APIs for the web and mobile apps that interact with the database and the CRM System

- A. Option B
- B. Option D
- C. Option A
- **D. Option C**

Answer: D

Explanation:

Correct Answer: Separate Experience APIs for the mobile and web app, but a common Process API that invokes separate System APIs created for the database and CRM system

As per MuleSoft's API-led connectivity:

>> Experience APIs should be built as per each consumer needs and their experience.

>> Process APIs should contain all the orchestration logic to achieve the business functionality.

>> System APIs should be built for each backend system to unlock their data.

NEW QUESTION # 98

.....

Obtaining the Mule-Arch-201 certificate will make your colleagues and supervisors stand out for you, because it represents Mule-Arch-201 your professional skills. At the same time, it will also give you more opportunities for promotion and job-hopping. The Mule-Arch-201 latest exam dumps have different classifications for different qualification examinations, which can enable students to choose their own learning mode for themselves according to the actual needs of users. The Mule-Arch-201 Exam Question offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation.
