AIGP training practice may be your best choice. There are comprehensive content in the AIGP simulate test which can ensure you 100% pass. AIGP valid and helpful training will give you more confidence and courage. Just starting stuy with AIGP dumps torrent, you will be on the way to success.

IAPP Certified Artificial Intelligence Governance Professional Sample Questions (Q169-Q174):

NEW QUESTION # 169

Which of the following use cases would be best served by a non-AI solution?

- A. A customer service agency wants automate answers to common questions.
- B. A business analyst wants to forecast future cost overruns and underruns.
- **C. A non-profit wants to develop a social media presence.**
- **OB. An e-commerce provider wants to make personalized recommendations.**

Answer: C

Explanation:

Developing a social media presence for a non-profit is best served by non-AI solutions. This task primarily involves content creation, community engagement, and strategic planning, which are effectively managed by human expertise and traditional marketing tools. AI is more suitable for tasks requiring automation, large-scale data analysis, and personalized recommendations, such as e-commerce personalization, forecasting cost overruns, or automating customer service responses. NEW QUESTION # 170

CASE STUDY

Please use the following answer the next question:

XYZ Corp., a premier payroll services company that employs thousands of people globally, is embarking on a new hiring campaign and wants to implement policies and procedures to identify and retain the best talent. The new talent will help the company's product team expand its payroll offerings to companies in the healthcare and transportation sectors, including in Asia.

It has become time consuming and expensive for HR to review all resumes, and they are concerned that human reviewers might be susceptible to bias.

Address these concerns, the company is considering using a third-party AI tool to screen resumes and assist with hiring. They have been talking to several vendors about possibly obtaining a third-party AI-enabled hiring solution, as long as it would achieve its goals and comply with all applicable laws.

The organization has a large procurement team that is responsible for the contracting of technology solutions.

One of the procurement team's goals is to reduce costs, and it often prefers lower-cost solutions. Others within the company are responsible for integrating and deploying technology solutions into the organization's operations in a responsible, cost-effective manner.

The organization is aware of the risks presented by AI hiring tools and wants to mitigate them. It also questions how best to organize and train its existing personnel to use the AI hiring tool responsibly. Their concerns are heightened by the fact that relevant laws vary across jurisdictions and continue to change.

If XYZ does not deploy and use the AI hiring tool responsibly in the United States, its liability would likely increase under all of the following laws EXCEPT?

- A. Anti-discrimination laws.
- **B. Product liability laws.**
- C. Privacy laws.
- D. Accessibility laws.

Answer: B

Explanation:

In the United States, the use of AI hiring tools must comply with anti-discrimination laws, accessibility laws, and privacy laws to avoid increasing liability. Anti-discrimination laws (A) ensure that hiring practices do not unlawfully discriminate against protected classes. Accessibility laws (C) require that hiring tools are accessible to all applicants, including those with disabilities. Privacy laws (D) govern the handling of personal data during the hiring process. Product liability laws (B), however, typically apply to the safety and reliability of physical products and would not generally increase liability specifically related to the responsible use of AI hiring tools in the employment context.

NEW QUESTION # 171

In procuring an AI system from a vendor, which of the following would be important to include in a contract to enable proper oversight and auditing of the system?

- **A. Appropriate access to data and models.**
- B. Responsibility for improvements.
- C. Liability for mistakes.

- D. Ownership of data and outputs.

Answer: A

Explanation:

Ensuring oversight and auditability requires that the organization has sufficient access to data, documentation, and model internals or outputs necessary for evaluation.

From the AI Governance in Practice Report 2024:

"Access to technical documentation and system internals is essential to enable effective auditing, conformity checks, and accountability mechanisms." (p. 11, 34)

- * A is about liability, not auditability.
- * B matters for IP rights, not oversight.
- * C relates to lifecycle responsibility but doesn't guarantee audit access.

NEW QUESTION # 172

A US company has developed an AI system, CrimeBuster 9619, that collects information about incarcerated individuals to help parole boards predict whether someone is likely to commit another crime if released from prison.

When considering expanding to the EU market, this type of technology would?

- A. Be subject approval by the relevant EU authority.
- **B. Be banned under the EU AI Act.**
- C. Require a detailed conformity assessment.
- D. Require the company to register the tool with the EU database.

Answer: B

Explanation:

Under the EU AI Act, high-risk AI systems like CrimeBuster 9619 would require a detailed conformity assessment before being deployed in the EU market. This assessment ensures that the AI system complies with all relevant regulations and standards, addressing potential risks related to privacy, security, and discrimination. The company would not need to register the tool with the EU database (A), seek approval from an EU authority (B), or face a ban (D) as long as it meets the necessary conformity requirements.

NEW QUESTION # 173

What type of organizational risk is associated with AI's resource-intensive computing demands?

- A. People risk.
- B. Security risk.
- **C. Environmental risk.**
- D. Third-party risk.

Answer: C

Explanation:

AI's resource-intensive computing demands contribute to increased energy consumption and carbon footprint, which are environmental risks for the organization.

NEW QUESTION # 174
