Topic 7	<ul style="list-style-type: none"><li>TOGAF Business Scenario method: The focal point of this OGBA-101 exam topic is the application of the TOGAF Business Scenario method.</li></ul>

## The Open Group TOGAF Business Architecture Foundation Exam Sample Questions (Q76-Q81):

### NEW QUESTION # 76

Which approach to modeling business value is designed to create an end-to-end perspective of value from the customer's perspective?

- A. Value chains
- B. Lean value streams
- C. Value streams
- D. Value networks

**Answer: C**

Explanation:

A value stream is an approach to modeling business value that focuses on the end-to-end sequence of activities that an organization performs to deliver a product or service to the customer. This perspective is designed to help organizations understand the full lifecycle of value creation, from the initial customer demand to the final delivery of value. It provides a holistic view of the flow of value through the organization and is instrumental in identifying areas of waste and opportunities for improvement to enhance the overall customer experience. Value streams help in visualizing and optimizing the steps necessary to effect change in the business processes and systems that create value for the customers.

### NEW QUESTION # 77

Where are business scenarios used most prominently in the TOGAF ADM?

- A. They are used as part of a business transformation readiness assessment in Phase E.
- B. They are used as part of the lessons learned activity at the end of Phase F.

- C. They are used in the Phase A to discover and document business requirements.
- D. They are used to resolve impacts across the Architecture Landscape in Phases B, C, and D.

**Answer: C**

Explanation:

Business scenarios are most prominently used in Phase A (Architecture Vision) of the TOGAF ADM. In this phase, they help in discovering and documenting business requirements by providing detailed and realistic descriptions of business situations. Business scenarios help in identifying the key business drivers, goals, and challenges, ensuring that the architecture development is aligned with the actual needs of the business.

#### NEW QUESTION # 78

Complete the sentence. The four dimensions used to scope an architecture are:

- A. Strategy, Segment, Capability, Budget
- B. Strategy, Portfolio, Project, Solution Delivery
- C. Breadth, Depth, Time Period, Architecture Domains
- D. Business, Data, Application, Technology

**Answer: C**

Explanation:

In TOGAF, the dimensions for scoping an architecture are Breadth (coverage across the organization), Depth (level of detail), Time Period (horizon of the architecture), and Architecture Domains (the four architecture domains of Business, Data, Application, and Technology). These dimensions ensure comprehensive scoping and contextual alignment.

References: TOGAF Standard, Chapter on Scoping the Architecture.

According to TOGAF, defining the scope of an architecture involves considering these four key dimensions:

\* Breadth: This refers to how much of the enterprise is covered by the architecture. It defines the boundaries of the architecture, which could range from a single department to the entire organization, or even extending to external partners.

\* Depth: This dimension determines the level of detail included in the architecture. It can range from high-level conceptual models to detailed specifications of individual components.

\* Time Period: This specifies the timeframe for the architecture, including the intended lifespan of the architecture and any planned phases or iterations. It addresses questions like "What is the architecture for now?" and "What should the architecture look like in the future?"

\* Architecture Domains: This dimension defines which of the four architecture domains (Business, Data, Application, Technology) are included in the scope. The selection of domains depends on the specific needs and objectives of the architecture development effort.

#### NEW QUESTION # 79

Which of the following best describes where business scenarios are used in the TOGAF ADM?

- A. They are used as part of a business transformation readiness assessment in Phase E.
- B. They are used in the Preliminary Phase, Phase A, and Phase B.
- C. They are used as part of the lessons learned activity at the end of Phase F.
- D. They are used to resolve impacts across the Architecture Landscape in Phases B, C, and D.

**Answer: B**

Explanation:

According to the TOGAF Standard, business scenarios are an important technique that may be used at various stages of the enterprise architecture, principally the Architecture Vision and the Business Architecture, but in other architecture domains as well, if required, to derive the characteristics of the architecture directly from the high-level requirements of the business<sup>1</sup>. The Architecture Vision is developed in Phase A, and the Business Architecture is developed in Phase B. The Preliminary Phase is also a stage where business scenarios can be used to help identify and understand business needs<sup>2</sup>.

#### NEW QUESTION # 80

Consider the following modeling example, relating business capabilities to organization units so as to highlight duplication and redundancy:

□

(Note in this example the cells colored green, yellow, and red, are also marked G, Y, and R, respectively) Which of the following best describes this technique?

- A. Capability Mapping
- **B. Relationship Mapping**
- C. Perspective Analysis
- D. Gap Analysis

**Answer: B**

Explanation:

The technique shown in the example is called relationship mapping. It is a technique that can be used to show how a business architecture addresses stakeholder concerns across different parts of an organization<sup>2</sup>. It can highlight gaps or overlaps in the coverage of stakeholder concerns by a business architecture. In this case, the technique is used to relate business capabilities to organization units so as to highlight duplication and redundancy.

This modeling technique is referred to as Relationship Mapping. It's used to relate business capabilities to organizational units to highlight areas of duplication and redundancy, as well as to indicate where capabilities are being performed well (green), where there are potential issues (yellow), and where there are significant problems or gaps (red). This visualization helps in understanding the alignment between organizational units and capabilities, and where improvements or changes may be needed.

5.2.1 Capability/Organization Mapping [https://pubs.opengroup.org/togaf-standard/business-architecture/business-capabilities.html#\\_Toc95135898](https://pubs.opengroup.org/togaf-standard/business-architecture/business-capabilities.html#_Toc95135898)

## NEW QUESTION # 81

.....

In the information era, IT industry is catching more and more attention. In the society which has a galaxy of talents, there is still lack of IT talents. Many companies need IT talents, and generally, they investigate IT talents's ability in according to what IT related authentication certificate they have. So having some IT related authentication certificate is welcomed by many companies. But these authentication certificate are not very easy to get. The Open Group OGBA-101 is a quite difficult certification exams. Although a lot of people participate in The Open Group OGBA-101 exam, the pass rate is not very high.
