Reliable C_BW4H_2505 Exam Blueprint, Test C_BW4H_2505 Lab Questions

NOTE: Each correct selection is worth one point.

Required secrets:
- Certificate
- Personal access token
- Shared Access Authorization token
- Username and password

Storage location:
- Azure Data Lake
- Azure Key Vault
- Azure Storage with HTTP access
- Azure Storage with HTTPS access

Answer:

Required secrets:
- Certificate
- Personal access token
- **Shared Access Authorization token**
- Username and password

Storage location:
- Azure Data Lake
- Azure Key Vault
- Azure Storage with HTTP access
- **Azure Storage with HTTPS access**

Explanation:
Every request made against a storage service must be authorized, unless the request is for a blob or container resource that has been made available for public or signed access. One option for authorizing a request is by using Shared Key.
Scenario: The mobile applications must be able to call the share pricing service of the existing retirement fund management system. Until the system is upgraded, the service will only support basic authentication over HTTPS.
The investment planning applications suite will include one multi-tier web application and two iOS mobile application. One mobile application will be used by employees; the other will be used by customers.
Reference: https://docs.microsoft.com/en-us/rest/api/storageservices/authorize-with-shared-key

Question: 3

What's more, part of that Actual4Labs C_BW4H_2505 dumps now are free: https://drive.google.com/open?id=1Ti5N9G4NbCvtUC_1WnjVZmjL_Tgbc14f

Our SAP Certified Associate - Data Engineer - SAP BW/4HANA study question has high quality. So there is all effective and central practice for you to prepare for your test. With our professional ability, we can accord to the necessary testing points to edit C_BW4H_2505 exam questions. With many years work experience, we have fast reaction speed to market change and need. In this way, we have the Latest C_BW4H_2505 Test Guide. You don't worry about that how to keep up with the market trend, just follow us. In addition to the industry trends, the C_BW4H_2505 test guide is written by lots of past materials' rigorous analyses.

SAP C_BW4H_2505 Exam Syllabus Topics:

Topic	Details
Topic 1	• SAP Analytics Tools and SAP Analytics Cloud: This section evaluates the skills of SAP Consultants in using tools like SAP Analytics Cloud, Lumira, and Analysis for Office to visualize and interpret data. It focuses on the consultant's ability to apply business intelligence tools within the SAP ecosystem.
Topic 2	• SAP BW Query Design: This section of the exam assesses the ability of Data Engineers to create and run queries using SAP BW • 4HANA. It evaluates how well candidates can work with query components to retrieve and structure data effectively for reporting and analysis.

Topic 3	• Data Acquisition into SAP HANA: This section evaluates the capacity of SAP Consultants to integrate various data sources into SAP HANA. It assesses their ability to understand different ingestion techniques and ensure data accessibility for processing.
Topic 4	• Native SAP HANA Modeling:This section evaluates the ability of SAP Consultants to describe and apply native modeling options in SAP HANA. It emphasizes understanding how to build optimized data structures directly within the HANA platform.
Topic 5	• SAP BW • 4HANA Modeling:This section targets the skills of Data Engineers in selecting appropriate modeling options and applying best practices like LSA++ within SAP BW • 4HANA. It focuses on designing scalable, high-performing data models.
Topic 6	• SAP BW • 4HANA Data Flow: This section of the exam measures the practical ability of SAP Consultants to load data within the SAP BW • 4HANA environment. It assesses familiarity with data movement and transformation processes across different layers of the system.
Topic 7	• InfoObjects and InfoProviders:This section tests the knowledge of Data Engineers in working with InfoObjects and InfoProviders in SAP BW • 4HANA. It involves handling data structures used for organizing, storing, and accessing analytical data.
Topic 8	• Data Acquisition into SAP BW • 4HANA: This section tests how Data Engineers manage data integration into SAP BW • 4HANA from multiple sources. It covers essential knowledge of tools and processes used for data extraction, transformation, and loading into the SAP environment.
Topic 9	• SAP BW • 4HANA Project and the Modeling Process:This section of the exam assesses how Data Engineers guide and contribute to SAP BW • 4HANA projects. It includes knowledge of modeling workflows, project lifecycle stages, and collaboration strategies within project teams.

Test C_BW4H_2505 Lab Questions | C_BW4H_2505 Latest Exam Price

Do you still worry about that you can't find an ideal job and earn low wage? Do you still complaint that your working abilities can't be recognized and you have not been promoted for a long time? You can try to obtain the C_BW4H_2505 certification and if you pass the exam you will have a high possibility to find a good job with a high income. If you buy our C_BW4H_2505 questions torrent you will pass the exam easily and successfully. Our C_BW4H_2505 Study Materials are compiled by experts and approved by professionals with experiences for many years. We provide 3 versions for the client to choose and free update. Different version boosts different advantage and please read the introduction of each version carefully before your purchase.

SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q64-Q69):

NEW QUESTION # 64
In SAP Web IDE for SAP HANA you have imported a project including an HDB module with calculation views. What do you need to do in the project settings before you can successfully build the HDB module?

- A. Define a package.
- B. Generate the HDI container.
- C. Change the schema name
- D. Assign a space.

Answer: B

Explanation:
In SAP Web IDE for SAP HANA, when working with an HDB module that includes calculation views, certain configurations must be completed in the project settings to ensure a successful build. Below is an explanation of the correct answer and why the other options are incorrect.
B). Generate the HDI containerTheHDI (HANA Deployment Infrastructure)container is a critical component for deploying and managing database artifacts (e.g., tables, views, procedures) in SAP HANA. It acts as an isolated environment where the database objects are deployed and executed. Before building an HDB module, you must generate the HDI container to ensure that the necessary runtime environment is available for deploying the calculation views and other database artifacts.
* Steps to Generate the HDI Container:
* In SAP Web IDE for SAP HANA, navigate to the project settings.
* Under the "SAP HANA Database Module" section, configure the HDI container by specifying the required details (e.g., container name, schema).
* Save the settings and deploy the container.
* The SAP HANA Developer Guide explicitly states that generating the HDI container is a prerequisite for building and deploying HDB modules. This process ensures that the artifacts are correctly deployed to the SAP HANA database.
Incorrect OptionsA. Define a packageDefining a package is not a requirement for building an HDB module.
Packages are typically used in SAP BW/4HANA or ABAP environments to organize development objects, but they are not relevant in the context of SAP Web IDE for SAP HANA or HDB modules.
Reference: The SAP Web IDE for SAP HANA documentation does not mention packages as part of the project settings for HDB modules.
C). Assign a spaceAssigning a space is related to Cloud Foundry environments, where spaces are used to organize applications and services within an organization. While spaces are important for deploying applications in SAP Business Technology Platform (BTP), they are not directly related to building HDB modules in SAP Web IDE for SAP HANA.
Reference: The SAP BTP documentation discusses spaces in the context of application deployment, but this concept is not applicable to HDB module builds.
D). Change the schema nameChanging the schema name is not a mandatory step before building an HDB module. The schema name is typically defined during the configuration of the HDI container or inherited from the default settings. Unless there is a specific requirement to use a custom schema, changing the schema name is unnecessary.
Reference: The SAP HANA Developer Guide confirms that schema management is handled automatically by the HDI container unless explicitly customized.
ConclusionThe correct action required before successfully building an HDB module in SAP Web IDE for SAP HANA is:Generate the HDI container.
This step ensures that the necessary runtime environment is available for deploying and executing the calculation views and other database artifacts. By following this process, developers can seamlessly integrate their HDB modules with the SAP HANA database and leverage its advanced capabilities for data modeling and analytics.

NEW QUESTION # 65
Which tasks require access to the BW bridge cockpit? Note: There are 2 correct answers to this question.

* A. Create source systems
* B. Create communication systems
* C. Set up Software components
* D. Create transport requests

Answer: B,C

Explanation:
* BW Bridge Cockpit: The BW Bridge Cockpit is a central interface for managing the integration between SAP BW/4HANA and SAP Datasphere (formerly SAP Data Warehouse Cloud). It provides tools for setting up software components, communication systems, and other configurations required for seamless data exchange.
* Tasks in BW Bridge Cockpit:
* Software Components: These are logical units that encapsulate metadata and data models for transfer between SAP BW/4HANA and SAP Datasphere. Setting them up requires access to the BW Bridge Cockpit.
* Communication Systems: These define the connection details (e.g., host, credentials) for external systems like SAP Datasphere.
Creating or configuring these systems is done in the BW Bridge Cockpit.
* Transport Requests: These are managed within the SAP BW/4HANA system itself, not in the BW Bridge Cockpit.
* Source Systems: These are configured in the SAP BW/4HANA system using transaction codes like RSA1, not in the BW Bridge Cockpit.

* A. Create transport requests:This task is performed in the SAP BW/4HANA system using standard transport management tools (e.g., SE09, SE10). It does not require access to the BW Bridge Cockpit.
Incorrect.
* B. Set up Software components:Software components are essential for transferring metadata and data models between SAP BW/4HANA and SAP Datasphere. Setting them up requires access to the BW Bridge Cockpit.Correct.
* C. Create source systems:Source systems are configured in the SAP BW/4HANA system using transaction RSA1 or similar tools. This task does not involve the BW Bridge Cockpit.Incorrect.
* D. Create communication systems:Communication systems define the connection details for external systems like SAP Datasphere. Configuring these systems is a key task in the BW Bridge Cockpit.
Correct.
* B: Setting up software components is a core function of the BW Bridge Cockpit, enabling seamless integration between SAP BW/4HANA and SAP Datasphere.
* D: Creating communication systems is another critical task in the BW Bridge Cockpit, as it ensures proper connectivity with external systems.
References:SAP BW/4HANA Integration Documentation: The official documentation outlines the role of the BW Bridge Cockpit in managing software components and communication systems.
SAP Note on BW Bridge Cockpit: Notes such as 3089751 provide detailed guidance on tasks performed in the BW Bridge Cockpit.
SAP Best Practices for Hybrid Integration: These guidelines highlight the importance of software components and communication systems in hybrid landscapes.
By leveraging the BW Bridge Cockpit, administrators can efficiently manage the integration between SAP BW/4HANA and SAP Datasphere.

NEW QUESTION # 66
In an SAP HANA smart data integration flowgraph, which transformation options are available?Note: There are 3 correctanswers to this question.

- A. Call an ABAP function module
- B. Split datasets
- C. Combine datasets
- D. Run an SAP HANA analysis process
- E. Inctude a stored procedure

Answer: B,C,E

NEW QUESTION # 67
What are the prerequisites for deleting business partner attribute master data in SAP BW/4HANA? Note:
There are 2 correct answers to this question.

- A. There must be no transaction data in a DataStore Object (advanced) referring to business partner values that should be deleted.
- B. There must be no BW query as InfoProvider in SAP BW/4HANA that uses business partner as a free characteristic.
- C. In SAP BW/4HANA there must be no analysis authorizations related to business partner values that should be deleted
- D. In SAP BW/4HANA there must be no hierarchy data related to business partner values that should be deleted.

Answer: A,C

Explanation:
Deleting master data in SAP BW/4HANA requires careful consideration of dependencies to ensure data integrity and system stability. Below is a detailed explanation of the prerequisites for deleting business partner attribute master data:
* Explanation: While it is important to ensure that queries do not rely on specific master data values, this is not a strict prerequisite for deleting master data. Queries using business partner as a free characteristic will not prevent the deletion of master data, as long as there are no active dependencies such as transaction data or authorizations tied to those values.
* SAP BW/4HANA allows master data deletion even if queries reference the characteristic, provided there are no underlying dependencies like transaction data or authorizations.
Option B: In SAP BW/4HANA there must be no hierarchy data related to business partner values that should be deletedExplanation: While hierarchy data can be associated with master data, the presence of hierarchies does not directly prevent the deletion of master data. Hierarchies can be adjusted or removed independently of the master data deletion process. Therefore, this is not a prerequisite.

Reference: SAP documentation does not list hierarchy data as a blocking factor for master data deletion unless the hierarchy itself has active dependencies.

Option C: There must be no transaction data in a DataStore Object (advanced) referring to business partner values that should be deletedExplanation: Transaction data in a DataStore Object (advanced) creates a dependency on the master data. If transaction data references specific business partner values, those values cannot be deleted until the transaction data is either archived or removed. This ensures data consistency and prevents orphaned records.

Reference: SAP BW/4HANA enforces this rule to maintain referential integrity between master data and transactional data. Deleting master data without addressing transaction data would lead to inconsistencies.

Option D: In SAP BW/4HANA there must be no analysis authorizations related to business partner values that should be deletedExplanation: Analysis authorizations define access restrictions based on master data values. If analysis authorizations are configured to restrict access using specific business partner values, those values cannot be deleted until the authorizations are updated or removed. This ensures that security settings remain valid and consistent.

Reference: SAP BW/4HANA checks for dependencies in analysis authorizations before allowing master data deletion. Failing to address these dependencies can result in authorization errors.

NEW QUESTION # 68

You have an existing field-based data flow that follows the layered scalable architecture (LSA++) concept. To meet a new urgent business requirement for field you want to leverage a hierarchy of an existing characteristic without changing the transformation. How can you achieve this? Note: There are 2 correct answers to this question.

- A. Add the characteristic to the DataStore object (advanced)
- B. Assign hierarchy properties to the field in the BW Query
- C. Associate the field with the characteristic in the Open ODS View
- D. Associate the field with the characteristic in the CompositeProvider

Answer: B,D

Explanation:
To meet a new urgent business requirement for leveraging an existing characteristic's hierarchy without changing the transformation, you can achieve this by using specific features of SAP BW/4HANA. Below is a detailed explanation of how each option works and why the verified answers are correct.

* Field-Based Data Flow:Field-based data flows in SAP BW/4HANA allow you to process data at the field level rather than the entire record. This approach provides flexibility in handling specific fields independently.

* Hierarchy in SAP BW/4HANA:Hierarchies in SAP BW/4HANA are used to organize master data into structured levels (e.g., organizational hierarchies like departments or product categories). They enable advanced reporting capabilities, such as drill-downs and roll-ups.

* Layered Scalable Architecture (LSA++):LSA++ is a modern data warehousing architecture that simplifies data modeling and ensures scalability. It includes layers like the Open ODS View, DataStore Object (advanced), and CompositeProvider, which play specific roles in data processing and reporting.

* Transformation Independence:The requirement specifies that the transformation should not be changed.
This means you need to leverage existing objects and configurations without modifying the underlying data flow logic.
Key Concepts:
* Why Correct?In SAP BW/4HANA, hierarchies can be directly assigned to fields in a BW Query. This allows you to use the hierarchy of an existing characteristic without altering the transformation or data flow. By assigning hierarchy properties in the query, you enable hierarchical reporting capabilities (e.g., drill-downs) for the field.
* How It Works:
* Navigate to the BW Query Designer.
* Select the field that corresponds to the characteristic.
* Assign the hierarchy properties to the field, enabling hierarchical navigation in reports.
* Advantages:
* No changes to the underlying data flow or transformation.
* Quick implementation since it leverages existing query capabilities.
* Why Incorrect?Adding the characteristic to the DataStore object (advanced) would require modifying the data flow and transformation, which violates the requirement to avoid changes to the transformation. This approach is not suitable for meeting the urgent business requirement without impacting the existing setup.
* Why Incorrect?Associating the field with the characteristic in the Open ODS View would also involve changes to the data flow or transformation. Since the Open ODS View is part of the data acquisition layer, any modification here would impact the upstream data flow, which is not allowed in this scenario.
* Why Correct?A CompositeProvider in SAP BW/4HANA combines data from multiple sources (e.g., DataStore Objects, InfoProviders) into a single logical view. You can associate the field with the characteristic in the CompositeProvider without

modifying the transformation. This allows you to leverage the hierarchy of the existing characteristic for reporting purposes.
* How It Works:
* Navigate to the CompositeProvider configuration.
* Map the field to the characteristic that has the required hierarchy.
* Use the CompositeProvider in your queries to enable hierarchical reporting.
* Advantages:
* No changes to the transformation or data flow.
* Leverages the existing CompositeProvider structure for flexibility.
Verified Answer Explanation:Option A: Assign hierarchy properties to the field in the BW QueryOption B:
Add the characteristic to the DataStore object (advanced)Option C: Associate the field with the characteristic in the Open ODS
ViewOption D: Associate the field with the characteristic in the CompositeProvider
* SAP BW/4HANA Modeling Guide:The guide explains how to assign hierarchy properties in BW Queries and associate fields with
characteristics in CompositeProviders. It emphasizes the importance of leveraging these features without modifying transformations.
* SAP Note 2700850:This note highlights best practices for using hierarchies in SAP BW/4HANA and provides guidance on
implementing them in queries and CompositeProviders.
* SAP Best Practices for BW/4HANA:SAP recommends using BW Queries and CompositeProviders to meet urgent business
requirements without altering the underlying data flow. These approaches ensure minimal disruption to existing processes.
SAP Documentation and References:
Practical Implications:When faced with urgent business requirements:
* UseBW Queriesto assign hierarchy properties to fields for quick implementation.
* LeverageCompositeProvidersto associate fields with characteristics without modifying transformations.
* Avoid making changes to the DataStore object or Open ODS View unless absolutely necessary, as these changes can impact the
entire data flow.
By following these practices, you can meet business needs efficiently while maintaining the integrity of your data architecture.
