Salesforce Certified Experience Cloud Consultant Sample Questions (Q127-Q132):

NEW QUESTION # 127

Cloud Kicks (CK) is planning to introduce a User Acceptance Testing (UAT) process to ensure quality. UAT will take place In Partial and Full sandboxes. OC has also set up the Salesforce content Delivery Network (CDN) for its domain in production environment.

What should CK keep in mind about salesforce CDN?

- A. Salesforce CDH is only supported in Developer sandbox environments

- B. Salesforce CDN is only supported in Full sandbox environments.
- **C. Salesforce CDN is not supported in sandbox environments.**
- D. Salesforce CDN is supported in all sandbox environment

Answer: C

Explanation:

CK should keep in mind that Salesforce CDN is not supported in sandbox environments. Salesforce CDN is a feature that allows CK to improve the performance of its site by caching static resources on servers that are closer to CK's site visitors. However, this feature is only available in production environments and not in sandbox environments, such as Partial and Full sandboxes. Therefore, CK should not use Salesforce CDN for its UAT process.

NEW QUESTION # 128

Ursa Major Solar (UMS) is building a portal for its premium B2B customers, Customer will be able to access their account information, open cases, download NDAs, and create dashboards Which user license allows UMS to meet these requirements?

- A. Channel Account
- **B. Platform Portal**
- C. Customer Community
- D. Commerce Portal

Answer: B

Explanation:

Platform Portal is a user license type that allows users to access custom objects and a subset of standard CRM objects, such as accounts, contacts, cases, and dashboards. This license type is suitable for UMS's premium B2B customers who need to access their account information, open cases, download NDAs, and create dashboards.

NEW QUESTION # 129

What is required when creating portal users through Just-Time (JIT) provisioning?

- **A. FederationIdentifier**
- B. User.Role
- C. FirstName
- D. Organization_id

Answer: A

Explanation:

The requirement when creating portal users through Just-In-Time (JIT) provisioning is A. JIT provisioning is a feature that allows you to create portal users on demand when they log in using an external identity provider, such as Facebook or Google. To use JIT provisioning, you need to have a FederationIdentifier field on the user object, which is a unique identifier that links the portal user with the external identity provider.

The FederationIdentifier field must match the value of the NameID element in the SAML assertion sent by the identity provider.

NEW QUESTION # 130

Ursa Major Solar would like its Experience Cloud site's guest users to benefit from the suggestions that come from autocomplete on search terms.

How should the administrator configure this?

- A. Use the Developer Console to add code to allow for autocomplete functionality.
- B. In the Hero component property editor, open the Search Results section and click desired objects to appear in autocomplete. Select "publicly available".
- **C. In the Search component property editor, open the Autocomplete section and click desired objects to appear in autocomplete. Select "publicly available".**
- D. In Salesforce Setup, type "support settings" in the quickfind box. Under the Autocomplete header, select the objects to appear in autocomplete for guest users.

Answer: C

Explanation:

To enable autocomplete for guest users, the administrator should use the Search component property editor, open the Autocomplete section, and click desired objects to appear in autocomplete. Select "publicly available". Autocomplete is a feature that suggests search terms based on what users type in the search box.

The Search component property editor is a tool that allows you to customize the settings and behavior of the Search component on your Experience Cloud site. By selecting "publicly available", you can make autocomplete suggestions visible to guest users who are not logged in.

NEW QUESTION # 131

Cloud Kicks (CK) is launching a new public marketing site. The company expects a large volume of traffic and wants to ensure its site performs well. CK also wants repeat visitors to have the fastest browsing experience possible.

What should CK do to get the best performing site?

- A. Schedule Apex jobs to push content to users' browser caches.
- B. Disable Visualforce to make all pages switch to Lightning.
- C. Use Next Best Action to predict what content to serve to the user's browser.
- **D. Enable and configure the Content Delivery Network so that public content is cached.**

Answer: D

Explanation:

The Content Delivery Network (CDN) is a feature that improves the performance of public sites by caching static content, such as images, CSS files, and JavaScript files, on servers that are closer to the site visitors.

This reduces the load on the Salesforce servers and speeds up the page loading time. CK can enable and configure the CDN from Experience Builder settings.

NEW QUESTION # 132

.....

Our website is considered to be the top test seller of EX-Con-101 practice materials, and gives you the best knowledge of the content of the syllabus of EX-Con-101 preparation materials.
