CFA Institute Certificate in ESG Investing Sample Questions (Q137-Q142):

NEW QUESTION # 137

Which of the following subclasses is most likely to have the highest level of ESG integration using Mercer's ratings?

- A. Investment-grade credit
- B. High-yield credit
- C. Sovereign debt

Answer: A

Explanation:

ESG Integration using Mercer's Ratings:

Mercer's ratings assess the level of ESG integration across various asset classes and subclasses. Investment-grade credit is most likely to have the highest level of ESG integration compared to sovereign debt and high-yield credit.

1. Investment-Grade Credit: Investment-grade credit typically involves higher-quality issuers with better credit ratings and stronger financial stability. These issuers are more likely to integrate ESG factors into their operations and disclosures, as they often face greater scrutiny from investors and regulatory bodies.

Additionally, ESG integration is more prevalent in investment-grade credit due to the higher availability of ESG data and metrics for these issuers.

2. Sovereign Debt: While ESG considerations are increasingly applied to sovereign debt, the level of integration varies significantly by country. Some governments may prioritize ESG factors, while others may not, leading to a lower overall level of ESG integration compared to investment-grade credit.

3. High-Yield Credit: High-yield credit involves issuers with lower credit ratings and higher risk profiles.

These issuers may have less capacity or incentive to integrate ESG factors compared to investment-grade issuers, leading to lower levels of ESG integration.

References from CFA ESG Investing:

ESG Integration in Credit Markets: The CFA Institute discusses how ESG integration varies across different segments of the credit market. Investment-grade credit typically exhibits higher levels of ESG integration due to better data availability and higher investor demand for sustainable practices.

Mercer's Ratings: Mercer's ESG ratings emphasize the importance of integrating ESG factors into investment processes, with investment-grade credit generally leading in ESG integration efforts.

NEW QUESTION # 138

With respect to ESG integration in private equity, which of the following is most likely a challenge an investor may face?

- A. Lack of strategy and long-term orientation from private equity managers
- B. Reporting frameworks that do not account for the relative lack of transparency found in private markets relative to public markets
- C. Lack of capacity within the investee company to fulfill ESG reporting requirements

Answer: C

Explanation:

Integrating ESG factors into private equity investments can be challenging due to various factors, including the capabilities and resources of the investee companies.

1. Capacity for ESG Reporting: Private equity investee companies often lack the capacity to fulfill ESG reporting requirements. These companies may not have the necessary resources, expertise, or infrastructure to collect, analyze, and report on ESG metrics, making it difficult for private equity investors to obtain reliable ESG data.

2. Long-Term Orientation and Transparency:

Strategy and Long-Term Orientation (Option A): Private equity managers typically focus on long-term value creation, which aligns with the objectives of ESG integration. Therefore, the lack of long-term orientation is less likely to be a significant challenge.

Reporting Frameworks (Option C): While reporting frameworks may pose challenges, the primary issue is often the lack of capacity within investee companies to meet these requirements.

Reference from CFA ESG Investing:

ESG Reporting Capacity: The CFA Institute discusses the challenges related to the capacity of private equity investee companies to fulfill ESG reporting requirements. This includes the lack of dedicated resources and expertise necessary to implement robust ESG reporting systems.

Private Equity ESG Integration: Understanding the specific challenges faced in private equity ESG integration helps investors develop strategies to address these issues, such as providing support and resources to investee companies.

In conclusion, the lack of capacity within the investee company to fulfill ESG reporting requirements is most likely a challenge an investor may face in ESG integration in private equity, making option B the verified answer.

NEW QUESTION # 139

Primary ESG data can be sourced:

- A. Both from public documents and directly from companies.
- B. Only directly from companies.
- C. Only from public documents.

Answer: A

Explanation:

Primary ESG data is obtained from both public documents and direct company disclosures (Option C), including:

Sustainability reports, financial filings, regulatory disclosures (public documents).

Company surveys, management interviews, direct engagement (company sources).

Option A is incorrect because ESG analysts often require direct engagement to get non-public data.

Option B is incorrect because some ESG data (e.g., emissions data, labor policies) is publicly disclosed in regulatory filings.

- A. easier portability of approaches and principles methods from developed markets.
- B. fewer opportunities for investors to engage with companies and improve ESG performance.

Answer: C

Explanation:

ESG investing in emerging markets is more challenging due to limited availability of data, variability in reporting standards, and differences in governance practices between countries and companies. (ESGTextBook
