ASIS Physical Security Professional Exam Sample Questions (Q264-Q269):

NEW QUESTION # 264

The balanced magnetic switch differs from the simple magnetic switch in that it:

- A. Must be mounted at an angle
- **B. Is harder to defeat**
- C. Is meant to be used on non-ferrous doors such as aluminum or wood
- D. Must be used in pairs

Answer: B

Explanation:

Balanced magnetic switches are designed to be more resistant to tampering than simple magnetic switches.

They include additional magnetic elements and polarity configurations that make it difficult for an intruder to manipulate the circuit with an external magnet.

A is true for both types of switches.

B and C are incorrect technical descriptions for balanced switches.

NEW QUESTION # 265

The process of ensuring that the information is not manipulated in an unauthorized way or corrupted, thus diminishing its value and utility to the organization is called:

- A. Availability
- **B. Integrity**
- C. Analysis
- D. Security

Answer: B

Explanation:

Integrity, in the context of information security, refers to ensuring data is accurate, consistent, and unaltered by unauthorized actions. Maintaining integrity prevents data manipulation or corruption, ensuring reliability for organizational decision-making.

Analysis (A) is the process of evaluating data.

Security (C) is a broader term encompassing integrity, confidentiality, and availability.

Availability (D) ensures access but does not guard against data tampering.
