Deep-Security-Professional Test Score Report, Deep-Security-Professional New Learning Materials

You may be complaining that your work abilities can't be recognized or you have not been promoted for a long time. But if you try to pass the Deep-Security-Professional exam you will have a high possibility to find a good job with a high income. That is why I suggest that you should purchase our Deep-Security-Professional questions torrent. Once you purchase and learn our Deep-Security-Professional Exam Materials, you will find it is just a piece of cake to pass the exam and get a better job. You can read the introduction of our Deep-Security-Professional exam questions carefully before your purchase. We provide the best service to you and hope you will be satisfied.

Trend Micro Certified Professional for Deep Security Sample Questions (Q38-Q43):

NEW QUESTION # 38

Which of the following VMware components is not required to enable agentless protection using Deep Security.

- A. VMware NSX
- B. VMware ESXi
- C. VMware vRealize
- D. VMware vCenter

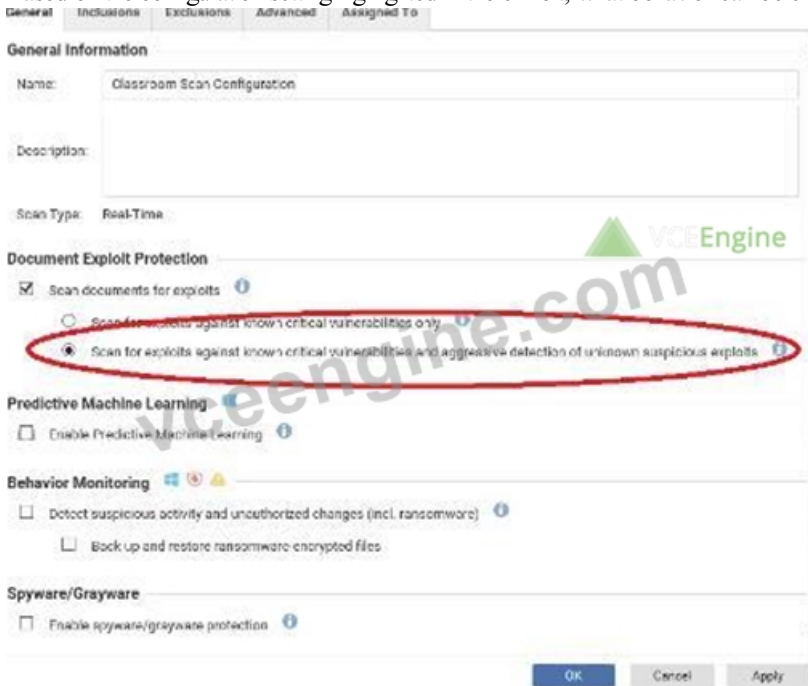

Answer: C

Explanation:

Integrate with VMware vRealize Operations Manager

NEW QUESTION # 39

Based on the configuration setting highlighted in the exhibit, what behavior can be expected during a malware scan?

- A. With the highlighted setting enabled, Deep Security Agents will scan files for known viruses and malware using patterns and any files deemed suspicious will be submitted to a configured Deep Discovery Analyzer for further analysis.
- B. With the highlighted setting enabled, Deep Security Agents will scan files for known malware as well as newly encountered malware by accessing the Suspicious Objects List.
- C. With the highlighted setting enabled, Deep Security Agents will scan files for viruses and malware using supplementary aggressive detection pattern files.
- D. With the highlighted setting enabled, Deep Security Agents will scan files for unknown malware using Predictive Machine Learning.

Answer: C

Explanation:

The highlighted option specifies, "Scan for exploits against known critical vulnerabilities and aggressive detection of unknown suspicious exploits." This means the agent uses additional, more aggressive detection patterns to identify not just known exploits but also suspicious and unknown exploit techniques in document files. Predictive Machine Learning and Suspicious Objects List are separate features, and Deep Discovery Analyzer integration is not referenced by this setting.

NEW QUESTION # 40

The Overrides settings for a computer are displayed in the exhibit. Which of the following statements is true regarding the displayed

configuration?

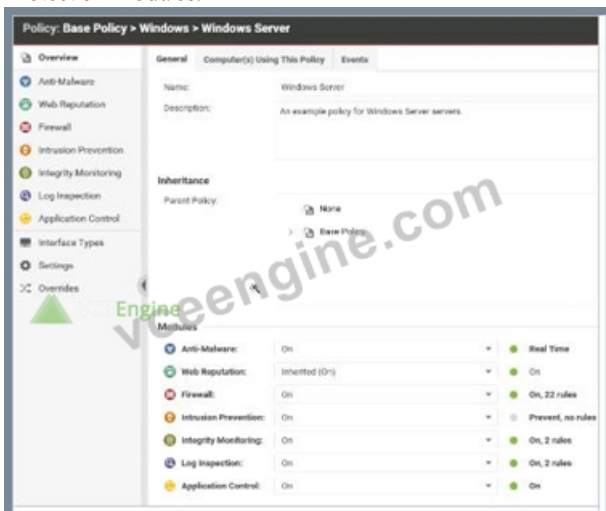

- A. The Protection Modules identified as Inherited in the exhibit have not yet been enabled. Only the Web Reputation and Application Control Protection Modules have been enabled at this point.
- B. The configuration for the Protection Modules is inherited from the policy assigned to this computer, except for the configuration of the Web Reputation and Application Control Protection Modules which have been set at the computer level.
- C. The Protection Modules identified as Inherited in the exhibit have not yet been configured. Only the Web Reputation and Application Control Protection Modules have been configured.
- D. The Web Reputation and Application Control Protection Modules have been assigned a different policy than the other Protection Modules and as a result, are displayed with overrides.

Answer: C

NEW QUESTION # 41

In the policy displayed in the exhibit, the state of the Web Reputation Protection Module is set to "Inherited (On)", while the state for the other Protection Module is set to "On". Why is the Web Reputation Protection Module displayed differently than the other Protection Modules.

- A. In this example, the state for the Web Reputation Protection Module is inherited from the parent policy, while the other Protection Modules were turned on specifically in this child policy.
- B. The state for a Protection Module is always displayed as "Inherited (On)" until the module components are installed on the Deep Security Agent.
- C. In this example, the state for the Web Reputation Protection Module is listed as "Inherited (On)" as it was inherited from the default setting in the Base Policy.
- D. In this example, the state for the Web Reputation Protection Module is inherited from the parent policy, while the other

Protection Modules were turned on at the computer level.

Answer: A

NEW QUESTION # 42

Which of the following is NOT an operation that can be performed on Deep Security resources using the API?

- A. PUT
- **B. VIEW**
- C. GET
- D. POST

Answer: B

Explanation:

Trend Micro Deep Security APIs use standard RESTful operations:

GET (retrieve resource)

POST (create resource)

PUT (update resource)

DELETE (remove resource)

"VIEW" is not a standard HTTP method nor an operation in the Deep Security API context.

From the official documentation:

"The Deep Security API supports standard HTTP methods for interacting with resources: GET, POST, PUT, and DELETE."
