## CompTIA A+ Core 1 Exam (2026) Sample Questions (Q248-Q253):

### NEW QUESTION # 248

Which of the following options offers the best connectivity performance with limited necessary accessories?

- A. Bluetooth
- B. Lightning cable
- C. NFC
- D. Hotspot

**Answer: D**

Explanation:

A hotspot provides full network connectivity by sharing a cellular data connection wirelessly, requiring minimal accessories beyond the device itself, and offers better performance than short-range technologies like Bluetooth or NFC.

### NEW QUESTION # 249

Which of the following should be used when installing network cabling above a drop ceiling that is part of the shared air space?

- A. Optical
- B. Shielded twisted
- C. Plenum-rated
- D. Coaxial

**Answer: C**

Explanation:

Plenum-rated cable uses a low-smoke, fire-resistant jacket designed for use in plenum spaces (shared air handling areas) to meet building and fire codes.

### NEW QUESTION # 250

Which of the following is a characteristic of a Type 1 hypervisor?

- A. Bare-metal server installation
- B. Local configuration options
- C. Host OS required
- D. Lightweight OS

**Answer: A**

Explanation:

A Type 1 hypervisor is known as a bare-metal hypervisor because it installs directly on the physical server hardware without requiring a traditional host operating system underneath it. This architecture is a key characteristic emphasized in CompTIA A+ Core 1 virtualization concepts. By running directly on the hardware, a Type 1 hypervisor generally offers better performance, stronger isolation, and improved stability compared to hosted virtualization because there is less overhead from an additional OS layer. It also allows the hypervisor to manage CPU, memory, storage, and networking resources more efficiently for multiple virtual machines. Option A describes a Type 2 (hosted) hypervisor, which relies on an existing host OS (like Windows, macOS, or Linux) and runs as an application. Option C, "lightweight OS," can be misleading—some Type 1 hypervisors include a minimal management layer, but the defining point is direct installation on the hardware, not simply being lightweight. Option D is not a distinguishing feature because both Type 1 and Type 2 solutions can offer local configuration tools. Therefore, the best answer is Bare-metal server installation.

### NEW QUESTION # 251

A major retailer is moving its online shopping website to the cloud and wants to expand its server resources as needed during busier shopping days. Which of the following should the retailer consider?

- A. Availability
- B. Multitenancy
- C. Location
- D. Elasticity

**Answer: D**

Explanation:

Elasticity in cloud computing refers to the ability to automatically scale resources up or down based on demand, making it ideal for businesses with fluctuating workloads.

From CompTIA A+ 220-1101 Official Study Guide, Objective 3.7 - Cloud characteristics:

"Elasticity allows cloud customers to quickly and automatically scale computing resources in response to changing demand." Verified Source:

### NEW QUESTION # 252

Which of the following systems most likely contains ECC memory?

- A. A high-end gaming console
- B. A laptop
- C. A smartphone
- **D. A file server**

**Answer: D**

Explanation:

Error-Correcting Code (ECC) memory is designed to detect and correct single-bit memory errors, increasing system reliability and data integrity. According to CompTIA Core 1 (220-1201) hardware and memory objectives, ECC memory is most commonly used in servers and enterprise-grade systems where uptime and data accuracy are critical.

A file server is responsible for storing, managing, and serving data to many users simultaneously. Memory errors in such systems could lead to data corruption, crashes, or security issues. For this reason, servers frequently use ECC memory in combination with server-class CPUs and motherboards that support error correction.

High-end gaming consoles prioritize performance and cost efficiency rather than fault tolerance, and they do not use ECC memory. Smartphones rely on low-power mobile RAM without error correction, and laptops typically use non-ECC memory unless they are specialized workstation-class systems, which is not indicated in this question.

CompTIA emphasizes that ECC memory is associated with mission-critical environments, particularly servers and enterprise systems, making a file server the most appropriate answer.
