It's crucial to have reliable Databricks Databricks-Certified-Data-Engineer-Associate exam questions and practice test to prepare for the Databricks-Certified-Data-Engineer-Associate Exam. Real4Prep offers real Databricks Databricks-Certified-Data-Engineer-Associate exam questions with accurate answers in our Databricks-Certified-Data-Engineer-Associate practice exam format. Our Databricks-Certified-Data-Engineer-Associate Practice Questions and answers resemble the actual Databricks Databricks-Certified-Data-Engineer-Associate questions, and they have been verified by experts to ensure your success in the Databricks Certified Data Engineer Associate Exam with ease.

Are you worried about your poor life now and again? Are you desired to gain a decent job in the near future? Do you dream of a better life? Do you want to own better treatment in the field? If your answer is yes, please prepare for the Databricks-Certified-Data-Engineer-Associate Exam. It is known to us that preparing for the exam carefully and getting the related certification are very important for all people to achieve their dreams in the near future.

Quiz 2026 High Hit-Rate Databricks Databricks-Certified-Data-Engineer-Associate Test Tutorials

In order to meet the needs of all customers, our company employed a lot of leading experts and professors in the field. These

experts and professors have designed our Databricks-Certified-Data-Engineer-Associate exam questions with a high quality for our customers. We can promise that our Databricks-Certified-Data-Engineer-Associate training guide will be suitable for all people, including students and workers and so on. You can use our Databricks-Certified-Data-Engineer-Associate study materials whichever level you are in right now. And we can promise you will get success by our products.

Databricks Certified Data Engineer Associate Exam Sample Questions (Q88-Q93):

NEW QUESTION # 88

In which of the following file formats is data from Delta Lake tables primarily stored?

- A. A proprietary, optimized format specific to Databricks
- **B. Parquet**
- C. Delta
- D. CSV
- E. JSON

Answer: B

Explanation:

Delta Lake is an open source project that provides ACID transactions, time travel, and other features on top of Apache Parquet, a columnar file format that is widely used for big data analytics. Delta Lake uses versioned Parquet files to store your data in your cloud storage, along with JSON files as transaction logs and checkpoint files to track the changes and ensure data integrity. Delta Lake is compatible with any Apache Hive compatible file format, such as CSV, JSON, or AVRO, but it primarily stores data as Parquet files for better performance and compression. Reference: How to Create Delta Lake tables, 5 reasons to choose Delta Lake format (on Databricks), Parquet vs Delta format in Azure Data Lake Gen 2 store, What is Delta Lake? - Azure Databricks, Lakehouse and Delta tables - Microsoft Fabric

NEW QUESTION # 89

An organization is looking for an optimized storage layer that supports ACID transactions and schema enforcement. Which technology should the organization use?

- A. Unity Catalog
- **B. Data lake**
- C. Cloud File Storage
- D. Delta Lake

Answer: B

NEW QUESTION # 90

Which of the following commands can be used to write data into a Delta table while avoiding the writing of duplicate records?

- A. IGNORE
- B. DROP
- **C. MERGE**
- D. APPEND
- E. INSERT

Answer: C

Explanation:

The MERGE command can be used to upsert data from a source table, view, or DataFrame into a target Delta table. It allows you to specify conditions for matching and updating existing records, and inserting new records when no match is found. This way, you can avoid writing duplicate records into a Delta table¹. The other commands (DROP, IGNORE, APPEND, INSERT) do not have this functionality and may result in duplicate records or data loss²³⁴. References: 1: Upsert into a Delta Lake table using merge | Databricks on AWS 2: SQL DELETE | Databricks on AWS 3: SQL INSERT INTO | Databricks on AWS 4: SQL UPDATE | Databricks on AWS

NEW QUESTION # 91

A data engineer has joined an existing project and they see the following query in the project repository:

```
CREATE STREAMING LIVE TABLE loyal_customers AS
```

```
SELECT customer_id -
```

```
FROM STREAM(LIVE.customers)
```

```
WHERE loyalty_level = 'high';
```

Which of the following describes why the STREAM function is included in the query?

- A. The customers table is a reference to a Structured Streaming query on a PySpark DataFrame.
- B. The data in the customers table has been updated since its last run.
- C. The STREAM function is not needed and will cause an error.
- D. The table being created is a live table.
- **E. The customers table is a streaming live table.**

Answer: E

Explanation:

The STREAM function is used to process data from a streaming live table or view, which is a table or view that contains data that has been added only since the last pipeline update. Streaming live tables and views are stateful, meaning that they retain the state of the previous pipeline run and only process new data based on the current query. This is useful for incremental processing of streaming or batch data sources. The customers table in the query is a streaming live table, which means that it contains the latest data from the source. The STREAM function enables the query to read the data from the customers table incrementally and create another streaming live table named loyal_customers, which contains the customer IDs of the customers with high loyalty level.

Reference: Difference between LIVE TABLE and STREAMING LIVE TABLE, CREATE STREAMING TABLE, Load data using streaming tables in Databricks SQL.

NEW QUESTION # 92

In which of the following scenarios should a data engineer use the MERGE INTO command instead of the INSERT INTO command?

- A. When the source is not a Delta table
- B. When the source table can be deleted
- C. When the location of the data needs to be changed
- **D. When the target table cannot contain duplicate records**
- E. When the target table is an external table

Answer: D

Explanation:

Explanation

With merge, you can avoid inserting the duplicate records. The dataset containing the new logs needs to be deduplicated within itself. By the SQL semantics of merge, it matches and deduplicates the new data with the existing data in the table, but if there is duplicate data within the new dataset, it is

inserted.<https://docs.databricks.com/en/delta/merge.html#:~:text=With%20merge%20%2C%20you%20can%20a>

NEW QUESTION # 93

.....

Real4Prep informs you that the Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) questions regularly change the content of the Databricks Certified Data Engineer Associate Exam real exam. Therefore, you must stay informed as per these changes to save time, money, and mental peace. As was already discussed, Real4Prep satisfies the needs of Databricks Databricks-Certified-Data-Engineer-Associate Exam candidates. The customer will receive updates of Databricks Certified Data Engineer Associate Exam (Databricks-Certified-Data-Engineer-Associate) real dumps for up to 365 days after buying the product.
