Candidates who pass the exam receive a digital badge and a certificate that they can use to show their AWS expertise to potential employers.

## Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q165-Q170):

### NEW QUESTION # 165

A developer deploys an ecommerce application on Amazon EC2 instances behind an Application Load Balancer (ALB). The instances run in an Amazon EC2 Auto Scaling group. The EC2 instances are based on an Amazon Machine Image (AMI) that uses an Amazon Elastic Block Store (Amazon EBS) root volume. After deployment, the developer notices that a third of the instances seem to be idle. These instances are not receiving requests from the load balancer. The developer verifies that all the instances are registered with the load balancer. The developer must implement a solution to allow the EC2 instances to receive requests from the load balancer.

Which action will meet this requirement?

- A. Use the instance refresh feature to redeploy the EC2 Auto Scaling group.
- B. Restart the EC2 instances that are not receiving traffic.
- C. Reregister the failed instances with the ALB.
- D. Enable all Availability Zones for the ALB.

**Answer: A**

Explanation:

### NEW QUESTION # 166

A user has an S3 object in the US Standard region with the content "color=red". The user updates the object with the content as "color=white". If the user tries to read the value 1 minute after it was uploaded, what will S3 return?

- A. It will return an error saying that the object was not found
- B. It may return either "color=red" or "color=white" i.e. any of the value
- C. It will return "color=red"
- D. It will return "color=white"

**Answer: B**

Explanation:

AWS S3 follows the eventual consistent model in the US Standard Region. Once the object is updated it may return the new value or the old value based on whether all the content is replicated across multiple servers until it becomes consistent (eventual).

<http://docs.aws.amazon.com/AmazonS3/latest/dev/Introduction.html>

### NEW QUESTION # 167

A company is adding stored value for gift card) capability to its highly popular casual gaming website. Users need to be able to trade this value for other users' items on the platform. This would require both users' records be updated as a single transaction, or both users' records to be completely rolled back.

Which AWS database options can provide the transactional capability required for this new feature? (Select TWO )

- A. Amazon DynamoDB with operations made with the ConsistentRead parameter set to true
- B. Amazon Aurora MySQL with operations made within a transaction block
- C. Amazon Redshift with operations made within a transaction block
- D. Amazon ElastiCache for Memcached with operations made within a transaction block
- E. Amazon DynamoDB with reads and writes made using Transact" operations

**Answer: B,E**

### NEW QUESTION # 168

A user wants to achieve High Availability with PostgreSQL DB. Which of the below mentioned functionalities helps achieve HA?

- A. PostgreSQL does not support HA
- **B. Multi AZ**
- C. Multi region
- D. Read Replica

**Answer: B**

Explanation:

The Multi AZ feature allows the user to achieve High Availability. For Multi AZ, Amazon RDS automatically provisions and maintains a synchronous "standby" replica in a different Availability Zone.  
Reference: <http://docs.aws.amazon.com/AmazonRDS/latest/UserGuide/Welcome.html>

### NEW QUESTION # 169

A developer is writing an application that will process data delivered into an Amazon S3 bucket. The data is delivered approximately 10 times a day, and the developer expects the data will be processed in less than 1 minute, on average. How can the developer deploy and invoke the application with the lowest cost and lowest latency?

- **A. Deploy the application as an AWS Lambda function and invoke it with an S3 event notification.**
- B. Deploy the application onto an Amazon EC2 instance and have it poll the S3 bucket for new objects.
- C. Deploy the application as an AWS Lambda function and invoke it with an Amazon CloudWatch scheduled event.
- D. Deploy the application as an AWS Lambda function and invoke it with an Amazon CloudWatch alarm triggered by an S3 object upload.

**Answer: A**

Explanation:
