

VMware 3V0-24.25 Practice Exam Pdf & 3V0-24.25 Exam Certification Cost

3V0-24.25	
Language:	English
Duration:	135 minutes
Number of	60 (multiple choice)
Passing Score:	300 (Scaled)
Fee:	\$250 USD

P.S. Free & New 3V0-24.25 dumps are available on Google Drive shared by PremiumVCEDump: <https://drive.google.com/open?id=1wfty-3LgdOfmhqjQyM1sWkeF7sUh4lby>

The passing rate of our study material is very high, and it is about 99%. We provide free download and tryout of the 3V0-24.25 question torrent, and we will update the 3V0-24.25 exam torrent frequently to guarantee that you can get enough test bank and follow the trend in the theory and the practice. We provide 3 versions for you to choose thus you can choose the most convenient method to learn. Our 3V0-24.25 Latest Questions are compiled by the experienced professionals elaborately. So it will be very convenient for you to buy our product and it will do a lot of good to you.

The PremiumVCEDump is one of the top-rated and leading platforms that have been offering a simple, smart, and easiest way to pass the challenging 3V0-24.25 exam with good scores. The VMware 3V0-24.25 Exam Questions are real, valid, and updated. These 3V0-24.25 exam practice questions are designed and verified by experienced and qualified 3V0-24.25 exam experts.

Pass Guaranteed 3V0-24.25 - Reliable Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Practice Exam Pdf

If you don't have enough time to study for your certification exam, PremiumVCEDump provides Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service 3V0-24.25 PDF Questions. You may quickly download Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service 3V0-24.25 exam questions in PDF format on your smartphone, tablet, or desktop. You can Print VMware pdf questions and answers on paper and make them portable so you can study on your own time and carry them wherever you go.

VMware Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Sample Questions (Q60-Q65):

NEW QUESTION # 60

A Cloud Administrator is tasked with resolving a complex "Split-Brain" scenario in a Zonal Supervisor deployment following a storage outage in Zone-B.

Context:

The Supervisor spans Zone-A, Zone-B, and Zone-C. A storage array failure in Zone-B caused the Supervisor Control Plane VM in that zone to become isolated and read-only. The outage is now resolved, but the Supervisor status remains Warning. TKG clusters in Zone-B are unreachable.

Review the following diagnostic data from the Supervisor:

```
# kubectl get nodes -L topology.kubernetes.io/zone
NAME STATUS ROLES ZONE
42018c-supervisor-control-plane-0 Ready master Zone-A
42018c-supervisor-control-plane-1 NotReady master Zone-B
42018c-supervisor-control-plane-2 Ready master Zone-C
```

```
# kubectl get etcd -n kube-system
```

```
NAME STATUS HEALTH
```

```
etcd-0 Healthy true
```

```
etcd-1 Unhealthy false <-- Corresponds to Zone-B node
```

```
etcd-2 Healthy true
```

The administrator determines that the etcd member in Zone-B has diverged and cannot automatically rejoin the quorum.

What is the correct recovery procedure to restore full health to the Supervisor? (Choose 2.)

- A. Restore the entire Supervisor Cluster from a Velero backup taken prior to the outage.
- **B. Delete the NotReady Control Plane VM (42018c-supervisor-control-plane-1) from the vSphere Client inventory. The vSphere Cluster Service (vCLS) / EAM will detect the missing agent and automatically redeploy a fresh Control Plane VM, forcing etcd to resync from the healthy members.**
- C. Redeploy the Supervisor Control Plane VM using the kubectl delete node 42018c-supervisor-control-plane-1 command.
- D. Use the vSphere Client to put the Supervisor into "Maintenance Mode" and then "Exit Maintenance Mode" to trigger a full cluster reconciliation.
- **E. SSH into the healthy etcd-0 node and run etcdctl member remove to manually evict the failed member, then allow the Supervisor to self-heal.**

Answer: B,E

NEW QUESTION # 61

A Platform Engineer is optimizing the IP address consumption of the NSX Advanced Load Balancer (Avi) used by a Supervisor Cluster. The current "Essentials" edition deployment consumes a new Service Engine (SE) IP and a VIP for every LoadBalancer service, leading to IP exhaustion.

The engineer wants to switch to a design where multiple Kubernetes Services share the same Service Engine group and potentially consolidate VIPs where possible (using L7 Ingress), but the immediate concern is the backend SE scaling.

Review the current setting: Service Engine Group: Default-Group Max VS per SE: 10 What configuration change on the Avi Controller would optimize resource usage for this VKS deployment? (Select all that apply.)

- **A. Increase the Max Virtual Services per Service Engine limit in the Service Engine Group settings (e.g., to 50 or 100), allowing more services to be packed onto existing SEs before spawning new ones.**
- B. Configure the IPAM Profile to use a larger subnet.
- **C. Use AKO (Avi Kubernetes Operator) features to implement L7 Ingress (sharing a single VIP/VS for multiple apps) instead of creating a type: LoadBalancer (L4) for every app.**
- D. Enable NSX-T Cloud mode in Avi instead of vCenter Cloud mode.
- E. Switch the Supervisor configuration to use HAProxy, which is more efficient.

Answer: A,C

NEW QUESTION # 62

In the context of vSphere with Tanzu, what is a Supervisor Service (formerly known as a vSphere Pod Service or Embedded Service)?

- A. It is a dedicated Tanzu Kubernetes Grid cluster provisioned for the sole purpose of running the vCenter Server Appliance.
- B. It is a standard Virtual Machine deployed by a user that runs a legacy application.
- **C. It is a certified Kubernetes operator or application (such as Harbor or Velero) that runs directly on the Supervisor Cluster to provide shared infrastructure services to tenant namespaces.**
- D. It is a hardware-accelerated function provided by a DPU (Data Processing Unit) to offload NSX routing.

Answer: C

NEW QUESTION # 63

A Platform Engineer is deploying a StatefulSet in a vSphere Namespace. The application requires "Gold" tier storage which is backed by an All-Flash vSAN cluster. The vSphere Administrator has already created the "Gold-Storage-Policy" in vCenter.

Review the Namespace configuration:

Namespace: app-prod

Storage Policies:

- Silver-Storage-Policy (Default)
- Gold-Storage-Policy

What must the engineer specify in the PersistentVolumeClaim (PVC) manifest to ensure the volume is provisioned on the All-Flash vSAN using the correct policy?

- A. volumeMode: Block
- B. storageClassName: Gold-Storage-Policy
- C. storageClassName: vsan-default
- D. accessModes: ReadWriteMany

Answer: B

NEW QUESTION # 64

A customer is required to enhance the security for a set of VMware vSphere Kubernetes Service (VKS) clusters that host services interacting with sensitive customer data. The solution must encrypt the transport and communications between services.

The VKS Admin recommends enabling Istio Service Mesh to satisfy the requirement. What type of encryption does Istio Service Mesh provide?

- A. mTLS
- B. IPsec with IKEv2
- C. AES 256
- D. SSH or TLS

Answer: A

Explanation:

Istio is available in VCF 9.0 as an optional package that can be installed for VKS clusters. The VCF 9.0 documentation explicitly lists "Istio" among the optional packages that "can be optionally installed" for the vSphere Kubernetes Service (VKS). In Kubernetes platforms, Istio is a service mesh that secures and manages service-to-service (east-west) traffic by establishing authenticated and encrypted connections between workloads. The encryption mechanism it provides for inter-service communication is mutual TLS (mTLS), which means both ends (client and server workloads) authenticate each other and negotiate encrypted transport for every service call-meeting the requirement to "encrypt the transport and communications between services." This is distinct from host-level mechanisms like IPsec/IKEv2 (network-layer) or "AES-256" (an algorithm, not the service-to-service transport model). Enabling Istio Service Mesh is therefore aligned to deliver encrypted, identity-aware service communications across the cluster at the application service layer.

NEW QUESTION # 65

.....

If you can get the certification for the exam, it not only can prove the ability of you but also can improve your competitive force in the job hunting market. 3V0-24.25 exam braindumps are high quality and accuracy, and we can help you pass the exam in your first attempt, otherwise we will give you refund. Moreover, 3V0-24.25 test materials contain most of the knowledge points for the exam, and you can pass the exam as well as improve your ability in the process of learning. 3V0-24.25 exam materials offer you free update for 365 days after payment, and the update version will be sent to your email automatically.
