Salesforce Order-Management-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	• Deployment and Debugging: In this area, aspiring order management administrator consultant demonstrates a deep understanding of deployment options, life cycles, and the configuration of supporting objects. This includes creating processes from scratch, leveraging pre-set data, and validating results in runtime scenarios.

Topic 2	• User Experience and Customization: This section emphasizes leveraging Salesforce's Lightning UI to enhance user experiences. The Salesforce Order Management Administrator Consultant will customize experiences for users and managers through tools like the Lightning Page Editor, Report Builder, and out-of-the-box components. Success in this area ensures optimized workflows and improved operational efficiency.
Topic 3	• Data Model: This topic equips the Salesforce Order Management Administrator Consultant to showcase knowledge of critical objects such as Order, Order Summary, Fulfillment Orders, and Return Orders. It involves establishing and tracing integrations with B2C Commerce or other systems, including custom attributes. Proficiency here is pivotal for ensuring seamless data flow and robust Order Management operations within complex business environments.
Topic 4	• Advanced Topics: This topic challenges the Salesforce Order Management Administrator Consultant to diagnose and resolve configuration issues that hinder the launch or operation of Order Management processes. Proficiency includes troubleshooting integration problems and articulating how various processes interact to support successful deployments and system functionality.
Topic 5	• Process Automation and Integrations: This section helps the Salesforce Order Management Administrator Consultant demonstrate the capability to deliver business value by integrating Order Management with external systems using clicks rather than code. Mastery of navigation within Order Management processes, connecting nodes, and integrating systems efficiently ensures understanding of how to implement effective solutions.

- D. Sales Location
- E. Accounts

Answer: B,D

NEW QUESTION # 32
An administrator is attempting to deploy a Change Set from a development org to a test org but the test org is not available in the list of target organizations. What are two reasons that could cause this issue?

- A. The components in the Change set could not be found within the test org
- B. Change Sets can only be deployed from a sandbox org to a production org, not another sandbox org.
- C. Thedevelopment org has not been approved to upload Change Sets from within the test orgD.The development org and test org are not associated with the same production org.

Answer: A,C

Explanation:
Explanation
Two possible reasons that could cause the test org to not appear in the list of target organizations are:
The components in the Change set could not be found within the test org. This means that the test org does not have the same metadata components or features as the development org, and therefore cannot receive the change set.
The development org has not been approved to upload Change Sets from within the test org. This means that there is no deployment connection between the two orgs, and the test org has not authorized the development org to send change sets to it.

NEW QUESTION # 33
How can an administrator synchronize licenses from the production org when preparing a sandbox for development?

- A. Export a Change Set
- B. Use a custom shell script
- C. Run the Match Production Licenses to Sandbox without a Refresh tool in Setup
- D. import a Change Set

Answer: C

Explanation:
Explanation
The best way for an administrator to synchronize licenses from the production org when preparing a sandbox for development is to run the Match Production Licenses to Sandbox without a Refresh tool in Setup. This tool allows administrators to match their sandbox licenses with their production licenses without refreshing their sandbox. This way, the administrator can ensure that the sandbox has the same number and type of licenses as the production org, and avoid any license-related issues when developing or testing in the sandbox.
