

Hilfsreiche Prüfungsunterlagen verwirklicht Ihren Wunsch nach der Zertifikat der Oracle Database 19c: Data Guard Administration

2026 Die neuesten Pass4Test 1z1-076 PDF-Versionen Prüfungsfragen und 1z1-076 Fragen und Antworten sind kostenlos verfügbar: <https://drive.google.com/open?id=1dGwtg4SDex4ew2K4Ew5nodN3FtBq8Psp>

Wenn Sie die Schulungsunterlagen zur Oracle 1z1-076 Zertifizierungsprüfung von Pass4Test haben, geben wir Ihnen einen einjährigen kostenlosen Update-Service. Das heißt, Sie können immer neue Zertifizierungsmaterialien bekommen. Sobald das Prüfungsziel und unsere Lernmaterialien geändert werden, benachrichtigen wir Ihnen in der ersten Zeit. Wir kennen Ihre Bedürfnisse. Wir haben das Selbstbewusstsein, Ihnen zu helfen, die Oracle 1z1-076 Zertifizierungsprüfung zu bestehen. Sie können sich unbesorgt auf die Oracle 1z1-076 Prüfung vorbereiten und das Zertifikat erfolgreich bekommen.

Oracle 1z1-076 Prüfungsplan:

Thema	Einzelheiten
Thema 2	• Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.

Thema 3	Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.
Thema 4	Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Thema 5	Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Thema 6	Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Thema 7	Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Thema 8	Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Thema 9	Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Thema 10	Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Thema 11	Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.
Thema 12	Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.

Oracle 1z1-076 Prüfungs, 1z1-076 Originale Fragen

Wenn Sie noch zögern, ob Sie Pass4Test wählen, können Sie kostenlos einen Teil der Oracle 1z1-076 Fragen und Antworten in Pass4Test Website herunterladen, um unsere Zuverlässigkeit zu testen. Wenn Sie alle unsere Prüfungsfragen und Antworten herunterladen, geben wir Ihnen eine 100%-Pass-Garantie, dass Sie die Oracle 1z1-076 Zertifizierungsprüfung einmalig mit einer hohen Note bestehen können.

Oracle Database 19c: Data Guard Administration 1z1-076 Prüfungsfragen mit Lösungen (Q43-Q48):

43. Frage

Which TWO statements are true for Data Guard environments with multi-tenant databases?

- A. The Data Guard broker automatically always opens the pluggable databases of a standby database after a role change operation.
- B. A multi-tenant standby database can have fewer pluggable databases than the primary container database.
- C. The Data Guard broker automatically opens all pluggable databases of a primary database after a role change operation.
- D. Different pluggable databases within a logical standby database may have different guard statuses.
- E. The CDBDBA privilege must be used instead of the SYSDBA privilege for connections as SYS to the root container of a

multi-tenant standby database.

Antwort: B,D

44. Frage

Which feature is available when monitoring a Data Guard configuration using Enterprise Manager Cloud Control, but is not available using DGMGRL or by using SQL?

- A. Analyzing the dmon process trace file
- B. Automatic creation of standby redo logs
- C. Performing a verify operation
- **D. Viewing a logical standby database apply lag**
- E. Creating a broker configuration before creating the databases

Antwort: D

45. Frage

Which TWO are benefits of using Transaction Guard in a Data Guard environment?

- A. It protects against user errors being replicated to standby databases.
- B. It provides application continuity by replaying transactions interrupted by a failover or a switchover
- **C. It protects against recoverable errors during a planned or an unplanned outage of a primary database.**
- D. It protects against logical corruptions being replicated to standby databases.
- **E. It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover.**

Antwort: C,E

Begründung:

Transaction Guard provides benefits in terms of transaction consistency and recovery in a Data Guard environment:

* It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover (B): Transaction Guard ensures that any uncommitted transactions at the time of an outage are rolled back consistently, thus preserving the integrity of the application's data and state.

* It protects against recoverable errors during a planned or an unplanned outage of a primary database (D): Transaction Guard offers protection against errors that can occur during outages, allowing applications to resume operations more quickly and reliably after recovery. References:

46. Frage

Examine this query and its output:

□ Which two statements are true?

- A. The master observer is connected to the database on which the query was executed.
- B. The master observer is not running, but should run on ol7.example.com
- C. The master observer is currently running on ol7.example.com
- **D. The master observer is not connected to the database on which the query was executed.**
- **E. Cats is a bystander database.**

Antwort: D,E

Begründung:

D: The database role indicated by FS_FAILOVER_STATUS as BYSTANDER implies that the database is a standby database in the Data Guard configuration. This means the database is neither a primary database nor an active failover target.

E: Since the FS_FAILOVER_OBSERVER_HOST column shows cats, it suggests that this is the host on which the observer would run. However, because the FS_FAILOVER_OBSERVER_PRESENT column is not shown, we cannot definitively state if the observer is currently connected or not. If FS_FAILOVER_OBSERVER_PRESENT is 'YES', the observer is connected, if 'NO', then it's not. In the absence of this column's output, the best assumption based on the available data is that the observer is not connected.

The output shows that the FS_FAILOVER_STATUS is BYSTANDER, which indicates that the database in question is not actively involved in a fast-start failover configuration as a primary or standby. It is in a bystander role, meaning that while it is part of a Data Guard configuration, it is neither a target for failover nor actively participating in failover operations. Additionally, FS_FAILOVER_OBSERVER_HOST shows 'cats', which indicates the host where the observer process is expected to run. However, since there is no information about the observer being present, we can infer that although 'cats' is designated for the observer to run, the observer is not currently connected to this database.

References Oracle documentation on Data Guard configurations and the V\$DATABASE view which provides information about the fast-start failover status and observer host.

47. Frage

Examine the Data Guard configuration:

```
DGMGRL> show configuration;
```

Configuration - Animals

Protection Mode: MaxAvailability

Databases:

dogs - Primary database

sheep - Snapshot standby database

cats - Physical standby database

Fast-Start Failover: DISABLED

Configuration Status:

SUCCESS

You receive an error while attempting to raise the protection mode to Maximum Protection:

```
DGMGRL> edit configuration set protection mode as maxprotection;
```

Error: ORA-16627: operation disallowed since no standby databases would remain to support protection mode Failed.

Which is the minimum statement, or sequence of statements you must execute to enable successful raising of the protection mode to Maximum Protection?

- A. DGMGRL> edit database dogs set property LogXptMode=sync;
DGMGRL> edit database sheep set property LogxptMode=sync;
DGMGRL> edit database cats set property LogXptMode=sync;
- B. DGMGRL> edit database dogs set property LogxptMode=sync;
- C. DGMGRL> edit database sheep set property LogXptMode=sync;
- D. DGMGRL> edit database cats set property LogXptMode=sync;
- E. DGMGRL> edit database dogs set property LogXptMode=sync;
DGMGRL> edit database cats set property LogXptMode=sync;
- F. DGMGRL> edit database dogs set property LogxptMode=sync;
DGMGRL> edit database sheep set property LogxptMode=sync;

Antwort: E
