

NSE5_FNC_AD-7.6 Real Exams, NSE5_FNC_AD-7.6 Exam Dump

P.S. Free 2026 Fortinet NSE5_FNC_AD-7.6 dumps are available on Google Drive shared by Actual4dump:
https://drive.google.com/open?id=13R-BFy7DhIT5bf2d55lxln_SWZeyfSnB

There are three different versions of our NSE5_FNC_AD-7.6 practice materials: the PDF, the Software and the APP online. And our NSE5_FNC_AD-7.6 learning materials can save a lot of time for its high efficiency. You can study online version of NSE5_FNC_AD-7.6 real test on the subway or on the bus; you can review it when you are lining up for a meal; you can study it before you go sleeping. At the same time, our APP version of NSE5_FNC_AD-7.6 Study Materials support offline learning, which avoids the situation that there is no way to learn without a network. So why you are still hesitating? Just come and buy it!

Fortinet NSE5_FNC_AD-7.6 actual test question is a good choice. The Fortinet NSE5_FNC_AD-7.6 PDF is the most convenient format to go through all exam questions easily. It is a compilation of actual Fortinet NSE5_FNC_AD-7.6 exam questions and answers. The PDF is also printable so you can conveniently have a hard copy of Fortinet NSE5_FNC_AD-7.6 Dumps with you on occasions when you have spare time for quick revision. The PDF is easily downloadable from our website and also has a free demo version available.

NSE5_FNC_AD-7.6 Real Exams – The Best Exam Dump for NSE5_FNC_AD-7.6: Fortinet NSE 5 - FortiNAC-F 7.6 Administrator

Annual test syllabus is essential to predicate the real NSE5_FNC_AD-7.6 questions. So you must have a whole understanding of the test syllabus. After all, you do not know the NSE5_FNC_AD-7.6 exam clearly. It must be difficult for you to prepare the NSE5_FNC_AD-7.6 exam. Then our NSE5_FNC_AD-7.6 Study Materials can give you some guidance for our professional experts have done all of these above matters for you by collecting the most accurate questions and answers. And you can have a easy time to study with them.

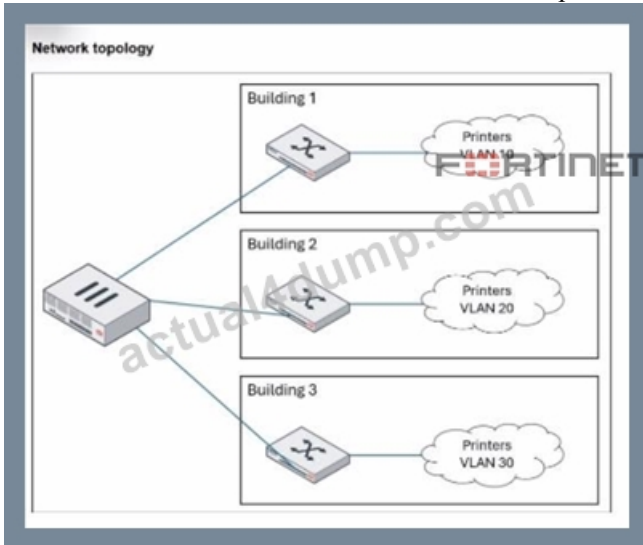

Fortinet NSE 5 - FortiNAC-F 7.6 Administrator Sample Questions (Q66-

Q71):

NEW QUESTION # 66

Refer to the exhibit. An administrator wants to use FortiNAC-F to automatically provision printers throughout their organization. Each building uses its own local VLAN for printers.

Which FortiNAC-F feature would allow this to be accomplished with a single network access policy?

- A. Device profiling rules
- B. Preferred VLAN designations
- C. Logical networks
- D. Dynamic host groups

Answer: C

Explanation:

The FortiNAC-F Logical Network feature is specifically designed to provide an abstraction layer between high-level security policies and the underlying physical network infrastructure. In large-scale deployments where different physical locations (like Building 1, 2, and 3 in the exhibit) use different local VLAN IDs for the same type of device (e.g., VLAN 10, 20, and 30 for printers), managing separate policies for each building would create significant administrative overhead.

By using a Logical Network, an administrator can create a single entity--for example, a logical network named "Printers"--and use it as the "Access Value" in a single Network Access Policy.

The mapping of this logical label to a specific physical VLAN occurs at the Model Configuration level for each network device.

When a printer connects to a switch in Building 1, FortiNAC-F evaluates the policy, identifies that the printer should be in the "Printers" logical network, and checks the Model Configuration for that specific switch to see which VLAN ID is mapped to that label (VLAN 10). If the same printer moves to Building 3, the same single policy applies, but FortiNAC-F provisions it to VLAN 30 based on the local mapping for that building's switch.

This architectural approach ensures that policies remain consistent and easy to manage regardless of the complexity or variations in the local network topology.

"Logical Networks provide a way to define a network access requirement once and apply it across many different network devices that may use different VLAN IDs for that access... Each managed device can use different VLAN IDs for the same Logical Network label. You can define the Logical Networks based on requirements and then associate the network to a VLAN ID when the managed device is configured in the Model Configuration."

NEW QUESTION # 67

How can an administrator configure FortiNAC-F to normalize incoming syslog event levels across vendors?

- A. Configure the vendor OUI settings.
- B. Configure severity mappings.
- C. Configure event to alarm mappings.
- D. Configure the security rule settings.

Answer: B

Explanation:

FortiNAC-F serves as a central manager for security events originating from a diverse ecosystem of third-party security appliances, such as FortiGate, Check Point, and Cisco. Each vendor utilizes its own internal scale for severity levels within syslog messages (e.g., Check Point uses a 1-25 scale, while others may use 0-255). To provide a consistent response regardless of the source, FortiNAC-F uses Severity Mappings to normalize these incoming values.

According to the FortiNAC-F Administration Guide, severity mappings allow the administrator to translate vendor-specific threat levels into standardized FortiNAC Security Levels (such as High, Medium, or Low Violation). When a syslog message arrives, the parser extracts the vendor's severity code, and the system immediately references the Security Event Severity Level Mappings table to determine how that event should be categorized internally. This normalization is vital because it allows a single Security Alarm to be configured to respond to any "High Violation" event, whether it was reported as a "Critical" by one vendor or a "Level 5" by another.

Without these mappings, the administrator would have to create separate, redundant security rules for every vendor to account for their different naming conventions and numerical scales.

"Each vendor defines its own severity levels for syslog messages. The following table shows the equivalent FortiNAC security level.. To normalize these events, configure the Severity Level Mappings found in the device integration guides. This allows FortiNAC to generate a consistent security event that can then trigger an alarm regardless of the reporting vendor's specific terminology."

NEW QUESTION # 68

An administrator wants to create a conference manager administrator account but would like to limit the number of conference accounts that can be generated to 30.

Which statement about conference accounts is true?

- A. The administrator can set a maximum of 30 conference accounts in the administrative profile for the conference manager.
- B. Conference account limits are defined in the conference guest and contractor template.
- C. The conference account limit is defined in the onboarding conference portal.
- D. In FortiNAC-F, conference accounts can be limited by multiples of 25, so the conference administrator could create 50 accounts.

Answer: A

Explanation:

In FortiNAC-F, the Conference Manager is a specialized administrative role designed for delegated administration, often used by receptionists or event organizers to create temporary guest accounts. To maintain security and prevent the over-provisioning of credentials, FortiNAC-F allows for granular restrictions on these accounts.

According to the FortiNAC-F Administration Guide regarding Administrative Profiles, when an administrator creates a profile for a Conference Manager, they can define specific "Account Limits." Under the profile settings (located in System > Settings > Admin Profiles), there is a field specifically for "Max Accounts." By entering "30" into this field, the administrator ensures that any user assigned to this profile cannot exceed 30 active conference accounts at any given time.

This setting is distinct from the Portal configuration or the Guest templates. While templates define the type of account (e.g., duration and access level), the Administrative Profile defines the capabilities and limitations of the person creating those accounts. This ensures that even if a guest template allows for unlimited registrations, the specific administrator is physically restricted by the system from generating more than the allotted 30.

"Administrative Profiles define what an administrator can see and do within the system. For delegated administration roles like the Conference Manager, the 'Max Accounts' field in the Administrative Profile is used to specify the maximum number of accounts the user is permitted to create. Once this limit is reached, the user will be unable to generate additional accounts until existing ones expire or are deleted."

NEW QUESTION # 69

Refer to the exhibit.

Device Profiling Rules - Total: 23										
Rank	Enabled	Rank	Name	Type	Registration	Methods	Register as Device	Confirm Rule On Connect	Confirm Rule Interval	Confirmation Failure Action
1	✓	1	IP Phones	IP Phone	Automatic	Vendor OUI	Host View	⊗	None	None
2	✓	2	Card Readers	Card Reader	Automatic	Vendor OUI	Host View	⊗	None	None
3	✓	3	Cameras in Manchester	Camera	Automatic	Location, Vendor OUI	Host View	⊗	None	None
4	✓	4	Cameras in Nashua	Camera	Automatic	Location, Vendor OUI	Host View	⊗	None	None

Which devices are automatically evaluated by these device profiling rules?

- A. Rogue devices, only when they are initially added to the database

- B. All hosts, each time they connect
- C. Known trusted devices, each time they connect
- D. Rogue devices, each time they change location

Answer: A

Explanation:

The profiling rules are configured with automatic registration and rely on vendor OUI and location methods. These rules evaluate devices when they are first identified as rogues and added to the database, at which point profiling determines whether they should be registered as devices.

NEW QUESTION # 70

Which two things must be done to allow FortiNAC to process incoming syslog messages from an unknown vendor? (Choose two.)

- A. The device must be added as a patch management server.
- **B. The device must be added as a log receiver.**
- **C. A security event parser must be created for the device.**
- D. The device sending the messages must be modeled in the Network Inventory view.

Answer: B,C

NEW QUESTION # 71

.....

It would be really helpful to purchase Fortinet NSE 5 - FortiNAC-F 7.6 Administrator (NSE5_FNC_AD-7.6) exam dumps right away. If you buy this Fortinet Certification Exams product right now, we'll provide you with up to 1 year of free updates for Fortinet NSE 5 - FortiNAC-F 7.6 Administrator (NSE5_FNC_AD-7.6) authentic questions. You can prepare using these no-cost updates in accordance with the most recent test content changes provided by the Fortinet NSE 5 - FortiNAC-F 7.6 Administrator (NSE5_FNC_AD-7.6) exam dumps.
