Do some fresh things each day that moves you out of your comfort zone. If you stay cozy every day, you will gradually become lazy. Now, you have the opportunity to change your current conditions. Our C_TS422_2023 real exam dumps are specially prepared for you. Try our C_TS422_2023 study tool and absorb new knowledge. After a period of learning, you will find that you are making progress. The knowledge you have studied on our C_TS422_2023 Exam Question will enrich your life and make you wise. Our C_TS422_2023 real exam dumps are manufactured carefully, which could endure the test of practice. Stable and healthy development is our long lasting pursuit. In order to avoid fake products, we strongly advise you to purchase our C_TS422_2023 exam question on our official website.

SAP C_TS422_2023 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Production Orders in SAP S • 4HANA: This section covers BOM item categorization, order status management, availability checks, routing selection, order type setup, and material handling processes.
Topic 2	<ul style="list-style-type: none"> • Introduction to SAP S • 4HANA Production Planning: This section covers an overview of production planning components, functions, and planning approaches. Exploration of emerging trends.
Topic 3	<ul style="list-style-type: none"> • Material Requirements Planning in SAP S • 4HANA: This part of the exam covers an examination of planning strategies, tools, and long-term planning concepts. Overview of MRP fundamentals and lot size procedures.
Topic 4	<ul style="list-style-type: none"> • Process Orders in SAP S • 4HANA: This section covers an introduction to process order components, processing, and relevant master data objects. Overview of Good Manufacturing Practices (GMP) features.
Topic 5	<ul style="list-style-type: none"> • Advanced Planning in SAP S • 4HANA: This section includes an overview of advanced planning fundamentals and master data. Explanation of key tools and processes. Discussion of planning evaluation concepts.

Pass C_TS422_2023 Exam with High-quality Brain Dump C_TS422_2023 Free by TestPassed

Our C_TS422_2023 study materials are compiled and verified by the first-rate experts in the industry domestically and they are linked closely with the real exam. Our products' contents cover the entire syllabus of the exam and refer to the past years' exam papers. Our test bank provides all the questions which may appear in the real exam and all the important information about the exam. You can use the practice test software to test whether you have mastered the C_TS422_2023 Study Materials and the function of stimulating the exam to be familiar with the real exam's pace, atmosphere and environment. So our C_TS422_2023 study materials are real-exam-based and convenient for the clients to prepare for the exam.

SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing Sample Questions (Q64-Q69):

NEW QUESTION # 64

What is the difference between coproducts byproducts?Note: There are 2 correct answers to this question.

- A. Only coproducts have movement type 101.
- B. Only coproducts have movement type 531.
- C. Only coproducts appear in the process or production order settlement rule.
- D. Only coproducts have a nonzero inventory valuation.

Answer: A,C

NEW QUESTION # 65

Which time elements can be reduced by a reduction strategy?

Note: There are 3 correct answers to this question.

- A. Queue time
- B. Wait time
- C. Goods receipt processing time
- D. Float after production
- E. Move time

Answer: A,B,E

Explanation:

A reduction strategy is a method of shortening the lead time of an order by reducing certain time elements in the order scheduling¹. The time elements that can be reduced by a reduction strategy are move time, wait time, and queue time². Move time is the time required to move a material from one operation to another. Wait time is the time between the end of an operation and the start of the next operation. Queue time is the time before an operation can start at a work center due to the work center's capacity utilization³. These time elements can be reduced by a percentage or a fixed value in the reduction strategy. Reference: 1: Reduction Strategy | SAP Help Portal(<https://blog.sap-press.com/4-strategies-for-make-to-stock-production-with-sap-s4hana>)2: 4 Strategies for Make-to-Stock Production with SAP S/4HANA(<https://blogs.sap.com/2022/03/22/highlights-for-manufacturing-in-sap-s-4hana-2021-part-2-production-planning-engineering-operations/>)3: Scheduling | SAP Help Portal(<https://blogs.sap.com/2022/04/26/manufacturing-in-sap-s-4hana-cloud-planning-strategies/>).

NEW QUESTION # 66

In the Capacity Scheduling Table, which settings can you select for the planning strategy?

Note: There are 3 correct answers to this question.

- A. Planning mode
- B. Direction
- C. Scheduling control
- D. Fixed pegging

- E. Finiteness level

Answer: B,C,E

Explanation:

The planning strategy settings in the Capacity Scheduling Table determine how the system schedules the operations or orders on the resources. You can select the following settings:

Finiteness level: This setting defines how strictly the system considers the capacity availability of the resources when scheduling. You can choose between infinite, finite, and optimized scheduling. Infinite scheduling ignores the capacity availability and schedules the operations or orders as early as possible. Finite scheduling respects the capacity availability and schedules the operations or orders only in the free slots of the resources. Optimized scheduling tries to find the best compromise between infinite and finite scheduling by minimizing the delays and overloads¹²

Scheduling control: This setting defines how the system handles the scheduling conflicts that may arise when scheduling the operations or orders. You can choose between rescheduling, shifting, and splitting. Rescheduling means that the system moves the conflicting operations or orders to a later date. Shifting means that the system moves the conflicting operations or orders to another resource within the same resource network. Splitting means that the system splits the conflicting operations or orders into smaller parts and schedules them on different resources or dates¹³

Direction: This setting defines the direction of the scheduling. You can choose between forward and backward scheduling. Forward scheduling means that the system schedules the operations or orders from the start date to the end date. Backward scheduling means that the system schedules the operations or orders from the end date to the start date¹⁴

NEW QUESTION # 67

Your company manufactures materials whose specifications differ for each manufacturing process. Which application do you have to use in SAP S/4HANA to be able to track and use this information in all areas of logistics?

- A. Batch management
- B. Engineering change management
- C. Quality management
- D. Process order management

Answer: A

Explanation:

You have to use batch management in SAP S/4HANA to be able to track and use the information about materials whose specifications differ for each manufacturing process in all areas of logistics. Batch management is a function that allows you to manage materials that are produced or procured in batches, where each batch has a unique identifier and can have different characteristics or specifications. With batch management, you can:

Define the batch characteristics and specifications for each material, such as color, potency, or shelf life.

Assign a batch number to each batch of material and record the batch characteristics and specifications in the batch master record.

Use the batch number as a key for tracking and tracing the batch throughout the logistics processes, such as goods receipt, production, quality inspection, goods issue, or delivery.

Use the batch characteristics and specifications as criteria for batch determination, which is a function that automatically selects the suitable batches for a requirement based on predefined rules and conditions.

Use the batch characteristics and specifications as input for batch valuation, which is a function that allows you to value batches of the same material differently based on their quality or market value.

NEW QUESTION # 68

Which business processes are affected by settings in the order type dependent parameters? Note: There are 2 correct answers to this question.

- A. Select master data.
- B. Define integration with cost accounting.
- C. Check material availability.
- D. Schedule production orders.

Answer: A,B

NEW QUESTION # 69

.....

If you are always complaining that you are too spread, are overwhelmed with the job at hand, and struggle to figure out how to prioritize your efforts, these would be the basic problem of low efficiency and production. You will never doubt anymore with our C_TS422_2023 Test Prep. Moreover, we have experts to update C_TS422_2023 quiz torrent in terms of theories and contents according to the changeable world on a daily basis, which can ensure that you are not falling behind of others by some slight knowledge gaps.
