APMG-International Agile Project Management (AgilePM) Foundation Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which purpose relates to the instrumental Success Factors?

- A. Positions DSDM projects for a successful outcome
- B. Underpins the prioritization of requirements
- C. Informs the development of the Business Case
- D. Inform the development of the Terms of Reference

Answer: A

Explanation:

Instrumental Success Factors (ISFs) in DSDM are crucial as they position projects for a successful outcome. ISFs are the critical elements that must be in place for a DSDM project to succeed. They provide a foundation for effective project management and delivery, ensuring that all necessary conditions are met to support the project's objectives and deliverables.

NEW QUESTION # 31

During what phase should the strategy for Iterative Development be considered?

- A. Evolutionary Development
- B. Pre-Project
- C. Feasibility
- D. Foundations

Answer: D

Explanation:

The strategy for Iterative Development should be considered during the Foundations phase. This phase establishes a firm foundation for the project, ensuring that only the right projects are started and that they are set up correctly, considering aspects such as feasibility and business case. It's crucial to have a clear strategy for Iterative Development at this stage to guide the subsequent phases of the project effectively.

NEW QUESTION # 32

Which information is given in the Solution Architecture Definition?

- A. The tools and standards to be used in Evolutionary Development
- B. The strategy for testing
- C. A snapshot of the evolving business, solution and management products
- D. A high-level design framework for the solution.

Answer: C

NEW QUESTION # 33

In combination with Scrum, what does AgilePM provide for Scrum Masters?

- A. An opportunity to serve the organization by leading, training, and coaching the organization in its Scrum adoption
- B. An incremental and evolutionary approach to product development that evolves with time
- C. A framework that helps teams generate value through adaptive solutions for complex problems
- D. A set of practices, tools, techniques, and methods to enhance the use of Scrum

Answer: D

Explanation:

Scrum supplies the core framework (roles, events, artifacts) for empirically building products, but it is intentionally lightweight. AgilePM (based on DSDM) complements Scrum by offering a well-tested pool of practices, tools, and techniques that strengthen day-to-day delivery and governance without altering Scrum's essence. Typical enhancements include MoSCoW prioritization to manage variable scope, timeboxing to protect cadence, facilitated workshops and modeling to accelerate shared understanding, and explicit roles for business involvement to improve decision flow. AgilePM also provides guidance on project-level controls-such as business cases, incremental release planning, and benefits focus-that sit outside Scrum's product-delivery scope. For a Scrum Master, this combination is valuable: Scrum remains the engine of iterative delivery, while AgilePM offers practical methods to refine backlog refinement, clarify acceptance criteria, manage dependencies, and support predictable delivery against time and cost constraints. Thus, the pairing gives Scrum Masters a richer toolkit to coach teams, align stakeholders, and handle real-world project contexts where governance, prioritization, and incremental release structures are needed-precisely what option B describes.

NEW QUESTION # 34

How is contingency typically managed in a DSDM project?

- A. Managed by varying time and cost
- B. Allowed adding a percentage to the high-level estimates.
- C. Not needed in a DSDM project.
- D. Managed by varying the features to be delivered.

Answer: D
