

100% Pass The Best Microsoft - Examcollection DP-700 Questions Answers

P.S. Free & New DP-700 dumps are available on Google Drive shared by DumpsMaterials: <https://drive.google.com/open?id=1Yeo63-oy2hglJyEAOWu6GAwA0qWRo232>

We would like to provide our customers with different kinds of DP-700 practice torrent to learn, and help them accumulate knowledge and enhance their ability. Besides, we guarantee that the questions of all our users can be answered by professional personal in the shortest time with our DP-700 study guide. One more to mention, we can help you make full use of your sporadic time to absorb knowledge and information. In a word, compared to other similar companies aiming at DP-700 Test Prep, the services and quality of our DP-700 exam questions are highly regarded by our customers and potential clients.

Microsoft DP-700 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Implement and manage an analytics solution: This section of the exam measures the skills of Microsoft Data Analysts regarding configuring various workspace settings in Microsoft Fabric. It focuses on setting up Microsoft Fabric workspaces, including Spark and domain workspace configurations, as well as implementing lifecycle management and version control. One skill to be measured is creating deployment pipelines for analytics solutions.
Topic 2	<ul style="list-style-type: none">• Monitor and optimize an analytics solution: This section of the exam measures the skills of Data Analysts in monitoring various components of analytics solutions in Microsoft Fabric. It focuses on tracking data ingestion, transformation processes, and semantic model refreshes while configuring alerts for error resolution. One skill to be measured is identifying performance bottlenecks in analytics workflows.
Topic 3	<ul style="list-style-type: none">• Ingest and transform data: This section of the exam measures the skills of Data Engineers that cover designing and implementing data loading patterns. It emphasizes preparing data for loading into dimensional models, handling batch and streaming data ingestion, and transforming data using various methods. A skill to be measured is applying appropriate transformation techniques to ensure data quality.

The Best Accurate Examcollection DP-700 Questions Answers Help You to Get Acquainted with Real DP-700 Exam Simulation

After decades of hard work, our products are currently in a leading position in the same kind of education market, our DP-700

learning materials, with their excellent quality and constantly improved operating system, In many areas won the unanimous endorsement of many international customers. Advanced operating systems enable users to quickly log in and use, in constant practice and theoretical research, our DP-700 learning materials have come up with more efficient operating system to meet user needs, so we can assure users here , after user payment , users can perform a review of the DP-700 Exam in real time , because our advanced operating system will immediately send users DP-700 learning material to the email address where they are paying , this greatly facilitates the user, lets the user be able to save more study time.

Microsoft Implementing Data Engineering Solutions Using Microsoft Fabric Sample Questions (Q53-Q58):

NEW QUESTION # 53

DRAG DROP

You have a Fabric eventhouse that contains a KQL database. The database contains a table named TaxiData.

The following is a sample of the data in TaxiData.

You need to build two KQL queries. The solution must meet the following requirements:

One of the queries must partition RunningTotalAmount by VendorID.

The other query must create a column named FirstPickupDateTime that shows the first value of each hour from tpep_pickup_datetime partitioned by payment_type.

How should you complete each query? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Partition the RunningTotalAmount by VendorID. - Row_cumsum

The Row_cumsum function computes the cumulative sum of a column while optionally restarting the accumulation based on a condition. In this case, it calculates the cumulative sum of total_amount for each VendorID, restarting when the VendorID changes (VendorID != prev(VendorID)).

Create a column FirstPickupDateTime that shows the first value of each hour from tpep_pickup_datetime, partitioned by payment_type - Row_window_session

NEW QUESTION # 54

You have a Fabric workspace named Workspace1 that contains a notebook named Notebook1.

In Workspace1, you create a new notebook named Notebook2.

You need to ensure that you can attach Notebook2 to the same Apache Spark session as Notebook1.

What should you do?

- A. Enable high concurrency for notebooks.
- B. Enable dynamic allocation for the Spark pool.
- C. Increase the number of executors.
- D. Change the runtime version.

Answer: A

Explanation:

To ensure that Notebook2 can attach to the same Apache Spark session as Notebook1, you need to enable high concurrency for notebooks. High concurrency allows multiple notebooks to share a Spark session, enabling them to run within the same Spark context and thus share resources like cached data, session state, and compute capabilities. This is particularly useful when you need notebooks to run in sequence or together while leveraging shared resources.

NEW QUESTION # 55

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the

review screen.

You have a Fabric eventstream that loads data into a table named `Bike_Location` in a KQL database. The table contains the following columns:

`BikepointID`
`Street`
`Neighbourhood`
`No_Bikes`
`No_Empty_Docks`
`Timestamp`

You need to apply transformation and filter logic to prepare the data for consumption. The solution must return data for a neighbourhood named `Sands End` when `No_Bikes` is at least 15. The results must be ordered by `No_Bikes` in ascending order.

Solution: You use the following code segment:

Does this meet the goal?

- A. no
- B. Yes

Answer: B

Explanation:

Filter Condition: It correctly filters rows where `Neighbourhood` is "Sands End" and `No_Bikes` is greater than or equal to 15.

Sorting: The sorting is explicitly done by `No_Bikes` in ascending order using `sort by No_Bikes asc`.

Projection: It projects the required columns (`BikepointID`, `Street`, `Neighbourhood`, `No_Bikes`, `No_Empty_Docks`, `Timestamp`), which minimizes the data returned for consumption.

NEW QUESTION # 56

You have a Google Cloud Storage (GCS) container named `storage1` that contains the files shown in the following table.

You have a Fabric workspace named `Workspace1` that has the cache for shortcuts enabled. `Workspace1` contains a lakehouse named `Lakehouse1`. `Lakehouse1` has the shortcuts shown in the following table.

You need to read data from all the shortcuts.

Which shortcuts will retrieve data from the cache?

- A. Products, Stores, and Trips
- B. Products and Trips only
- C. Products only
- D. Stores only
- E. Trips only
- F. Stores and Products only

Answer: F

Explanation:

When reading data from shortcuts in Fabric (in this case, from a lakehouse like `Lakehouse1`), the cache for shortcuts helps by storing the data locally for quick access. The last accessed timestamp and the cache expiration rules determine whether data is fetched from the cache or from the source (Google Cloud Storage, in this case).

Products: The `ProductFile.parquet` was last accessed 12 hours ago. Since the cache has data available for up to 12 hours, it is likely that this data will be retrieved from the cache, as it hasn't been too long since it was last accessed.

Stores: The `StoreFile.json` was last accessed 4 hours ago, which is within the cache retention period.

Therefore, this data will also be retrieved from the cache.

Trips: The `TripsFile.csv` was last accessed 48 hours ago. Given that it's outside the typical caching window (assuming the cache has a maximum retention period of around 24 hours), it would not be retrieved from the cache. Instead, it will likely require a fresh read from the source.

NEW QUESTION # 57

You need to populate the `MAR1` data in the bronze layer.

Which two types of activities should you include in the pipeline? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Copy data
- B. Stored procedure
- C. ForEach
- D. WebHook

Answer: A,C

Explanation:

MAR1 has seven entities, each accessible via a different API endpoint. A ForEach activity is required to iterate over these endpoints to fetch data from each one. It enables dynamic execution of API calls for each entity.

The Copy data activity is the primary mechanism to extract data from REST APIs and load it into the bronze layer in Delta format. It supports native connectors for REST APIs and Delta, minimizing development effort.

NEW QUESTION # 58

.....

If you want to make your IT dream come true, you just need to choose the professional training materials. DumpsMaterials is a professional website to provide IT certification training materials. Our DP-700 exam training materials is the result of DumpsMaterials's experienced IT experts with constant exploration, practice and research for many years. After you purchase our DP-700 Dumps PDF training materials, we will provide one year free renewal service.
