Reliable HPE7-A01 Exam Camp & New HPE7-A01 Braindumps Free

If you want to sail through the difficult HP HPE7-A01 Exam, it would never do to give up using exam-related materials when you prepare for your exam. If you would like to find the best certification training dumps that suit you, Dupleader is the best place to go. Dupleader is a well known and has many excellent exam dumps that relate to IT certification test. Moreover all exam dumps give free demo download. If you want to know whether Dupleader practice test dumps suit you, you can download free demo to experience it in advance.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q103-Q108):

NEW QUESTION # 103

your customer has asked you to assign a switch management role for a new user The customer requires the user role to View switch configuration information and have access to the PUT and POST methods for REST API.

Which default AOS-CX user role meets these requirements?

- A. administrators
- B. sysops
- C. auditors
- D. helpdesk

Answer: B

Explanation:

The correct answer is C. sysops.

The sysops user role is a predefined role that allows users to view switch configuration information and have access to the PUT and POST methods for REST API. The sysops user role can also use the PATCH and DELETE methods for REST API, but not for all resources. The sysops user role is suitable for users who need to perform system operations on the switch, such as backup, restore, upgrade, or reboot.

According to the AOS-CX REST API Reference basics¹, one of the predefined user roles is: sysops:

Users with this role can view switch configuration information and have access to the PUT and POST methods for REST API. They can also use the PATCH and DELETE methods for REST API, but not for all resources. Users with this role can perform system operations on the switch, such as backup, restore, upgrade, or reboot.

The other options are incorrect because:

A) administrators: Users with this role have full access to all switch configuration information and all REST API methods. This role is more than what the customer requires.

B) auditors: Users with this role can only view switch configuration information and have access to the GET method for REST API. They cannot use the PUT and POST methods for REST API.

D) helpdesk: Users with this role can view switch configuration information and have access to the GET method for REST API.

They can also use the PATCH method for REST API, but only for a limited set of resources. They cannot use the PUT and POST methods for REST API.

NEW QUESTION # 104

By default, Best Effort is higher priority than which priority traffic type?

- A. All queues
- B. Background
- C. Network Control
- D. Internet Control

Answer: B

Explanation:

This is because Best Effort traffic is all other kinds of non-detrimental traffic that are not sensitive to Quality of Service metrics (jitter, packet loss, latency). A typical example would be peer-to-peer and email applications². Background traffic is a type of traffic that is used for system maintenance or backup purposes and does not affect the performance or availability of the network³.

Therefore, Best Effort traffic has a higher priority than Background traffic in terms of network resources allocation and management.

NEW QUESTION # 105

For the Aruba CX 6400 switch, what does virtual output queuing (VOQ) implement that is different from most typical campus switches?

- A. VSX
- B. large egress packet buffers
- C. large ingress packet buffers
- D. per port ASICs

Answer: C

Explanation:

Explanation

The Aruba CX 6400 switch is a modular switch that supports high-performance and high-density Ethernet switching for campus and data center networks. One of the features that distinguishes the Aruba CX 6400 switch from most typical campus switches is virtual output queuing (VOQ). VOQ is a technique that implements large ingress packet buffers on each port to prevent head-of-line blocking and packet loss due to congestion. VOQ allows each port to have multiple queues for different output ports and prioritize packets based on their destination and QoS class. VOQ enables the Aruba CX 6400 switch to achieve high throughput and low latency for various traffic types and scenarios. References: 2

NEW QUESTION # 106

Which statements regarding Aruba NAE agents are true? (Select two)

- A. A single NAE agent can be used by multiple NAE scripts.
- B. A single NAE script can be used by multiple NAE agents
- C. NAE agents are active at all times
- D. NAE scripts must be reviewed and signed by Aruba before being used
- E. NAE agents will never consume more than 10% of switch processor resources

Answer: B,C

NEW QUESTION # 107

Refer to the exhibit.

With Core-1, what is the default value for config-revision?

- A. 1-0
- B. 0. 0
- C. 0
- **D. 1**

Answer: D

Explanation:
Explanation

The default value for config-revision on Core-1 is 0. Config-revision is a parameter that indicates the configuration version of a VSX pair. It is used to synchronize the configuration between the VSX peers and to detect any configuration mismatch. The config-revision value is set to 0 by default on both VSX peers and is incremented by 1 every time a configuration change is made on either peer. The other options are incorrect because they do not reflect the default value of config-revision. References:
