2026 High-quality User-Experience-Designer – 100% Free Hot Spot Questions | Valid User-Experience-Designer Test Pass4sure

Often candidates fail the User-Experience-Designer exam due to the fact that they do not know the tactics of attempting the Salesforce Certified User Experience Designer (User-Experience-Designer) exam in an ideal way. The decisive part is often effective time management. Some Salesforce User-Experience-Designer Exam Questions demand more attention than others, which disturbs the time allotted to each topic. The best way to counter them is to use an updated User-Experience-Designer Dumps.

Salesforce User Experience Designer certification exam covers a range of topics such as design thinking, user research, prototyping, and usability testing. It also covers the best practices for designing user interfaces and user experiences for applications developed using Salesforce. Salesforce Certified User Experience Designer certification exam is intended for individuals who have a basic understanding of Salesforce and experience in designing user interfaces and experiences.

Salesforce Certified User Experience Designer Sample Questions (Q89-Q94):

NEW QUESTION # 89

Which two consideration should be made when conducting a Consequence Scanning workshop?
Choose 2 answers

- A. Prioritize marketing opportunities when designing features of a product.
- B. Consider design ramifications to prevent misuse and protect communities.
- C. Bring together a cross-function group with varied experiences.
- D. Examine a product for potential inclusivity after it has been built

Answer: B,D

NEW QUESTION # 90

A company provides away for customers to shop for homes and contact real estate agents online. The company's brokers use some of the Salesforce standard functionality to track home buyers.

Which three standard Salesforce objects should be used in this experience?

Choose 3 answers

- A. Lead
- B. Contact
- C. Address
- D. Property
- E. Opportunity

Answer: A,B,E

Explanation:

Explanation

The three standard Salesforce objects that should be used in this experience are:

Lead: A lead is a person who has shown interest in the company's products or services, but has not yet been qualified as a potential customer. Leads can be captured from various sources, such as web forms, referrals, events, or marketing campaigns. Leads can store information such as name, email, phone, company, and status. Leads can be converted into accounts, contacts, and opportunities when they are ready to buy.

Contact: A contact is a person who is associated with an account and has a role in a sales process.

Contacts can store information such as name, email, phone, title, and address. Contacts can be related to multiple accounts, opportunities, cases, activities, and other objects. Contacts can be used to track the communication and interaction history with the customers.

Opportunity: An opportunity is a sales deal that is in progress or has been closed. Opportunities can store information such as name, amount, stage, probability, close date, and owner. Opportunities can be linked to accounts, contacts, products, price books, quotes, contracts, and other objects. Opportunities can be used to forecast revenue, manage sales pipeline, and track sales performance.

NEW QUESTION # 91

Following a human-centered design process approach, Cloud Kicks is preparing a user feedback session for an app that is not performing as anticipated.

In which two ways could confirmation bias be avoided?

Choose 2 answers

- A. Diversity feedback by ensuring it features as many unique perspectives as possible.
- B. Interview users about the intended use of the product to support the questionnaire creation.
- C. Review questions to remove assumptions about issues or problems not supported by quantitative data.
- D. Obtain user feedback to reinforce known assumptions and support design decisions.

Answer: A,B

Explanation:

Explanation

Confirmation bias is the tendency to seek out and prefer information that supports our preexisting beliefs, while ignoring or rejecting information that contradicts them. Confirmation bias can affect the validity and reliability of user feedback, as it can lead to biased questions, selective interpretation, and skewed results. To avoid confirmation bias in user feedback, Cloud Kicks can follow these two strategies:

Interview users about the intended use of the product to support the questionnaire creation. This can help Cloud Kicks to understand the user needs, expectations, and goals, and to design questions that are relevant, clear, and unbiased. By interviewing users, Cloud Kicks can also avoid making assumptions about the user behavior, preferences, and pain points, and instead base their questions on real user data and insights 1.

Diversify feedback by ensuring it features as many unique perspectives as possible. This can help Cloud Kicks to reduce the risk of sampling bias, which occurs when the feedback is collected from a group of users that is not representative of the target population. By diversifying feedback, Cloud Kicks can capture a wider range of user opinions, experiences, and feedback, and avoid overlooking or dismissing important user segments or viewpoints 2.

NEW QUESTION # 92

A UX Design team is doing a review of a new Lightning Web Component (LWC). They are following the Salesforce Lightning Design System (SLDS) block, element, modifier (BEM) naming conventions.

Which class does NOT follow this convention?

- A. .slds-box
- B. .slds--size-l-of-2
- C. .slds-avatar_circle

Answer: B

Explanation:

Explanation

The SLDS BEM naming convention consists of three parts: block, element, and modifier. A block is a standalone component that can be reused across projects, such as a button, a card, or a modal. An element is a part of a block that has no standalone meaning, such as a label, an icon, or a header. A modifier is a flag that changes the appearance or behavior of a block or an element, such as size, color, or state. The modifier is separated from the block or element by two hyphens (-), and can have a value separated by a single hyphen (-), such as .slds-button-brand or .slds-button-neutral. The class .slds-size-l-of-2 does not follow this convention because it has no block or element name before the modifier. It should be something like

.slds-grid-size-l-of-2 or .slds-col-size-l-of-2. References:

NEW QUESTION # 93

A UX Designer has created two different user interface designs for a new marketing landing page expected to have several visitors. The landing page has a contact form on it, and the designer wants to know which design produces the most form completions.

Which testing method should be used?

- A. Diary Studies
- B. A/B testing
- C. Card Sorting
- D. User Acceptance testing

Answer: B

Explanation:

A/B testing is a testing method that compares two versions of a user interface design to measure which one performs better in terms of a specific goal, such as form completions. A/B testing can help the UX Designer to evaluate the effectiveness of different design elements, such as layout, color, typography, copy, etc. A/B testing can also help the UX Designer to optimize the conversion rate of the landing page and increase the number of leads generated.
