

# Latest Managing-Cloud-Security Test Camp & Exam

## Managing-Cloud-Security Vce Format

---

### WGU Course C838 - Managing Cloud Security Exam Q&As (Latest Update 2023)(1000+ Questions answered)

Which phase of the cloud data life cycle allows both read and process functions to be performed?

- A Create
- B Archive
- C Store
- D Share - correct answers A

Which phase of the cloud data security life cycle typically occurs simultaneously with creation?

- A Share
- B Store
- C Use
- D Destroy - correct answers B

Which phase of the cloud data life cycle uses content delivery networks?

- A Destroy
- B Archive
- C Share
- D Create - correct answers C

What's more, part of that CertkingdomPDF Managing-Cloud-Security dumps now are free: [https://drive.google.com/open?id=1MFSJNY\\_HQXffzBVq1ATcGkaff6zSfVzU](https://drive.google.com/open?id=1MFSJNY_HQXffzBVq1ATcGkaff6zSfVzU)

With the WGU Managing-Cloud-Security certification exam you can do your job nicely and quickly. You should keep in mind that the WGU Managing-Cloud-Security certification exam is a valuable credential and will play an important role in your career advancement. With the right WGU Managing-Cloud-Security Exam Preparation, commitment and dedication you can make this challenge easy and quick.

Although it is not an easy thing for somebody to pass the exam, CertkingdomPDF can help aggressive people to achieve their goals. More qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification certifications to prove their ability, can we win over rivals in the social competition. So the Managing-Cloud-Security Certification has also become more and more important for all people. Because a lot of people long to improve themselves and get the decent job. In this circumstance, more and more people will ponder the question how to get the Managing-Cloud-Security certification successfully in a short time.

## 2026 WGU First-grade Managing-Cloud-Security: Latest WGU Managing Cloud Security (JY02) Test Camp

Our company is a professional certificate exam materials provider, and we have occupied in this field for years. Managing-Cloud-Security exam dumps are high-quality, and we have received many good feedbacks from our customers. In addition, we offer you free demo for you to have a try before buying Managing-Cloud-Security Exam Braindumps, and you will have a better understanding of what you are going to buy. We have online and offline chat service stuffs, who are quite familiar with the Managing-Cloud-Security exam dumps, if you have any questions, just contact us.

## WGU Managing Cloud Security (JY02) Sample Questions (Q73-Q78):

### NEW QUESTION # 73

An organization designing a data center wants the ability to quickly create and shut down virtual systems based on demand. Which concept describes this capability?

- A. Resource scheduling
- B. High availability
- C. Maintenance mode
- D. Ephemeral computing

**Answer: D**

Explanation:

The capability to rapidly create and destroy virtual systems as demand fluctuates is known as ephemeral computing. These short-lived resources are provisioned automatically when needed and decommissioned when demand subsides.

Resource scheduling helps allocate resources but does not imply temporary lifespans. High availability ensures continuous service, and maintenance mode is used for administrative tasks.

Ephemeral computing is central to elasticity in cloud environments, reducing costs and improving scalability.

For example, containers or serverless functions may run only while needed and then disappear. This model optimizes utilization, lowers expenses, and supports modern application architectures that demand agility.

### NEW QUESTION # 74

Which key management option typically needs to be on-premises and delivers the keys to the cloud over a dedicated connection?

- A. Virtual appliance
- B. Hybrid
- C. Cloud provider service
- D. Hardware security appliance

**Answer: B**

Explanation:

The Hybrid key management option typically requires key management infrastructure to remain on-premises while securely delivering cryptographic keys to the cloud through a dedicated and protected connection.

Managing Cloud guidance explains that hybrid key management models are designed for organizations that require maximum control over encryption keys while still leveraging cloud-based storage and processing.

In this model, encryption keys are generated, stored, and managed within the organization's own secure environment, reducing the risk of unauthorized access by external entities. Keys are provided to cloud services only when needed and often through secure channels such as private network connections. This approach supports strict compliance, regulatory, and data sovereignty requirements.

Other options do not meet this requirement. A hardware security appliance may be used on-premises but does not inherently define a hybrid cloud delivery model. Virtual appliances are typically cloud-resident, and cloud provider services manage keys entirely within the provider's infrastructure. Therefore, the hybrid option best aligns with on-premises key control combined with secure cloud integration.

### NEW QUESTION # 75

An organization is undergoing an ISO 27001 audit that includes a software as a service (SaaS) solution within scope, and the auditor has requested evidence of controls. What evidence should the organization provide the auditor?

- A. Operating system patch logs
- B. Physical diagram of the data center

- C. Network firewall rules
- **D. Provider compliance attestation**

**Answer: D**

Explanation:

When a SaaS solution is included within the scope of an ISO 27001 audit, the organization should provide the cloud provider's compliance attestation as evidence of controls. Managing Cloud guidance explains that in the SaaS model, the provider manages infrastructure, platform, and application-level controls.

Because customers do not manage operating systems, firewalls, or physical data centers in SaaS, they cannot supply direct technical evidence for those controls. Instead, third-party audit reports and attestations demonstrate that the provider has implemented appropriate security controls.

Firewall rules, OS patch logs, and physical diagrams are not accessible to SaaS customers. Therefore, provider compliance attestation is the correct evidence.

#### **NEW QUESTION # 76**

The designers of a proposed data center are evaluating the requirements to use virtualization for the services it provides. Which type of design consideration is being addressed?

- A. Environmental
- B. Regulatory
- **C. Logical**
- D. Physical

**Answer: C**

Explanation:

Evaluating the use of virtualization addresses a logical design consideration. Managing Cloud documentation explains that logical design focuses on system architecture, virtualization layers, network segmentation, and service delivery models.

Virtualization determines how workloads are abstracted from physical hardware, how resources are shared, and how isolation is enforced between workloads. Decisions related to hypervisors, virtual machines, containers, and orchestration platforms fall under logical architecture rather than physical layout or environmental controls.

Regulatory considerations involve compliance requirements, environmental considerations include power and cooling, and physical considerations address space and hardware placement. Therefore, virtualization is a logical design consideration.

#### **NEW QUESTION # 77**

Which security threat occurs when authorized users increase their level of access in an unauthorized manner?

- A. Role assumption
- B. Segregation of duties
- **C. Escalation of privilege**
- D. Man-in-the-middle

**Answer: C**

Explanation:

Escalation of privilege occurs when an authorized user gains higher access rights than originally granted, without proper authorization. Managing Cloud principles describe this threat as particularly dangerous because it involves legitimate credentials being abused rather than external attackers breaching the system.

In cloud environments, privilege escalation may occur due to misconfigured access controls, vulnerable applications, or excessive permissions. Once elevated access is obtained, a user can modify configurations, access sensitive data, or disrupt services beyond their intended role. This directly violates the principle of least privilege and increases the impact of insider threats.

The other options do not describe this scenario. Man-in-the-middle attacks intercept communications, role assumption is a legitimate access mechanism when properly authorized, and segregation of duties is a control designed to prevent abuse. Therefore, escalation of privilege is the correct answer.

#### **NEW QUESTION # 78**

.....

For candidates who are going to purchasing Managing-Cloud-Security learning materials online, they may pay more attention to money safety. If you choose us, we can provide you with a clean and safe online shopping environment. We apply the international recognition third party for the payment of Managing-Cloud-Security exam baidumps, and therefore your money and account safety can be guaranteed. Moreover, Managing-Cloud-Security Exam Dumps are high-quality, and you can pass the exam successfully. We offer you free update for 365 days afterpurchasing, and the update version for Managing-Cloud-Security learning materials will be sent to your email automatically.
