- D. Scrum

**Answer: B**

### NEW QUESTION # 17

Which two statements about XML schema definition (XSD) files are correct? (Choose two.)

- A. An XSD file is not an XML document.
- **B. XSD files ensure that everyone working with the XML document uses a common set of tags.**
- C. Every XML document must have an XSD file defined for it.
- **D. XSD files define all the elements in an XML document and the document XML hierarchy.**

**Answer: B,D**

Explanation:

XML Schema Definition (XSD) files are used to define the structure and data types of an XML document. They ensure that the XML document adheres to a specific structure by defining the allowed elements, attributes, and their data types, thereby enforcing a consistent format.

Option A is correct because XSD files define the elements, attributes, and structure (hierarchy) of an XML document.

Option D is correct because XSD files provide a standardized format, ensuring that all parties working with the XML document use the same set of tags and structure.

Option B (Every XML document must have an XSD file defined for it) is incorrect; not every XML document requires an XSD file, although it's beneficial for validation.

Option C (An XSD file is not an XML document) is incorrect because XSD files themselves are written in XML.

Supporting Reference:

W3C XML Schema Definition (XSD) Documentation: Explains the purpose and structure of XSD files, including their role in defining XML document schemas.
