Pass Development-Lifecycle-and-Deployment-Architect Exam - Reliable Development-Lifecycle-and-Deployment-Architect Mock Test

To stand in the race and get hold of what you deserve in your career, you must check with all the Salesforce Development-Lifecycle-and-Deployment-Architect Exam Questions that can help you study for the Salesforce Development-Lifecycle-and-Deployment-Architect certification exam and clear it with a brilliant score. You can easily get these Salesforce Development-Lifecycle-and-Deployment-Architect Exam Dumps from Salesforce that are helping candidates achieve their goals.

To pass the Salesforce Development-Lifecycle-and-Deployment-Architect Certification Exam, candidates must demonstrate a deep understanding of the Salesforce platform, as well as the ability to design and implement effective development and deployment strategies. Candidates must also possess strong problem-solving skills, the ability to work collaboratively with other team members, and the ability to effectively communicate complex technical concepts.

Salesforce Development-Lifecycle-and-Deployment-Architect certification exam is one of the most in-demand certifications in the Salesforce ecosystem. Salesforce Certified Development Lifecycle and Deployment Architect certification exam is suitable for professionals who want to advance their career in Salesforce development and deployment. With this certification, candidates can demonstrate their expertise in designing, developing, and deploying Salesforce applications and solutions according to industry standards and best practices.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q172-Q177):

NEW QUESTION # 172
By to What three tools should an architect recommend to support application lifecycle methodology Choose 3 answers

- A. Version control repository
- B. Middleware
- C. Continuous integration tool
- D. Issue tracking Ttool
- E. Database management systems

Answer: A,C

NEW QUESTION # 173
Universal Containers (UC) has two subsidiaries which operate independently. UC has made the decision to operate two of separate Salesforce orgs, one for each subsidiary. However, certain functions and processes between the two orgs must be standardized. Which two approaches should UC take to develop customizations once, and make them available in both orgs? Choose 2 answers

- A. Create a managed package in a sandbox and deploy it to both production orgs
- B. Set up Salesforce-to-Salesforce to deploy the functionality from one org to the other
- C. Develop the functionality in a sandbox and deploy it to both production orgs
- D. Create a package in a Developer Edition org and deploy it to both production orgs

Answer: D

NEW QUESTION # 174
Universal Containers is a global organization that maintains regional production instances of Salesforce. One region has created a new application to track shipping containers.
The CIO has requested that this new application be used globally by all the Salesforce instances and further maintained and modified regionally by local administrators.
Which two deployment tools will support the request?
Choose 2 answers

- A. ANT Migration Tool
- B. Developer Console
- C. Change Sets B
- D. VS Code with Salesforce Extension

Answer: A,D

Explanation:
Explanation
The two deployment tools that will support the request are the ANT Migration Tool and VS Code with Salesforce Extension. These tools allow the developers to deploy metadata components from one Salesforce org to another, and also to maintain and modify the code locally in their own machines. Change Sets and Developer Console are not suitable for this scenario, because they do not support deploying to multiple orgs or working offline.

NEW QUESTION # 175
Universal Containers (UC) environment management architect is using the package development model for deployment to different orgs.
Which metadata changes does the architect need to track manually?

- A. Only the changes made via the Setup UI.
- B. No manual tracking required. All changes are automatically tracked.
- C. Changes to components not yet supported by source tracking.
- D. All metadata changes for the release.

Answer: C

Explanation:
The package development model relies on source tracking to automatically track the metadata changes in the package project. However, not all metadata components are supported by source tracking, and some changes may need to be tracked manually. For example, changes to profiles, permission sets, custom metadata types, and custom settings are not supported by source tracking. You can find the list of unsupported components here1. No manual tracking is required for the changes that are supported by source tracking, nor for the changes made via the Setup UI, as they are automatically captured by the package development model.

NEW QUESTION # 176
By to What three tools should an architect recommend to support application lifecycle methodology Choose 3 answers

- A. Version control repository
- B. Middleware
- C. Continuous integration tool
- D. Database management systems
- E. Issue tracking Tool

Answer: A,C,E

Explanation:
Explanation
To support application lifecycle methodology, you need tools that can help you manage the source code, automate the deployment process, and track the issues and bugs. A version control repository is a tool that allows you to store, track, and collaborate on the source code of your application. A continuous integration tool is a tool that allows you to automate the deployment of your code to different environments, as well as run tests and validations. An issue tracking tool is a tool that allows you to record, monitor, and resolve the issues and bugs that arise during the development and testing phases. A database management system is a tool that allows you to store, manipulate, and query data, but it is not directly related to application lifecycle methodology. A middleware is a software layer that facilitates communication and data exchange between different applications, but it is not directly related to application lifecycle methodology either.

NEW QUESTION # 177
.....

If you can pass the exam just one tie, then you will save both your money and your time. Development-Lifecycle-and-Deployment-Architect exam braindumps can help you pass the exam just one time. Development-Lifecycle-and-Deployment-Architect exam dumps are edited by professional experts, therefore the quality can be guaranteed. Development-Lifecycle-and-Deployment-Architect exam materials cover most of knowledge points for the exam, and you can mater major knowledge points. In addition, we are pass guarantee and money back guarantee if you fail to pass the exam. You can know the latest information for Development-Lifecycle-and-Deployment-Architect Exam Materials through the update version, since we offer you free update for one year, and the update version for Development-Lifecycle-and-Deployment-Architect exam dumps will be sent your email address automatically.
