Salesforce Certified Experience Cloud Consultant Sample Questions (Q160-Q165):

NEW QUESTION # 160

Insightopia's Experience Cloud site went live on the first day of the last month. The launch has been very successful, and the number of community members has reached the first milestone of 10,000. The Experience Cloud site manager wants to implement gamification methods to increase engagement and adoption.

What should be the recommended approach for implementing gamification?

- A. Organize a community event to get ideas for implementing gamification.
- **B. Use the Missions feature to assign badges to members automatically.**
- C. Use the Einstein game mechanics feature for implementing gamification.
- D. Build flows to implement gamification for community members.

Answer: B

Explanation:

A recommended approach for implementing gamification is to use the Missions feature to assign badges to members automatically. Missions are a feature that allows you to create challenges and rewards for your site members based on their actions and behaviors. You can use Missions to define criteria and actions that trigger badges, points, or ranks for your members. For example, you can create a Mission that awards a badge to a member who posts a question, comments on an answer, or likes a post.

NEW QUESTION # 161

By defining roles, permission sets, or profiles, Knowledge article visibility can be controlled by using which functionality?

- A. Org-Wide Defaults
- B. Content Management
- **C. Data Category Visibility**
- D. Automatic Topic Assignment

Answer: C

Explanation:

Data Category Visibility allows you to control which Knowledge articles are visible to which users based on data categories and user roles, permission sets, or profiles. You can assign data category visibility at different levels, such as the org-wide default, the role hierarchy, or the permission set.

NEW QUESTION # 162

Cloud Kicks (CK) has built a site using Salesforce Experience Builder. The CTO of CK wants to give customers the ability to log in to the site using their Google credentials. CK also wants to access customers' basic Google profile data when they log in so the company can serve content that matches customers' interests.

How should the Experience Cloud consultant implement this?

- A. Create a custom self-registration page and a custom login page by using Visualforce and Apex controllers.
- B. Create a custom login page using Lightning components and use the Google REST API to access customers' basic profile data.
- C. Set up a login flow for communities that accepts the customers' Google credentials and matches with the credentials stored on the user records in Salesforce.
- **D. Create an Authentication Provider by choosing Google as the provider type and add relevant parameters to access the customers' basic profile data.**

Answer: D

Explanation:

This option allows CK to use Google as an external identity provider and enable customers to log in to the site using their Google

credentials. CK can also access customers' basic profile data, such as name, email, and picture, by specifying the scopes and attributes in the authentication provider settings. CK can also use the authentication provider to configure single sign-on (SSO) and just-in-time (JIT) provisioning for the site.

NEW QUESTION # 163

Cloud Kicks has packaged its Customer Support Community. The community includes navigation menu items that link to standard and custom objects.

Which two points should the Experience Cloud consultant consider when reviewing the package? Choose 2 answers

- A. Custom list views for custom objects are not included as dependencies.
- B. Custom list views for standard objects are not included as dependencies.
- C. Custom list views for standard objects are included as dependencies.
- D. Custom list views for custom objects are included as dependencies.

Answer: A,B

Explanation:

When you package your Experience Cloud site, some components and settings are included as dependencies, while others are not. For example:

* Custom list views for custom objects are not included as dependencies. You need to manually add them to your package or recreate them in the target org.

* Custom list views for standard objects are not included as dependencies. You need to manually add them to your package or recreate them in the target org.

NEW QUESTION # 164

Universal Containers (UC) is implementing a community for its retailers.

How can UC give retail store managers access to the records owned by their peers and subordinates?

- A. Set OWD to public, and manage access via Apex Sharing.
- B. Give retail managers Super User access.
- C. Email retail managers best practices on how to manually share data.
- D. Put retail managers in a manager role.

Answer: B

Explanation:

This option allows UC to give retail store managers access to the records owned by their peers and subordinates. Super User access is a feature that grants community users access to records that are owned by users who have the same role or a role below them in the role hierarchy. Super User access can be enabled for partner users or customer users with Customer Community Plus or Partner Community licenses.
