Latest Snowflake COF-C03 Exam Questions - Valid Braindumps COF-C03 Sheet

The free demos do honor to the perfection of our latest COF-C03 exam torrent, and also a performance of our considerate after

sales services. Those demos serve as epitomes of real COF-C03 quiz guides for your reference. In our demos, some examples or question points were enumerated as some representatives of our COF-C03 Test Prep. How convenient and awesome of it! By the free trial services you can get close realization with our COF-C03 quiz guides, and know how to choose the perfect versions before your purchase.

Snowflake SnowPro® Core Certification (COF-C03) Sample Questions (Q600-Q605):

NEW QUESTION # 600

What can be used to view warehouse usage over time? (Select Two).

- A. The load HISTORY view
- B. The show warehouses command
- C. The Query history view
- D. The billing and usage tab in the Snowflake web UI
- E. The WAREHOUSE_METERING__HISTORY View

Answer: C,E

Explanation:

To view warehouse usage over time, the Query history view and the WAREHOUSE_METERING__HISTORY View can be utilized. The Query history view allows users to monitor the performance of their queries and the load on their warehouses over a specified period¹. The WAREHOUSE_METERING__HISTORY View provides detailed information about the workload on a warehouse within a specified date range, including average running and queued loads². NEW QUESTION # 601

What does Snowflake attempt to do if any of the compute resources for a virtual warehouse fail to provision during start-up?

- A. Restart failed resources.
- B. Repair the failed resources.
- C. Provision the failed resources
- D. Queue the failed resources

Answer: A

Explanation:

If any compute resources for a virtual warehouse fail to provision during startup, Snowflake will attempt to restart those failed resources. The system is designed to automatically handle transient issues that might occur during the provisioning of compute resources. By restarting the failed resources, Snowflake aims to ensure that the virtual warehouse has the necessary compute capacity to handle the user's workloads without manual intervention. NEW QUESTION # 602

Which table function is used to perform additional processing on the results of a previously-run query?

- A. RESULT_SCAN
- B. QUERY_HISTORY_BY_SESSION
- C. DESCRIBE_RESULTS
- D. QUERY_HISTORY

Answer: A

Explanation:

The RESULT_SCAN table function is used in Snowflake to perform additional processing on the results of a previously-run query. It allows users to reference the result set of a previous query by its query ID, enabling further analysis or transformations without re-executing the original query.

Snowflake Documentation: RESULT_SCAN

NEW QUESTION # 603

Snowflake's hierarchical key mode includes which keys? (Select TWO).

- A. Account master keys
- B. Database master keys
- C. Schema master keys
- D. Secure view keys
- E. File keys

Answer: A,E

Explanation:

Snowflake's hierarchical key model includes several levels of keys, where Account master keys and File keys are part of this hierarchy. Account master keys are used to encrypt all the data within an account, while File keys are used to encrypt individual files within the database.

NEW QUESTION # 604

What is the PRIMARY factor that determines the cost of using a virtual warehouse in Snowflake?

- A. The length of time the compute resources in each cluster run
- B. The number of tables or databases queried
- C. The amount of data stored in the warehouse
- D. The type of SQL statements executed

Answer: A

Explanation:

The primary factor that determines the cost of using a virtual warehouse in Snowflake is D. The length of time the compute resources in each cluster run. Snowflake's pricing model for compute usage is based on the concept of Snowflake credits, which are consumed based on the time virtual warehouses are running and the size of the warehouses. The more compute resources are utilized and the longer they run, the more credits are consumed, which directly impacts the cost.
