Get Authoritative Certification AP-202 Questions and Pass Exam in First Attempt

If you are a person who desire to move ahead in the career with informed choice, then the Salesforce training material is quite beneficial for you. The AP-202 pdf vce is designed to boost your personal ability in your industry. It just needs to spend 20-30 hours on the AP-202 Preparation, which can allow you to face with AP-202 actual test with confidence. You will always get the latest and updated information about AP-202 training pdf for study due to our one year free update policy after your purchase.

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q181-Q186):

NEW QUESTION # 181

Which three actions are applicable when modifying the number of steps required in the Salesforce Commerce Checkout flow? (3 answers)

- A. Set the value of the configuration setting defined as CO.overrideFlow to TRU
- B. Add a page include to the checkout page.
- C. Perform a template override on the Checkout page.
- D. Set the value of the configuration setting defined as CO.useDef to TRUE
- E. Build and activate a new configuration cache setting via CC admin.

Answer: A,C,E

Explanation:

Three actions that are applicable when modifying the number of steps required in the Salesforce Commerce Checkout flow are:

- Perform a template override on the Checkout page. This action will allow you to change the structure and content of the Checkout page, such as adding or removing sections, widgets, or fields. For example, you can override the checkout.handlebars template and modify it according to your requirements.
- Set the value of the configuration setting defined as CO.overrideFlow to TRUE. This setting will enable you to use your own custom checkout flow instead of the default one. You need to set this value to true before you can modify the checkout flow.
- Set the value of the configuration setting defined as CO.useDef to TRUE. This setting will enable you to use a single-page checkout flow instead of a multi-step checkout flow. You need to set this value to true if you want to reduce the number of steps in the checkout flow to one. Salesforce B2B Commerce and D2C Commerce Developer Guide, Checkout Flow

NEW QUESTION # 182

What is one requirement to keep in mind when including additional JavaScript 1h files in a Lightning Web Component?

- A. Only one of the files can be used with an import statement
- B. Only five of the files can be used with an import statement
- C. The files must be ES6 modules and must have names that are unique within the component's folder.
- D. All the files must be imported to a singleton.js file and the singleton.js file can be used with an import statement

Answer: C

Explanation:

When including additional JavaScript files in a Lightning Web Component, it is required that these files are ECMAScript 6 (ES6) modules and have unique names within the component's folder. This ensures proper module resolution and avoids namespace conflicts. Salesforce LWC documentation provides guidelines on organizing component resources, including JavaScript modules, to ensure they are correctly recognized and utilized within the LWC framework.

NEW QUESTION # 183

Which practice is allowed when it comes to naming a Lightning web component's folder and associated files?

- A. Using a single hyphen (dash)
- B. Using a single underscore
- C. Including whitespace
- D. Using consecutive underscores

Answer: B

Explanation:

To name a Lightning web component's folder and associated files, the developer should follow these naming rules:

Must begin with a lowercase letter

Must contain only alphanumeric or underscore characters

Must be unique in the namespace

Can't include whitespace

Can't end with an underscore

Can't contain two consecutive underscores

Can't contain a hyphen (dash)

The only exception to the last rule is when separating the namespace from the component name in markup. For example, if the component is in the example namespace and has the name myComponent, the folder name should be myComponent, but the markup tag should be <example-my-component>. The hyphen character (-) is required by the HTML standard for custom element names. The other options are either invalid or not recommended. For example, including whitespace or using consecutive underscores will cause errors, and using a single underscore will look odd and may confuse developers consuming the component. B2B Commerce and D2C Commerce Developer Guide, Lightning Web Components Developer Guide

NEW QUESTION # 184

What are two common and maintainable ways the content layout of a Lightning Web Component can be implemented?

- A. Using inline styles
- B. Spreading layout styles across several separate components

- C. Applying SLDS classes to internal elements
- D. Styling the :host pseudo-element (or other elements) via the CSS file

Answer: C,D

Explanation:

For maintainable and scalable Lightning Web Component development, it's recommended to style components by targeting the :host pseudo-element in the component's CSS file and by applying Salesforce Lightning Design System (SLDS) classes to internal elements. These practices ensure consistent styling that aligns with Salesforce's design standards and provides a clear separation of concerns between component structure and styling.

NEW QUESTION # 185

How is a price group dynamically set?

- A. By extending the cc_hk_pricing hook
- B. By using contract pricing
- C. By extending the ccApiPriceList API
- D. By overriding the ccLogicProductPrice class

Answer: A

Explanation:

A price group can be dynamically set by extending the cc_hk_pricing hook. This hook allows modifying the price group based on various factors, such as the user, cart, product, or storefront. For example, the hook can apply a different price group for a specific product category or for a specific user segment.
