Through years of marketing, our AZ-400 study materials have won the support of many customers. The most obvious data is that our products are gradually increasing each year, and it is a great effort to achieve such a huge success thanks to our product development. First of all, we have done a very good job in studying the updating of materials. In addition, the quality of our AZ-400 Study Materials is strictly controlled by teachers. So, believe that we are the right choice, if you have any questions about our study materials, you can consult us.

TestkingPass is a website to improve the pass rate of Microsoft certification AZ-400 exam. Senior IT experts in the TestkingPass constantly developed a variety of successful programs of passing Microsoft certification AZ-400 exam, so the results of their research can 100% guarantee you Microsoft certification AZ-400 exam for one time. TestkingPass's training tools are very effective and many people who have passed a number of IT certification exams used the practice questions and answers provided by TestkingPass. Some of them who have passed the Microsoft Certification AZ-400 Exam also use TestkingPass's products. Selecting TestkingPass means choosing a success

## Microsoft AZ-400 Exam Guide Materials | Reliable AZ-400 Test Practice

Choosing to participate in Microsoft certification AZ-400 exam is a wise choice, because if you have a Microsoft AZ-400 authentication certificate, your salary and job position will be improved quickly and then your living standard will provide at the same time. But passing Microsoft certification AZ-400 exam is not very easy, it need to spend a lot of time and energy to master relevant IT professional knowledge. TestkingPass is a professional IT training website to make the training scheme for Microsoft Certification AZ-400 Exam. At first you can free download part of exercises questions and answers about Microsoft certification AZ-400 exam on [www.TestkingPass.com](http://www.TestkingPass.com) as a try, so that you can check the reliability of our product. Generally, if you have tried TestkingPass's products, you'll very confident of our products.

Microsoft AZ-400 Certification Exam is designed for professionals who wish to demonstrate their expertise in designing and implementing DevOps solutions using Microsoft technologies. DevOps has become an essential part of software development and delivery as it enables organizations to deliver high-quality software products faster and more efficiently. Designing and Implementing Microsoft DevOps Solutions certification exam validates the skills and knowledge required to successfully implement DevOps practices in a Microsoft environment.

## Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q577-Q582):

### NEW QUESTION # 577

You need to create a virtual machine template in an Azure DevTest Labs environment named az400-9940427- dtl1. The template must be based on Windows Server 2016 Datacenter. Virtual machines created from the template must include the selenium tool and the Google Chrome browser.

To complete this task, sign in to the Microsoft Azure portal.

**Answer:**

Explanation:

See solution below.

Explanation:

1. Open Microsoft Azure Portal
2. Select All Services, and then select DevTest Labs in the DEVOPS section.
3. From the list of labs, select the az400-9940427-dtll lab
4. On the home page for your lab, select + Add on the toolbar.
5. Select the Windows Server 2016 Datacenter base image for the VM.
6. Select automation options at the bottom of the page above the Submit button.
7. You see the Azure Resource Manager template for creating the virtual machine.
8. The JSON segment in the resources section has the definition for the image type you selected earlier.

**NEW QUESTION # 578**

You are building an ASP.NET Core application.

You plan to create an application utilization baseline by capturing telemetry data.

You need to add code to the application to capture the telemetry data. The solution must minimize the costs of storing the telemetry data.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point

- A. From the code of the application, add Azure Application Insights telemetry.
- B. From the code of the application, disable adaptive sampling.
- C. Add the `<MaxTelemetryItemsPerSecond>5</MaxTelemetryItemsPerSecond>` parameter to the `ApplicationInsights.config` file.
- D. Add the `<InitialSamplingPercentage>99</InitialSamplingPercentage>` parameter to the `ApplicationInsights.config` file.
- E. From the code of the application, enable adaptive sampling.

**Answer: C,E**

Explanation:

Sampling is a feature in Azure Application Insights. It is the recommended way to reduce telemetry traffic, data costs, and storage costs, while preserving a statistically correct analysis of application data.

The Application Insights SDK for ASP.NET Core supports both fixed-rate and adaptive sampling. Adaptive sampling is enabled by default.

D: For adaptive sampling: The volume is adjusted automatically to keep within a specified maximum rate of traffic, and is controlled via the setting `MaxTelemetryItemsPerSecond`. If the application produces a low amount of telemetry, such as when debugging or due to low usage, items won't be dropped by the sampling processor as long as volume is below `MaxTelemetryItemsPerSecond`.

Note: In `ApplicationInsights.config`, you can adjust several parameters in the `AdaptiveSamplingTelemetryProcessor` node. The figures shown are the default values:

```
<MaxTelemetryItemsPerSecond>5</MaxTelemetryItemsPerSecond>
```

Reference:

<https://docs.microsoft.com/en-us/azure/azure-monitor/app/sampling>

**NEW QUESTION # 579**

Your company plans to deploy an application to the following endpoints:

\* Ten virtual machines hosted in Azure

\* Ten virtual machines hosted in an on-premises data center environment All the virtual machines have the Azure Pipelines agent.

You need to implement a release strategy for deploying the application to the endpoints.

What should you recommend using to deploy the application to the endpoints? To answer, drag the appropriate components to the correct endpoints. Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

□ Explanation

□ Box 1: A deployment group

When authoring an Azure Pipelines or TFS Release pipeline, you can specify the deployment targets for a job using a deployment group.

If the target machines are Azure VMs, you can quickly and easily prepare them by installing the Azure Pipelines Agent Azure VM extension on each of the VMs, or by using the Azure Resource Group Deployment task in your release pipeline to create a deployment group dynamically.

□ Box 2: A deployment group

References: <https://docs.microsoft.com/en-us/azure/devops/pipelines/release/deployment-groups>

### NEW QUESTION # 580

You are implementing an Azure DevOps strategy for mobile devices using App Center.

You plan to use distribution groups to control access to releases.

You need to create the distribution groups shown in the following table.

□ Which type of distribution group should you use for each group? To answer, drag the appropriate group types to the correct locations. Each group type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

□

**Answer:**

Explanation:

□ Reference:

<https://docs.microsoft.com/en-us/appcenter/distribution/groups>

### NEW QUESTION # 581

Hotspot Question

You are using Agile process methodologies in Azure DevOps.

You need to deploy a dashboard that will provide progress reports for the following work items:

- How long it took to close a work item after it was created.
- How long it took to close a work item after the work was started.

Which type of widget should you use for each work item? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

**Answer:**

Explanation:

□ Explanation:

□ Box 1: Lead time

□ Box 2: Cycle time

<https://learn.microsoft.com/en-us/azure/devops/report/dashboards/cycle-time-and-lead-time?view=azure-devops> Both lead time and cycle time widgets are useful to teams. They both indicate how long it takes for work to flow through their development pipeline. Lead time measures the total time elapsed from the creation of work items to their completion. Cycle time measures the time it takes for your team to complete work items once they begin actively working on them.

### NEW QUESTION # 582

.....

As a reliable company providing professional IT certificate exam materials, we not only provide quality guaranteed products for AZ-400 exam software, but also offer high quality pre-sale and after-sale service. Our online service will give you 24/7 online support. If you have any question about AZ-400 exam software or other exam materials, or any problem about how to purchase our products, you can contact our online customer service directly. Besides, during one year after you purchased our AZ-400 Exam software, any update of AZ-400 exam software will be sent to your mailbox the first time.
