As is known to us, the quality is an essential standard for a lot of people consuming movements, and the high quality of the 3V0-32.23 study materials is always reflected in the efficiency. We are glad to tell you that the 3V0-32.23 study materials from our company have a high quality and efficiency. If you decide to choose our study materials as you first study tool, it will be very possible for you to pass the 3V0-32.23 Exam successfully, and then you will get the related certification in a short time.

VMware 3V0-32.23 certification exam is a challenging and comprehensive exam that validates an individual's advanced skills and knowledge in designing and implementing cloud management and automation solutions using VMware technologies. Passing 3V0-32.23 exam demonstrates an individual's expertise and proficiency in cloud management and automation and can help advance their career in the IT industry.

Passing the VMware 3V0-32.23 certification exam is a great way to demonstrate your expertise and proficiency in cloud management and automation using VMware technologies. It can also help you advance your career by opening up new job opportunities and increasing your earning potential. Whether you are new to cloud management and automation or have years of experience, the VMware 3V0-32.23 Certification Exam is a valuable investment in your professional development.

3V0-32.23 Reliable Test Preparation, 3V0-32.23 Reliable Exam Simulator

Our experts who compiled the 3V0-32.23 practice materials are assiduously over so many years in this filed. They add the new questions into the 3V0-32.23 study guide once the updates come in the market, so they recompose the contents according to the syllabus and the trend being relentless in recent years. With so accurate information of our 3V0-32.23 learning questions, we can confirm your success by your first attempt.

VMware 3V0-32.23 Certification Exam is intended for IT professionals who work with VMware cloud solutions on a daily basis. This includes cloud architects, cloud engineers, and cloud administrators. Cloud Management and Automation Advanced Design certification is also recommended for IT consultants and solution architects who work with enterprise customers to design and deploy cloud solutions.

VMware Cloud Management and Automation Advanced Design Sample Questions (Q30-Q35):

NEW QUESTION # 30

What does "Manageability" refer to in the context of system architecture?

- A. Designing for optimal performance and response times.
- **B. Monitoring and maintaining the system with ease.**
- C. Ensuring data is protected from unauthorized access.
- D. Creating redundant components to mitigate failures.

Answer: B

NEW QUESTION # 31

A company has recently implemented a DevOps strategy amongst the development and operations teams. In the second phase of the project, it needs to apply the same best practices of version control, unit testing, and continuous delivery to its vSphere infrastructure.

Considering the scenario, which two statements are true regarding the solution? (Choose two.)

- A. Infrastructure content is usually binary, and this makes it difficult to use a source control system to handle updates and merges. A different tool must be used to manage these requirements.
- B. Once the movement of such content between environments is automated, consistent results are guaranteed for the deployment of infrastructure components.
- **C. Multiple steps of imports and exports of infrastructure contents are required for a single change to propagate through the release pipeline from development to production.**
- **D. Content changes for the infrastructure generally flow from development to multiple test and production environments and are often developed separately by different team members and then merged into a shared environment.**

Answer: C,D

NEW QUESTION # 32

As a Service Broker administrator, you have been asked to meet these requirements:

- All released cloud templates must be imported to Service Broker.
- Newly released cloud templates must be automatically synchronized with Service Broker.
- All cloud templates must be automatically published to the service catalog.

Which two options must be configured to meet the requirements? (Choose two.)

- **A. Configure content sharing using Content Sources option**
- **B. Create content source using VMware Cloud Templates option**
- C. Create content source using VMware Cloud Templates option but do not configure content sharing
- D. Configure content sharing using All Content option
- E. Create content source using CloudFormation Template option

Answer: A,B

NEW QUESTION # 33

An architect is designing the deployment of VMware Aria Operations for Logs for a customer. The following information is provided:

Three on-premises DNS servers: dns01.rainpole.local, dns02.rainpole.local and dns03.rainpole.local.

Configure VMware Aria Operations for Logs to support on-prem redundancy in consuming DNS services.

What design decision would the architect choose to achieve the requirement?

- A. Configure VMware Aria Operations for Logs instance to use a public DNS server and dns01.rainpole.local.
- B. Configure VMware Aria Operations for Logs instance to use dns02.rainpole.local only.
- **C. Configure VMware Aria Operations for Logs instance to use dns01.rainpole.local, dns02.rainpole.local and dns03.rainpole.local.**
- D. Configure VMware Aria Operations for Logs instance to use dns01.rainpole.local and dns03.rainpole.local only.

Answer: C

Explanation:

Configuring all three on-premises DNS servers provides redundancy, ensuring that DNS services remain available even if one or two servers fail, which meets the on-premises redundancy requirement.

NEW QUESTION # 34

An architect has been tasked with designing a solution for development team deployments that are connected to the corporate network.

The network security team would like to ensure that the deployments NOT have access to or from corporate network resources without explicit review and authorization. All deployments should be able to communicate with one another.

Which two vRealize Automation blueprint designs satisfy these requirements? (Choose two.)

- A. - On-demand routed network
 - Existing security tags assigned to each machine that are auto-assigned to appropriate security groups in NSX
- B. - On-demand NAT network
 - Existing security group assigned to each machine that is tied to appropriate security policies in NSX
- C. - On-demand NAT network.
 - App Isolation selected from within the blueprint properties
 - Existing security group assigned to each machine that is tied to appropriate security policies in NSX
- D. - On-demand routed network
 - Software components configuring firewall rules on each machine
 - Property definition drop-downs allowing machine firewall configuration at request time

Answer: A,B

NEW QUESTION # 35
