## Marvelous Latest GH-100 Test Format to Obtain Microsoft Certification

The GH-100 dumps of PassReview include valid GH-100 questions PDF and customizable GitHub Administration (GH-100) practice tests. Our 24/7 customer support provides assistance to help GH-100 Dumps users solve their technical hitches during their test preparation. The GH-100 exam questions of PassReview come with up to 365 days of free updates and a free demo.

## Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI</li><li>CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Manage access and permissions based on membership: This section of the exam measures skills of DevOps Engineers and reviews how to manage organizations, teams, and repository permissions. It includes default permission settings, team synchronization through AD, scripting across multiple organizations, and aligning enterprise policies with trust requirements. It also contrasts roles such as organization members, owners, collaborators, and billing managers.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.</li> </ul>

## Microsoft GitHub Administration Sample Questions (Q36-Q41):

### NEW QUESTION # 36

Why would someone choose to configure a security policy?

- A. To provide information on an open source repository for open source collaborators and researchers that may need to report and disclose sensitive security findings to maintainers securely.**
- B. To define which open source packages are permitted for use as part of that repository.
- C. To prevent anyone from pushing to the repository without approval.
- D. To communicate corporate security and compliance policies for end users on a private repository.

**Answer: A**

Explanation:

A security policy (the SECURITY.md file) lets maintainers of an open source repository provide clear, private instructions for collaborators and external researchers on how to report and disclose security vulnerabilities responsibly.

### NEW QUESTION # 37

How does metered billing work in GitHub Enterprise Cloud with Enterprise Managed Users (EMU)?

- A. Billing is based on the number of users created in Azure AD
- B. Billing is based on total users in the enterprise that are not dormant
- C. Billing is based on owners and members of GitHub organizations
- D. Billing is based on number of total users in the enterprise**

**Answer: D**

Explanation:

Billing for GitHub Enterprise Cloud under metered (usage-based) billing is calculated by the total number of Enterprise Managed Users (and other license-consuming accounts) in your enterprise - each EMU consumes a seat and contributes to the monthly bill.

### NEW QUESTION # 38

A GitHub Enterprise administrator is planning to implement SAML SSO across their company. Which of the following correctly distinguishes enterprise-wide SAML SSO from organization-level SAML SSO?

- A. Enterprise-wide SAML SSO immediately removes users who fail to authenticate via the IdP.
- **B. Enterprise-wide SAML SSO ensures users authenticate through the same IdP across all organizations.**
- C. Enterprise-wide SAML SSO requires less initial administrative overhead than organization-level implementation.
- D. Enterprise-wide SAML SSO allows different organizations to use different authentication methods.

**Answer: B**

Explanation:

Enterprise-wide SAML SSO enforces a single IdP across all member organizations-its configuration overrides any per-organization SAML settings, so everyone must authenticate through the same provider.

**NEW QUESTION # 39**

What is the effect of enforcing a policy that restricts GitHub Actions to only those created by the enterprise?

- **A. Only actions created within the enterprise are allowed**
- B. Marketplace actions are allowed only with SSO enabled
- C. All public actions are allowed
- D. Actions can only be triggered by organization members

**Answer: A**

Explanation:

When you enforce the "Allow enterprise actions and reusable workflows" policy, GitHub will block all workflows from using actions or reusable workflows that aren't defined in a repository within your enterprise - so only actions created inside your enterprise are allowed.

**NEW QUESTION # 40**

When a token is used to perform actions across different GitHub resources, how is this reflected in audit logs?

- **A. Each API action made with the token generates a separate audit log entry**
- B. The audit log stores only the token name and not its actions
- C. Only the first repository accessed is recorded
- D. GitHub creates a ZIP archive of all token activity

**Answer: A**

Explanation:

Each API call authenticated with a token generates its own audit-log event, so you'll see a distinct entry for every action performed across different resources, each annotated with the token's hashed ID, actor, and source IP.

**NEW QUESTION # 41**

.....

It is certain that the pass rate among our customers is the most essential criteria to check out whether our GH-100 training materials are effective or not. The good news is that according to statistics, under the help of our GH-100 training materials, the pass rate among our customers has reached as high as 98% to 100%. Our training materials have been honored as the panacea for the candidates for the exam since all of the contents in the GH-100 Guide materials are the essences of the exam. Consequently, with the help of our study materials, you can be confident that you will pass the exam and get the related certification easily. So what are you waiting for? Just take immediate actions!
