

적중율 좋은 GH-100퍼펙트덤프공부인증덤프

그 외, Iteamdmp GH-100 시험 문제집 일부가 지금은 무료입니다: <https://drive.google.com/open?id=1holk1h7AVTlhqv9iUqFsbv1UuSwRN31U>

Itexamdump를 검색을 통해 클릭하게된 지금 이 순간 IT인증자격증취득Microsoft GH-100시험은 더는 힘든 일이 아닙니다. 다른 분들이Microsoft GH-100시험준비로 수없는 고민을 할때 고객님의 저희 Microsoft GH-100덤프로 제일 빠른 시일내에 시험을 패스하여 자격증을 손에 넣을수 있습니다.

Microsoft GH-100 시험요강:

주제	소개
주제 1	Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts.
주제 2	Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.

주제 3	• Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.
주제 4	• Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI • CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.
주제 5	• Manage GitHub Packages: This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI • CD pipelines.
주제 6	• Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.

GH-100퍼펙트 덤프샘플 다운로드, GH-100높은 통과율 인기 덤프자료

Itexamdump에서 제공하는 제품들은 품질이 아주 좋으며 또 업뎃속도도 아주 빠릅니다 만약 우리가제공하는 Microsoft GH-100인증시험관련 덤프를 구매하신다면Microsoft GH-100시험은 손쉽게 성공적으로 패스하실 수 있습니다.

최신 GitHub Administrator GH-100 무료샘플문제 (Q28-Q33):

질문 # 28

What additional capability does secret scanning offer for private repositories on GitHub Enterprise Cloud?

- A. Disables any code that contains a secret.
- B. Allows custom pattern definitions for internal secret formats.
- C. Revokes GitHub access tokens automatically.
- D. Rewrites history to remove secrets.

정답: B

설명:

Secret scanning in private repositories on GitHub Enterprise Cloud lets you define and use custom regular-expression patterns - so you can detect internal or proprietary secret formats beyond the default partner-provided types.

질문 # 29

A token was used to access an organization's resource via API. What fields in the audit log help determine who used it?

- A. The token ID, requesting IP address, and associated user
- B. The token expiration date
- C. The GitHub Actions runner name
- D. The token's permissions and the geographic region of access

정답: A

설명:

The audit log records the token's identifier (the hashed_token value), the source IP address of the request, and the actor (the user or app) associated with that token, allowing you to trace exactly who used it.

질문 # 30

Which of the following GitHub token types supports fine-grained repository permissions AND is recommended for CI/CD automation?

- A. Personal Access Tokens (PATs)
- B. OAuth tokens
- C. Device Tokens
- D. GitHub App Installation Access Tokens

정답: D

설명:

GitHub App Installation Access Tokens are privileged to the exact permissions you grant the App - down to individual repositories - and rotate automatically, making them the recommended choice for CI/CD automation workflows that demand least-privilege, fine-grained access.

질문 # 31

Why would a GitHub App be favored over a machine account for automation tasks?

- A. GitHub Apps are limited to a single repository.
- B. GitHub Apps provide a higher rate limit ceiling than using a personal access token on a machine account, when they use an install token and are owned by a GitHub Enterprise Cloud licensed enterprise.
- C. Machine accounts are required for webhook delivery.
- D. Machine accounts are easier to audit than GitHub Apps.

정답: B

설명:

GitHub Apps authenticate with short-lived installation tokens scoped to fine-grained permissions and, when owned by a GitHub Enterprise Cloud organization, enjoy a higher rate limit (15,000 requests/hour) compared to a machine account's personal access token.

질문 # 32

How is CodeQL different from other static analysis tools?

- A. It only works for open-source projects.
- B. It runs analysis only after a security breach.
- C. It allows querying of code semantics using a database-like language.
- D. It removes insecure code automatically

정답: C

설명:

CodeQL differs from traditional static analysis tools by ingesting your code into a queryable database and letting you write QL queries - its own database-style language - to express semantic checks and find patterns across the codebase.

질문 # 33
