Reliable Plat-Dev-210 Real Test - 100% Pass Plat-Dev-210: Salesforce Certified Omnistudio Developer First-grade Latest Exam Materials

Prep4away Salesforce Plat-Dev-210 exam questions are compiled according to the latest syllabus and the actual Plat-Dev-210 certification exam. We are also constantly upgrade our training materials so that you could get the best and the latest information for the first time. When you buy our Plat-Dev-210 Exam Training materials, you will get a year of free updates. At any time, you can extend the the update subscription time, so that you can have a longer time to prepare for the exam.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.
Topic 2	<ul style="list-style-type: none"> • Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.
Topic 3	<ul style="list-style-type: none"> • Omniscrpts: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.

Salesforce Certified Omnistudio Developer Sample Questions (Q26-Q31):

NEW QUESTION # 26

What OmniStudio tool pre-populates the data in a PDF used by an OmniScript?

- A. A DataRaptor Extract
- B. A DataRaptor Load
- C. A SOQL Query
- **D. A DataRaptor Transform**

Answer: D

Explanation:

According to the DataRaptor Transform Overview page, a DataRaptor Transform can be used to "pre-populate data in PDFs used by OmniScripts".

NEW QUESTION # 27

Refer to the exhibit below. A developer has configured an integration Procedure element with Additional input.

Alternatively, how could the developer configure SEND/RESPONSE TRANSFORMATION to send exactly the same data?

Assume the developer has un-checked Send Only Additional input.

□

- **A.** □
- B. □
- C. □
- D. □

Answer: A

Explanation:

The Send JSON Path syntax for accessing an element from an Integration Procedure structure is BlockName.

ElementName. In this case, the BlockName is BlockX and the ElementName is ActionZ. The colon (:) is used to separate the input and output parameters, not the block and element names. The order of the block and element names should follow the hierarchy of the structure, from top to bottom. The Additional input parameter is not needed in this case, as it is already included in the Send JSON Path.

NEW QUESTION # 28

A developer creates a new FlexCard to display customer data and actions, such as updating billing information and changing the

contact for the customer account. The FlexCard contains 10 fields and 5 actions. During testing, several fields display with the correct data, but one of the fields shows only the label. What could cause this?

- A. {recordId} is misspelled in the Data Source Input Map.
- **B. The field is null on the Salesforce record.**
- C. There are no test parameters configured.
- D. The fields have exceeded the maximum number allowed on the card.

Answer: B

Explanation:

According to the FlexCard Designer Overview page, another possible cause of a field showing only the label is that "the field is null on the Salesforce record".

NEW QUESTION # 29

Refer to the exhibit below. A developer has configured an Integration Procedure element with SEND /RESPONSE TRANSFORMATIONS as shown.

Alternatively, how could the developer configure Additional Input to send exactly the same data? Assume that the developer checked Send Only Additional Input.

- A.
- B.
- C.
- **D.**

Answer: D

Explanation:

The Additional Input property allows the developer to specify additional input parameters to be sent to the Integration Procedure element. The input parameters can be specified as a JSON object or as a list of key-value pairs. If the developer checked Send Only Additional Input, then only the input parameters specified in Additional Input are sent, and the SEND/RESPONSE TRANSFORMATIONS are ignored. Therefore, the developer needs to specify the same input parameters as in the SEND/RESPONSE TRANSFORMATIONS in Additional Input. Option C shows how to do this using a JSON object with two properties: "DBExtractAction: Account" and "DBExtractAction:SecondaryAccount". The values of these properties are the same as in the SEND/RESPONSE TRANSFORMATIONS.

NEW QUESTION # 30

An OmniScript updates data from one Salesforce record, but when it completes, only some of the data is updated in Salesforce. A Data Mapper Load saves the data. What error could cause this behavior?

Choose 2 answers

- **A. The fields that are not updated are read-only in Salesforce.**
- B. In the Data Mapper Load, in the preview tab, the RecordId is from the wrong record type.
- **C. The Input JSON paths in the Data Mapper Load do not match the JSON sent from the OmniScript.**
- D. ContextId is misspelled in the merge code that passes the RecordId to the Data Mapper.

Answer: A,C

Explanation:

According to the Salesforce OmniStudio DataRaptor documentation, specifically under DataRaptor Load Best Practices and Common Issues:

* A. "The Input JSON paths in the Data Mapper Load do not match the JSON sent from the OmniScript." This is a common configuration issue. If the paths between the OmniScript's structure and the DataRaptor Load mapping are mismatched, fields may not map correctly, resulting in partial updates or no updates.

* B. "The fields that are not updated are read-only in Salesforce." If a field is Read-Only at the field-level security (FLS) or object schema, DataRaptor Load will not be able to write to it, which explains why only some data is updated.

Incorrect Options:
