NEW QUESTION 27

Universal Containers (UC) is both a Salesforce and Google Apps customer. The UC IT team would like to manage the users for both systems in a single place to reduce administrative burden. Which two optimal ways can the IT team provision users and allow Single Sign-on between Salesforce and Google Apps? Choose 2 answers

- A. Build a custom app running on Heroku as the Identity Provider that can sync user information between Salesforce and Google Apps.
- B. Use a third-party product as the Identity Provider for both Salesforce and Google Apps and manage the provisioning from there.
- C. Use Identity Connect as the Identity Provider for both Salesforce and Google Apps and manage the provisioning from there.
- D. Use Salesforce as the Identity Provider and Google Apps as a Service Provider and configure User Provisioning for Connected Apps.

Salesforce Certified Identity and Access Management Architect certification proves that the candidate has the skills and knowledge necessary to design, implement, and manage secure and scalable identity and access management solutions for Salesforce users.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q100-Q105):

NEW QUESTION # 100

Universal containers (UC) has an e-commerce website while customers can buy products, make payments, and manage their accounts. UC decides to build a customer Community on Salesforce and wants to allow the customers to access the community for their accounts without logging in again. UC decides to implement ansP-Initiated SSO using a SAML-BASED complaint IDP. In this scenario where salesforce is the service provider, which two activities must be performed in salesforce to make sp-Initiated SSO work? Choose 2 answers

- A. Configure Delegated Authentication
- **B. Set up my domain**
- C. Create a connected App
- **D. Configure SAML SSO settings.**

Answer: B,D

Explanation:

To enable SP-initiated SSO using a SAML-based identity provider, UC needs to configure SAML SSO settings in Salesforce and set up acustom domain using My Domain feature. This allows UC to specify the identity provider information, such as the issuer, entity ID, certificate, and SAML assertion attributes.

Delegated authentication is a different mechanism that allows Salesforce to delegate the authentication process to an external web service. A connected app is not required for SP-initiated SSO, but it is used for IDP-initiated SSO or OAuth flows. References: Certification - Identity and Access Management Architect - Trailhead, [Set Up My Domain], [Configure SAML Settings for Single Sign-On]

NEW QUESTION # 101

Universal Containers is implementing Salesforce Identity to broker authentication from its enterprise single sign-on (SSO) solution through Salesforce to thirdparty applications using SAML.

What rote does Salesforce Identity play in its relationship with the enterprise SSO system?

- A. Resource Server
- B. Identity Provider (IdP)
- **C. Service Provider (SP)**
- D. Client Application

Answer: C

Explanation:

To broker authentication from an enterprise SSO solution through Salesforce to third party applications using SAML, Salesforce Identity plays the role of a Service Provider (SP). A SP is an entity that relies on an Identity Provider (IdP) to authenticate and authorize users. In this scenario, the enterprise SSO solution is the IdP, Salesforce is the SP, and the third party applications are the Resource Servers or Client Applications. The SP receives a SAML assertion from the IdP and uses it to obtain an access token from the Resource Server or Client Application. References: SAML Single Sign-On Settings, Authorize Apps with OAuth

NEW QUESTION # 102

Universal Containers (UC) employees have Salesforce access from restricted IP ranges only, to protect against unauthorized access. UC wants to roll out the Salesforce1 mobile app and make it accessible from any location. Which two options should an Architect recommend? Choose 2 answers

- A. Use Login Flow to bypass IP range restriction for the mobile app.
- B. Remove existing restrictions on IP ranges for all types of user access.
- C. Relax the IP restriction with a second factor in the Connect App settings for Salesforce1 mobile app.
- D. Relax the IP restrictions in the Connect App settings for the Salesforce1 mobile app.

Answer: C,D

NEW QUESTION # 103

Universal Containers (UC) has a desktop application to collect leads for marketing campaigns. UC wants to extend this application to integrate with Salesforce to create leads. Integration between the desktop application and Salesforce should be seamless. What Authorization flow should the Architect recommend?

- A. Username and Password Flow
- B. JWT Bearer Token Flow
- C. Web Server Authentication Flow
- D. User Agent Flow

Answer: D

NEW QUESTION # 104

Universal Containers (UC) is implementing Salesforce and would like to establish SAML SSO for its users to log in. UC stores its corporate user identities in a Custom Database. The UC IT Manager has heard good things about Salesforce Identity Connect as an IdP, and would like to understand what limitations they may face if they decided to use Identity Connect in their current environment. What limitation should an Architect inform the IT Manager about?

- A. Identity Connect will only support SP-initiated SAML flows in UC's current environment.
- B. Identity Connect is not compatible with UC's current identity environment.
- C. Identity Connect will not support user provisioning in UC's current environment.
- D. Identity Connect will only support IdP-initiated SAML flows in UC's current environment.

Answer: C

Explanation:

Explanation

Identity Connect will not support user provisioning in UC's current environment. Identity Connect is a tool that synchronizes user data between Active Directory and Salesforce, but it does not work with other identity sources such as a Custom Database. Therefore, if UC wants to use Identity Connect as an IdP, they will not be able to provision users from their Custom Database to Salesforce.

Options B, C, and D are incorrect because Identity Connect does not have any limitations on the type of SAML flow or the compatibility with UC's current identity environment. Identity Connect supports both IdP-initiated and SP-initiated SAML flows, and it can act as an IdP for any external service provider that supports SAML 2.07.
